<b>Date and Time Products Delivered to Incident:</b> 10/17/2019 – 0345 (MDT)		<b>Digital files sent to: NIFC FTP @</b> /incident_specific_data/rocky_mtn/2019/Decker/IR/20191017	
<b>Comments /notes on tonight's mission and this interpretation:</b> I started with the previous IR file: 20191015_2117_Decker_HeatPerimeter as the GISS requested.  There were no large changes to the exterior perimeter, only creeping edges in small locations. The largest of these on the far south end in the North Decker Creek watershed.  The significant changes were to the interior islands. These are continuing to have heat enter them.  End – 8570 Acres Start –8464 Acres (area of shapefile) Growth – 106 Acres  Questions, comments, please contact the IR interpreter via the info above.
