To: All Incident Personnel, Pine Gulch 2020

As Southern Area National Type I Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

I am particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

/s/ Mike Dueitt

FACTORS INFLUENCING FIRE BEHAVIOR			
WEATHER:			
EXTREME BURNING CONDITIONS: 72 HOURS <30% RH, SINGLE DIDGET LOW RHs, HAINES INDEX MAXED for 3rd DAY IN A ROW, WIND GUSTS 30mph. See Pine Gulch Weather Forecast in IAP			
FUELS: All unburned fuels remain receptive to ignition if subjected to heat source.			
Live Woody Fuel Moisture: Oak-86%, Sage-79%, Juniper-72%			
Forecasted Min. Fine Dead Fuel Moisture Content: 4%			
Heavy Dead Fuel Moisture Content (1000hr): 5%			
Forecast ERC Saturday September 5rd: 89 (↑2)			
<i>Local Thresholds for Critical Fire Behavior: 20' Winds: >18-24 mph RH: < 15-20% Temp: >81-89° max recovery >40% 1000: <10%, ERC 7G: 90% = 91 and 80% = 85</i>			
FIRE BEHAVIOR Outputs			
GENERAL:			
<ul style="list-style-type: none"> No fire perimeter growth is expected. Heavy dead and down fuels interior will continue to burn. Smoldering and creeping fire activity will persist. Isolated pockets of fuel will continue to burn out where heat sources remain. Surface fire and very isolated single tree torching is possible. New ignitions outside of the current containment lines will have the potential for active fire spread within continuous grass/shrub fuels. If new ignitions occur with a wind event fire spread will be very rapid, with the potential for single tree torching, isolated crown fire, and short-range spotting (0.2 mi.). Stay vigilant! 			
Maximum Head Fire Rate of Spread (ROS) & Flame Length (FL) (30% slope)			
Winds	5 mph	10 mph	25 mph (Gusts)
Grass/Shrub (GS2)	ROS = 26 ft/min FL = 5 feet Spot = 0.1 mile	ROS = 65 ft/min FL = 8 feet Spot = 0.2 mile	ROS = 230 ft/min FL = 15 feet Spot = 0.6 mile
Probability of Ignition: 90%			
Potential for new starts and fire growth remains high. Fuels are still extremely dry.			
Areas of Concern			
DIV Delta/Echo			
Isolated heat sources remain in deep draws along the southern rim of the East Salt Creek main canyon, between DP-25 and H-11.			
Night: Poor night RH recoveries will provide favorable conditions for smoldering fire for most of the night. Winds will diminish in the evening, providing some moderation of any active fire.			
AIR OPERATIONS: Favorable conditions (smoke and winds) for Air Operations.			
SAFETY			
Burning roots and subsurface fuels on slopes will create voids that can cause roll out of loosened materials. Keep a heads up for rolling materials.			
Send any fire behavior observations or photos to: michaeldward@usda.gov & gregory_titus@fws.gov

IWI IC Responsibilities:

- Take charge of the scene – inform the Division Supervisor and Communications that you are the IWI IC and establish radio communications (frequencies, channels). Identify the emergency name – (Ex. Division A medical, Fish Meadows medical, Highway 21 accident.)
- Assign or begin patient assessment Medical Incident Report (MIR) and first aid. Request additional medical resources on division/branch or across incident. Transmit MIR patient information to Communications.
- Determine patient transportation through consultation with line medical personnel and Medical Unit Leader. Consider transportation time, risk to personnel, destination facility and available operational resources. If air transport is chosen, implement the plan for alternative transportation in the event aircraft cannot complete the mission. Order transportation resources through Communications as early as possible.
- Notify Communications as resources arrive and any patient status changes. Names of injured or deceased individuals will not be transmitted on the radio.
- Initiate documentation for future investigation; if a line safety officer is available, assign them to lead documentation. Do not move deceased individuals, gear or personal effects except to accomplish rescue work or protect the safety of others. Obtain written documentation of witnesses. The Unit Log, ICS 214, may be used for the initial documentation, but a subsequent narrative will be required.
- As appropriate, conduct an After Action Review to determine successes, areas to improve and lessons learned.

HEALTH AND SAFETY MESSAGE

“We don’t plan on luck to be safe, we plan on sound risk management and good decisions.” ~ The Red Team

INCIDENT: Pine Gulch	DATE: Saturday, September 5, 2020
Major Hazards & Risks: Fuel Geyser Awareness for Chainsaws	
If the chainsaw you are using stops running or is running poorly →	
STOP!!! Do Not Remove the Fuel Cap!!!	
➤ Move away from any ignition sources and look through the opaque tank to see if it has ½ tank or more of fuel, or if the chainsaw is out of fuel.	
THINK!!! What is the issue?	
➤ If it is out of fuel, then normal re-fueling procedures apply.	
➤ If there is more than ½ tank of fuel in the saw, you may be in a possible geyser condition.	
➤ Chainsaws which suddenly stop continue to build heat – start the “Hot Saw Start Procedure” ASAP.	
ACT! Use the “Hot Saw Start Procedure”	
➤ Chainsaws are air cooled and will continue to heat up once they stop suddenly	
○ Close Choke	
○ Pull starter rope until saw fires, or up to 20 times maximum	
○ If saw fires, place choke in “start” position	
○ Pull starter rope until saw starts or up to 10 times maximum	
○ If the saw starts, - keep it running! Once it has cooled to normal operating temperature, the saw should run normally.	
○ If the saw does not start, discontinue use.	
○ Place in shade and let cool	
Anytime you remove the fuel cap, expect a pressurized tank and possible geyser!	
○ Move away from any ignition points	
○ Wear all PPE including safety glasses (No Bug Eyes)	
○ Cover the cap with a rag to deflect any fuel.	
○ Open slowly <i>expecting the fuel to geyser</i>	
If you experience a Geyser with or without injury:	
Report the incident – https://www.nwcg.gov/committees/equipment-technology-committee/fuel-geyser-incident-reporting-form	
● Collect a sample of the fuel if possible	
● Record weather conditions (Temperature and Relative Humidity)	
● Document the condition leading up to the event.	

Thank you for your time and consideration

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>	
Nature of Injury or Illness & Mechanism of Injury		Brief Summary of Injury or Illness <i>(Ex: Unconscious, Struck by Falling Tree)</i>
