

### CO-GMF-000176 - P2 QFT2 (0204)[P]

# WEDNESDAY, AUGUST 9, 2023 – FRIDAY, AUGUST 11, 2023

Day Operational Period 0700 - 2100

## Brian Gaines, IC Theo Engel, IC(t)

INCIDENT INFORMATION: 970.648.4470

IAP & MAPS

DEMOB

#### INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period: DAY				-
LOWLINE	Date/Time From:		Date/Time To:		
	08/09/2023 0700 WE	D	08/11/2023 2100	FRI	

#### 3. Objective(s):

#### **OBJECTIVES FOR FIREFIGHTER AND PUBLIC SAFETY**

Safety of Firefighters and the public will be the highest priority throughout all phases of the incident. Manage the risk to fire fighters and the public by utilizing a risk-based approach to decision making. Ensure quality tradeoff conversations occur with Agency Administrators, partners, and stakeholders.

#### **OBJECTIVES FOR PROTECTION OF VALUES AT RISK**

Utilize appropriate fire strategies to minimize fire impacts on residences, commercial properties, critical community infrastructure to reduce the potential for adverse health, social, financial, and economic hardships. These include:

• Structures within the planning area including but not limited to Wilderness Streams, isolated ranches and private properties along CR730, Mill Creek, and Eagle Ridge Ranch.

- Critical Gunnison Sage Grouse Habitat
- · Critical water infrastructure resources (reservoirs, dams, ditches)
- Cultural and historical resources including but not limited to Castle Creek Cow Camp
- · Agricultural and Ranching Operations
- Antelope Timber Sale

#### **OBJECTIVES FOR INFORMATION AND RELATIONSHIPS**

Maintain and enhance relationships with cooperators, stakeholders, the local community and adjoining agencies through effective and timely communication, engagement and information sharing. Consider operational strategies that minimize the impact of smoke to sensitive areas and receptors by adjusting tactics, monitoring smoke impacts, and following guidance in state smoke management plans and coordinating with state and local Air Quality Control Commission.

#### 4. Operational Period Command Emphasis:

1. Manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when values threatened warrant it and the probability of achieving objectives is high.

2. Utilize strategies and tactics that commit responders only to operations where and when they can be successful, and under conditions where important values at risk are protected with the least exposure necessary.

3. Contain and control portions of the fire that are a threat to identified values to be protected.

4. Mop-up to the extent necessary to prevent escape of the fire and additional spread or damage to other values within the perimeter.

Implement practices that reduce the potential for spread of infectious disease, such as distributed operations, adhering to CDC guidelines and other actions that improve the health environment for firefighters and support personnel.

General Situational Awareness:

- 1. Complete a good size up of your work area to mitigate hazards.
- 2. Be prepared for changing weather conditions.
- 3. Minimize firefighter exposure to falling tree hazards.
- 4. Know who you are working for.

#### **INCIDENT Weather Forecast**

Forecast No: 13 Prediction For: Wednesday Shift Date: August 09, 2023 Forecast Issued: August 08, 2023 at 1200

Name of Incident: Lowline Unit: GMUG NF Incident Meteorologist: Scott Stearns (208) 577-1617

Discussion: Winds will relax today versus previous days along with higher RHs as moisture approaches the region from the southwest. Expect sunny skies today, followed by increasing cloud cover as we move into tomorrow. On Thursday, afternoon chances for showers and thunderstorms will impact the area (likely initiating down valley from the fire). However, gusty outflow winds appear more likely than any wetting rainfall potential.

