FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 8

TYPE OF FIRE: Wildfire

FIRE NAME: Sugarloaf

OPERATIONAL PERIOD: 8/5/2022

DATE ISSUED: 8/4/2022

TIME ISSUED: 2000

UNIT: Medicine Bow National Forest

SIGNED: David Greathouse

Typed/printed: David Greathouse - FBAN

WEATHER:

*****Wetting Rains Likely over the next 48 hours*****

See fire behavior forecast for details

Weather Threshold's That Shout WATCH OUT

(Per Laramie FDRA Pocket card)

Temperatures greater than 75°, relative humidity less than 15%, 20' winds greater than 15mph

FUELS:

Division A – The fuels consist of open stands of juniper at the lower elevations transitioning to more Ponderosa Pine with scattered Aspen groves at the higher elevations. Sagebrush and short grass along with pockets of heavy dead and down can be found on the surface.

Division Z – The fuels consist of a mixed stand of Subalpine Fir, Lodgepole, Ponderosa and Aspen with heavy loads of dead and down material on the surface. In the open areas, sagebrush and grass are present. Grasses and forbs can be found along Cow Creek.

Scattered areas of dead standing timber can be found on both divisions

The current ERC-Y is tracking just above the 90th percentile, above average for this time of year. The last live fuel moisture measured in Sagebrush was 122%, and the 100- and 1000- fuel moisture content are at 13% and 12% respectively. At these moistures, expect the Sagebrush and heavy fuels to contribute to fire intensity

FIRE BEHAVIOR:

General:

Unburned pocket of fuel will continue to burn out on in unburned interior pockets. Surface fire with an occasional torching tree may be observed as this happens. Other areas of the fire will see minimal fire behavior, mainly creeping and smoldering in the heavy fuels.

AIR OPERATIONS:

Weather nor fire behavior will affect air operations today

SAFETY:

"Adopt the pace of nature: her secret is patience."

-Ralph Waldo Emerson
