<b>Date and Time Products Delivered to Incident:</b> 10/17/2019 – 2345 (MDT)		<b>Digital files sent to: NIFC FTP @</b> /incident_specific_data/rocky_mtn/2019/Decker/IR/20191018	
<b>Comments /notes on tonight's mission and this interpretation:</b> I started with the previous IR file: 20191017_0057_Decker_HeatPerimeter as no new perimeter had been posted.  There were no large changes to the exterior perimeter, only creeping edges in small locations. The largest of these was at the far south between the North Decker Creek and the North Rock Creek watersheds.  The significant changes were to the interior islands. These are continuing to have heat enter them.  End – 8694 Acres Start –8570 Acres (area of shapefile) Growth – 124 Acres  Questions, comments, please contact the IR interpreter via the info above.
