

Sugarloaf Fire

WY-MRF-220267

Monday, August 1st – 2nd, 2022

Operational Period

Day 0700-1900, Night 1800-1000

Safety Starts Here

- ~ Assess your new work environment! Is LCES in place? Are communications solid before engaging?
- ~ When aviation assets are working in your area, make sure you are aware of the hazards they create. Have communications with the pilot when working directly with the aircraft.
- ~ Never underestimate Mother Nature! Even highly trained and very experienced firefighters (you) can underestimate fire behavior, keep an eye on the weather.
- ~ While performing strategic suppression activities, be assertive in speaking up to your supervisor and expressing your thoughts about any safety concerns you may have.
- ~ Review the Medical Incident Report and IWI procedures, so you are prepared to use them.

Today's Safety Challenge:

Which of the Aviation Watch Out Situations are different than the 18 Watch Outs?

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 4	TYPE OF FIRE: Wildfire
FIRE NAME: Sugarloaf	OPERATIONAL PERIOD: 8/1/2022 Day
DATE ISSUED: 7/31/2022	TIME ISSUED: 2000
UNIT: Medicine Bow National Forest	SIGNED: David Greathouse Typed/printed: David Greathouse - FBAN

WEATHER:

*****Warm, Dry and Breezy*****
See fire behavior forecast for details

Weather Threshold's That Shout WATCH OUT (Per Laramie FDRA Pocket card)

Temperatures greater than 75°, relative humidity less than 15%, 20' winds greater than 15mph

FUELS:

Division A – The fuels consist of open stands of juniper at the lower elevations transitioning to more Ponderosa Pine with scattered Aspen groves at the higher elevations. Sagebrush and short grass along with pockets of heavy dead and down can be found on the surface.

Division Z – The fuels consist of a mixed stand of Subalpine Fir, Lodgepole, Ponderosa and Aspen with heavy loads of dead and down material on the surface. In the open areas, sagebrush and grass are present. Grasses and forbs can be found along Cow Creek.

Scattered areas of dead standing timber can be found on both divisions

Fuel conditions have moderated since reaching historic highs a week ago. The current ERC-Y is in the 70th percentile, which is just above average for this time of year. However, the 100- and 1000-fuel moisture content are at 13% and 12% respectively. At these moistures, expect the Sagebrush and heavy fuels to contribute to fire intensity

FIRE BEHAVIOR:

General:

Another warm, dry day will allow fire behavior to be active in areas still holding heat. Expect light to moderate surface fire activity in the heavy fuels. Single tree and or group tree torching can be expected. If roll out occurs and the fire becomes established, short uphill runs are possible.

Maximum Surface Fire Potential
(Head fire, upslope @ 45%, winds upslope)

Rate of Spread	Flame Length	Probability of Ignition
3-6 ch/hr	3-6'	80% - 100%

AIR OPERATIONS:

Gusty outflow winds, hail and lightning could hamper air operations in the afternoon

SAFETY:

"It's the little details that are vital. Little things make big things happen"
-John Wooden
