Safety Starts Here

TEN QUESTIONS EVERY FIREFIGHTER MUST ASK AND ANSWER YES TO BEFORE ENGAGING IN FIRE SUPPRESSION

1. Do you understand the organization for this fire and your place in it?
2. Is there a plan and do you understand it?
3. Do you know it is OK to ask questions to ensure that the instructions you are given provide for your safety and the safety of your fellow firefighters?
4. Do you know the weather forecast for today?
5. Have you assessed fire behavior and made a prediction?
6. Are you interactive with the Standard Fire Orders and Watch Out Situations?
7. Do you have the Lookouts, Communications, Escape Routes, and Safety Zones
8. Do you understand that it is both your responsibility and your right to say no to orders that cannot be accomplished without compromising one or more of the Standard Fire Orders or without mitigating each of the Watch out Situations?
9. Can you describe the fire environment you are going to operate in?
10. Are you prepared to engage, monitor the fire environment, be proactive, and make adjustments?

"Always leave yourself a way out."

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 5	TYPE OF FIRE: Wildfire
FIRE NAME: Sugarloaf	OPERATIONAL PERIOD: 8/2/2022
DATE ISSUED: 8/1/2022	TIME ISSUED: 2000
UNIT: Medicine Bow National Forest	SIGNED: David Greathouse Typed/printed: David Greathouse - FBAN

WEATHER:

*****Strong Gusty Winds as a Cold Front Approaches*****

See fire behavior forecast for details

Weather Threshold's That Shout WATCH OUT

(Per Laramie FDRA Pocket card)

Temperatures greater than 75°, relative humidity less than 15%, 20' winds greater than 15mph

FUELS:

Division A – The fuels consist of open stands of juniper at the lower elevations transitioning to more Ponderosa Pine with scattered Aspen groves at the higher elevations. Sagebrush and short grass along with pockets of heavy dead and down can be found on the surface.

Division Z – The fuels consist of a mixed stand of Subalpine Fir, Lodgepole, Ponderosa and Aspen with heavy loads of dead and down material on the surface. In the open areas, sagebrush and grass are present. Grasses and forbs can be found along Cow Creek.

Scattered areas of dead standing timber can be found on both divisions

Fuel conditions are starting to rebound. The current ERC-Y has rebounded back to the 90th percentile, which is above average for this time of year. With the predicted weather today. This could be short lived. The last live fuel moisture measured in Sagebrush was 122%, and the 100- and 1000- fuel moisture content are at 13% and 12% respectively. At these moistures, expect the Sagebrush and heavy fuels to contribute to fire intensity

FIRE BEHAVIOR:

General:

Predicted cooler temperatures, higher minimum relative humidity's will work in our favor tomorrow, however predicted winds may become problematic, at least until the fire line of showers come through in the afternoon. Expect areas of unburned pockets in DIVZ to continue to see surface fire with single tree and or group tree torching. Pay attention to the handline on the southeast side. With the forecasted winds, spotting could still be a problem. DIVA will continue to see creeping and smoldering in the heavy fuels.

AIR OPERATIONS:

Gusty winds could hinder air operations today

SAFETY:

Stay alert, don't become complacent! Small changes in fuel and weather conditions can equal big changes in fire behavior.