Forecast for Today:							
Sky/Weather:			Sunn	У			
	Castleton Ra	nch 8,400'			W Elk Wilde	r. 10,000'	
Max Temperature:		75			5	72	°F
Min RH:		22				24	%
Wind (20 FT):	Expect a more	derate mornin	inversion	to brea	k around 1030		
	NW	15			W	15	mph
	Gusts:	25			Gusts:	25	mph
Mixing Height:		8,500				7,500	ft AGL
LAL:		1				1	
Chance of Precipitation:		10				10	%
Tonight's Min Temperature:	1	43				44	°F
Tonight's Max RH:		65				55	%
Tonight's Wind (20 FT):	Expect the e	vening inversi	on to begin	setting	in around 1930		
	DS/DV	10			DS/DV	4	mph
	Gusts:	18			Gusts:	8	mph
Tonight's Mixing Height:		2,500				2,500	ft AGL
Tonight's LAL:		1				1	
Tonight's Chnc of Precip:		5				5	%
Forecast for Thursday:							
Sky/Weather:	N	lostly sunny; p	ossible afte	ernoon	thunderstorms		
	Castleton Ra				W Elk Wilde	r. 10,000'	
Max / Min Temperature:		44			71	45	°F
Min / Max RH:	32	90			37	80	%
Wind (20 FT):	Expect a mod	derate mornin	g inversion	to brea	k around 1030		
		15			W	15	mph
	Gusts:	23			Gusts:	25	mph
Mixing Height:		10,500				10,000	ft AGL
			LAL:	2	Proci	p Chance	35

Extended

Cloud cover and precipitation chances continue through the weekend. However, storms with lightning and outflow winds will initially be more likely than wetting rainfall. Outlook:

		Max T	Min T	Min RH	Max RH	Ridge Winds @ 1500	Weather
9,600'	Fri:	73	45	35	80	W @ 13 G23	chance showers / storms
9,600	Sat:	75	47	37	80	W @ 11 G18	chance showers / storms
	Sun:	74	46	37	80	W @ 11 G18	chance showers / storms

Fire E	Sehavior Forecast # 12
Name of Incident: Lowline	Administrative Unit: CO-GNF
Date & Time Issued: 08/07/2023 2000	Operational Period: Day – August 08-10, 2023
FBAN Glen Lewis	Signed: Glen Lewis
	Weather Summary
**See attache	ed weather forecast for details**
Fuels ar	nd Topography Summary

Fuels in the fire area are primarily composed of *Timber with Understory* (Mixed Conifers with litter and reprod), *and Grass with Shrubs* (perennial grasses mixed with brush). Heavy fuel concentrations are common in timbered areas and will likely contribute to surface fire transition to vegetation crowns, increased spotting potential, and rolling material on steep slopes. Local fire danger indices have been and continue to trend well above average. Live fuels are primarily grass and sage, and various herbaceous plants in the understory of the aspen stands.

Local fire danger indices are above average, with the Burning Index (BI) near the 95<sup>th</sup> percentile, indicating a high probability of rapid rates of spread. Fire danger will increase over the first two days and then have a mild reduction as winds reduce and more moist air moves in.

Fire area topography include alpine areas, slopes ranging from steep to rolling, and multiple deep drainages with all aspects represented. Elevations in the immediate fire area range from 7,000 to over 11,000 feet.

Watch for significant topographic influences and conditions that promote falling snags.

**Fire Behavior Summary** 

#3 Day Forecast for August 9-11, if conditions change from weather forecast, re-evaluation will be needed

#### **GENERAL:**

Poor recovery overnight will start the days in the forecast with low fuel moisture which will continue to drop throughout the day on Wednesday and Thursday.

Live fuels--particularly sagebrush are at or near the threshold where fires will spread readily through them under high winds. Grass and sage is carrying fire under higher wind speeds, and is receptive to spot fires. There is some variation on fuel moisture on a micro scale so some areas will burn more intensely than other in these fuels. All fuel moisture is still trending downward. Poor overnight recovery will start the days off with low fuel moisture and fuels will continue to dry out rapidly as the sun comes out and the inversion breaks. The increased high cloud cover will not be enough to affect fire behavior in a significant way. By Friday, higher moisture and lower winds will reduce potential fire behavior substantially.

Expect interior unburned islands to continue to burn, with torching, group torching and the associated ember lofting that will start spot fires when they land on receptive fuels. Winds will be strong but generally favorable to blow the embers back into the black, although some minor shifts in the winds throughout the burning periods will have the potential to spread embers outside the line.

There are hot spots along the western edge of the fire, but they are limited and do not have a lot potential for substantial spread. These hotspots are located in mixed conifer but adjacent aspen stands continue to resist fire spread through them. In some locations there are small stringers of mixed conifer that may allow the fire to spread around or through the aspen stands with microshifts in the wind that can affect fire spread in those areas.

