<b>Comments / notes on tonight's mission and this interpretation:</b> Tonight's scan once again omitted the fire's northernmost edge in Div T/W south of DP-45. <b>Unmapped heat is possible in this area of no data.</b> No data areas are included in the incident shapefiles, kmz, and is clearly labeled on pdf map products. Tonight's mapping used the incident provided perimeter from the NIFS as a base. Only one acre of perimeter change was mapped, occurring in the Grizzly Creek drainage. No intense heat was mapped tonight. Scattered heat was mapped along the fire's northwestern edge in Div N. Isolated heat sources wee mapped throughout much of the fire area.
