<b>Date and Time Products Delivered to Incident:</b> 10/24/2019 – 2300 (MDT)		<b>Digital files sent to: NIFC FTP @</b> /incident_specific_data/rocky_mtn/2019/CowCreek/IR/20191025	
<b>Comments /notes on tonight's mission and this interpretation:</b> I started with the previous IR perimeter: 20191021_2135_CowCreek_HeatPerimeter  There were very small movements along the perimeter, principally along the southern edge.  There continue to be numerous isolated heat sources.  There is nothing I would categorize as intense heat, but there are clumpings of scattered heat.   End – 859 Acres Start – 853 Acres (area of shapefile) Growth – 6 Acres   Questions, comments, please contact the IR interpreter via the info above.