Along the northern area of the fire and in the conifer stringers stretching to the east, previously unburned pockets and areas that had spotty fire spread will continue to burn actively until fuels are consumed.

### LOWLINE FIRE SUPPRESSION REPAIR PLAN

#### **Mop-Up Specifications**

- Achieve 100% mop-up along and inside the fire perimeter to a distance that is adequate to ensure the perimeter is secure to prevent the fire from escaping or spotting across existing containment lines.
- Mop-up should be implemented to the degree and in locations necessary to make the likelihood of the fire escaping the containment perimeter highly unlikely through the rest of the fire season. Mop up is not based on a set distance in from the fire perimeter.
- Mop up is based on predictable potential threats to the containment lines based on experience, terrain, fuel types, the current and anticipated future fuel conditions, and consultation with the local unit. The use of infrared mapping should also be considered to identify interior heat.
- Fall snags and hazard trees that pose "imminent" danger along all open roads within the fire perimeter.
- Any spot fires outside the control lines will be 100% mopped up, a route to them will be flagged, and the perimeter of spots mapped in ArcGIS Field Maps.

#### Suppression Repair Standards

Strategic Objectives:

- 1. Minimize future surface and gully erosion.
- 2. Minimize sediment delivery to stream channels.
- 3. Restore conditions to pre-fire drainage patterns .
- 4. Minimize potential loss of soil productivity in cleared areas.
- 5. Minimize the introduction or spread of noxious weed infestations.
- 6. Dispose of hazardous concentrations of suppression activity slash.
- 7. Repair and rehabilitate known sensitive areas affected by suppression activities to minimize further damage and exposure.
- 8. Repair and rehabilitate all facilit ies and improvements affected by suppression activities (fences, troughs, cattle guards, corrals, developed camping areas, trailheads, bridges, guardrails, etc.).
- 9. Prevent unauthorized motorized use of fire suppression features. Fire lines should be blocked with available materials . When no adjacent materials exist, harvest appropriate sized trees large enough to block access.
- 10. Identify key strategic firelines, facilitate future ingress/egress of suppression equipment and personnel on these features.
- 11. Remove and dispose of all incident-related waste.
- 12. Mitigate potential hazards to life and safety .

#### General Standards:

1. Remove signs, flagging, trash and other materials from all staging areas and drop points, dozer lines, etc. Clean all trash thoroughly from Castleton Ranch Base Area, Spike Camp, and ICP.

- 2. Cut and scatter slash piles within sight of all structures and roads.
- 3. Repair range improvements (e.g., fences) damaged in the course of suppression activities.

Dozer Line:

- 1. Use a tracked excavator with a thumb or similar equipment to pull berms and redistribute soil and woody debris on all constructed dozer line. A motor grader may be used in areas with low slopes and very moderate terrain.
- 2. For firelines on slopes greater than 15%, construct waterbars at a 30 to 45 degree angle to the fireline . Waterbar locations should be selected based on their ability to minimize drainage onto downslope burned areas.
- 3. READs will inspect and approve final rehab of dozer lines.

Hand Line:

- 1. Pull in soil berms.
- 2. Scatter branches, logs, rock, or other material in the hand line to further retard soil movement. Strive to achieve a minimum of 50-60% ground cover.
- 3. For firelines on slopes greater than 20%, construct wat erbars at a 30 to 45 degree angle to the fireline. Waterbar locations should be selected based on their ability to minimize drainage onto downslope burned areas.

Safety Zones, Helispots, and Drop Points:

- 1. All areas of concentrated fire suppression activities should be repaired to a condition that is as close to pre-fire conditions as reasonably possible.
- 2. Using a seed mix provided by a READ, seed areas disturbed by suppression activities as needed .

Site-Specific Standards:

Where the Lowline or other trails were used as a mixed fire line, work with a READ to return trail to trail management objectives (TMO) and remove hazard trees.

Infrastructure Damage:

The IMT should provide a list of known infrastructure damage including but not limited to signs, gates, cattle guards, culverts, etc.

