To: All Incident Personnel, Pine Gulch 2020

As Southern Area National Type I Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

I am particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

/s/ Mike Dueitt

FACTORS INFLUENCING FIRE BEHAVIOR

WEATHER:

Near Red-Flag conditions! See Pine Gulch Weather Forecast in IAP

FUELS:

All unburned fuels remain receptive to ignition if subjected to heat source.
 Live Woody Fuel Moisture: Oak-86%, Sage-79%, Juniper-72%
 Forecasted Min. Fine Dead Fuel Moisture Content: 2%
 Heavy Dead Fuel Moisture Content (1000hr): 5%
 Forecast ERC Sunday September 6th: 92 (↑3)

Local Thresholds for Critical Fire Behavior: 20' Winds: >18-24 mph RH: < 15-20% Temp: >81-89° max recovery >40% 1000: <10%, ERC 7G: 90% = 91 and 80% = 85

FIRE BEHAVIOR Outputs

GENERAL:

- No fire perimeter growth is expected. Heavy dead and down fuels interior will continue to burn.
- Smoldering and creeping fire activity will persist. Isolated pockets of fuel will continue to burn out where heat sources remain. Surface fire and isolated single tree torching is possible.
- New ignitions outside of the current containment lines will have the potential for active fire spread within continuous grass/shrub fuels. If new ignitions occur with a wind event fire spread will be very rapid, with the potential for single tree torching, isolated crown fire, and short-range spotting (0.2 mi.). Stay vigilant!

Maximum Head Fire Rate of Spread (ROS) & Flame Length (FL) (30% slope)

Winds	5 mph	10 mph	25 mph (Gusts)
Grass/Shrub (GS2)	ROS = 26 ft/min FL = 6 feet Spot = 0.1 mile	ROS = 69 ft/min FL = 9 feet Spot = 0.2 mile	ROS = 245 ft/min FL = 15 feet Spot = 0.6 mile Ridgetop

Probability of Ignition: 100%

Potential for new starts and fire growth remains high. Fuels are still extremely dry.

Areas of Concern

DIV Alpha

Isolated heat sources identified in the “Bowtie” area, south of DP-31. Any unburned fuels in this area will be receptive to active fire behavior. Unburned fuels to the north of the area have the potential for significant fire growth if fire moves into these fuels.

DIV Delta/Echo

Isolated heat sources remain just north of the division B/D break, along Hwy 139, south of DP-25. Any unburned fuels in this area will be receptive to active fire behavior. No fire outside the current containment is expected as the area appears to be secure due to Hwy 139 and previous burn operations.

Night

Poor night RH recoveries will provide favorable conditions for active fire for most of the night.

AIR OPERATIONS: Favorable conditions (smoke and winds) for Air Operations.

SAFETY

IWI IC Responsibilities:

- Take charge of the scene – inform the Division Supervisor and Communications that you are the IWI IC and establish radio communications (frequencies, channels). Identify the emergency name – (Ex. Division A medical, Fish Meadows medical, Highway 21 accident.)
- Assign or begin patient assessment Medical Incident Report (MIR) and first aid. Request additional medical resources on division/branch or across incident. Transmit MIR patient information to Communications.
- Determine patient transportation through consultation with line medical personnel and Medical Unit Leader. Consider transportation time, risk to personnel, destination facility and available operational resources. If air transport is chosen, implement the plan for alternative transportation in the event aircraft cannot complete the mission. Order transportation resources through Communications as early as possible.
- Notify Communications as resources arrive and any patient status changes. Names of injured or deceased individuals will not be transmitted on the radio.
- Initiate documentation for future investigation; if a line safety officer is available, assign them to lead documentation. Do not move deceased individuals, gear or personal effects except to accomplish rescue work or protect the safety of others. Obtain written documentation of witnesses. The Unit Log, ICS 214, may be used for the initial documentation, but a subsequent narrative will be required.
- As appropriate, conduct an After Action Review to determine successes, areas to improve and lessons learned.

HEALTH AND SAFETY MESSAGE

“We don’t plan on luck to be safe, we plan on sound risk management and good decisions”....the Red Team

INCIDENT: Pine Gulch Fire	DATE: Sunday, September 6, 2020
Major Hazards & Risks:	Driving, Oil & Gas, Steep Slopes & Covid 19
Facts About Dehydration: <ul style="list-style-type: none">• Most heat illnesses are caused by dehydration.• A person can sweat about a liter an hour doing heavy work.• Most workers exposed to hot conditions drink less fluid than needed because their thirst response is insufficient and lags behind the actual level of dehydration.• By the time a person is thirsty, he or she is already two to three percent dehydrated. Once this occurs, it’s difficult to make up for the lost hydration.	
Symptoms That Require Emergency Care Include: <ul style="list-style-type: none">• Altered behavior, such as severe anxiety, confusion, or not being able to stay awake.• Faintness that is not relieved by lying down, or light headedness that continues after standing for 2 minutes.• Weak, rapid pulse. Cold, clammy skin or hot, dry skin.• Little or no urination.• Loss of consciousness.	
Good Indicator of Dehydration – Urine Color: <ul style="list-style-type: none">• The darker the color of urine, the more dehydrated the person is.• Normal colored urine is pale yellow.• The urine of a person who is a bit dehydrated is bright yellow. The person should drink at least a cup of water or two.• The urine of a person who is very dehydrated is orange. The person should drink at least a liter of water or more.	
Prevention of Dehydration: <ul style="list-style-type: none">• Drink 8 to 10 glasses of water each day.• Sports drinks (Gatorade or Powerade) are also good rehydration choices.• Stop working outdoors or in the heat at the first sign of dizziness, lightheadedness, or fatigue. Move to the shade or an air-conditioned space.• Drink before, during and after physical labor to replace body fluid lost through perspiration.
