<p>Comments /notes on tonight's mission and this interpretation:</p> <p>I started with the file: DeckerFireDailyFirePoly_20191011_2016hrs as found on the ftp site.</p> <p>In the southwest section between a road and the Round Hill Trail, along Tree Creek there were additions to the perimeter, as well as in the Bear Creek drainage north of Simmons Peak. These are also the areas of most of the Intense Heat. Other locations around the perimeter crept here and there, and had very small pockets of intense heat. Scattered heat is common throughout the perimeter. The northern extent is continuing to cool.</p> <p>End – 7162 Acres Start –7105 Acres (area of shapefile) Growth – 57 Acres</p> <p>Questions, comments, please contact the IR interpreter via the info above.</p>