#### Private Property

On private land the IMT should utilize this plan to conduct necessary repairs directly related to fire suppression actions. Any repair or rehabilitation beyond direct fire suppression repair will generally be negotiated between the respective County or Colorado Division of Fire Prevention and Control representative and private landowners; however, READs are available to offer advice.

### **FINANCE PROCEDURES**

Finance Email: 2023.lowline.finance@firenet.gov

ALL RESOURCES – When emailing, <u>please include your RO# in the subject line</u> and on all documents. Provide a contact phone number in your email. Include only *ONE* resource's information per email.

At check-in submit the following:

- Resource Order
- Manifest/Roster
- Cooperator agreement or contract (w/ correct resource highlighted)
- AD Casual Hire Form
- Vehicle Inspection Form

**Daily** submit the following:

- CTRs
- Shift Tickets

Finance will be located at the fairgrounds beginning Wednesday morning.

Overhead & Crews: Use TIME in subject line of email or QR code below

Contractors & Cooperators: Use PROC in subject line of email or QR code below

Send all Claims directly to: walker loren@yahoo.com

## DEMOB PROCEDURES

After being notified by your supervisor of your tentative release date:

Step 1. Return all supplies, radios, etc. that were checked out.

<u>Step 2</u>. All vehicles that have been on the fireline **MUST** go through weed wash prior to completing Demob Inspection.

<u>Step 3</u>. Submit final time documents electronically to Finance per directions in the IAP. Provide a valid email address. Finance will post your time, let you review a draft, and send your final documents to you, all electronically.

<u>Step 4</u>. Complete Demob Checkout Form using QR code at the bottom of this page. Once you submit the form, you are released from the incident and may begin travel home. You do not need to physically come to Demob. Safe Travels!

QR CODE

#### FIRE MANAGEMENT STRATEGIES

- A full suppression fire is one that is fought directly, providing the risk to firefighter safety is acceptable, or indirectly in areas where firefighters can actively suppress the fire on their terms at a lower risk to their safety.
- A wildfire burns at different levels of intensity creating a mosaic pattern as it leaves some areas totally burned, partially burned, or not burned at all inside the fire perimeter.
- Remote and rugged terrain in the wilderness poses a high risk to firefighter safety. If the fire burns into the wilderness, we will right-size for the situation and utilize natural fire breaks and the weather to help suppress the wilderness portion of the fire over a longer time with fewer people.
- Confinement as a fire management strategy means restricting fire to an area, primarily through use of natural barriers or topographic features, that are expected to limit the spread of the fire under the current and forecasted weather conditions.

#### POST-FIRE HAZARDS FOR HOMEOWNERS AND RANCHERS

There are several post-fire hazards homeowners and ranchers should be aware of when fire has passed over or near their property.

- Hoselays and sprinklers may be found on your property. They will remain in place as a precaution and removed at a later time. Please do not move or alter in any way. If you have any questions or concerns, call the Fire Information Number at 970-648-4470.
- Be careful when walking near severely burned trees or stumps. Fire can burn into the root system and maintain a lot of heat over a long period of time causing the ground to be unstable. Stepping into one of these "stump holes" can cause severe burns.
- Be alert of fire-damaged trees, especially on windy days. Fire can damage a tree's root systems making it unstable and depending on how badly burned, can fall over with or without gusty high winds.
- Standing beetle-killed trees damaged further from the fire can be especially hazardous.

#### Major Hazards and Risks:

- MEDICAL EMERGENCIES & COMMUNICATIONS- Do you know what to do in case of a medical emergency? Review the Medical Incident Report at the end of your IRPG or the IAP. Know who you will request transport resources from and on what frequency. Your actions may be what save a life.
- DRIVING Spike camp does not exist anymore, travel to and from the fire will be occurring during early morning and late evening. Wildlife is in the area too so watch for deer, elk, and cattle. Heavy Machinery associated with cutting and bailing hay may be on CR 730.
- SNAGS & FIRE WEAKENED TREES The strategy of this fire from day one has always been stay out of the snags. Now there are fire weakened trees along with snags throughout the burn area. Look up, look down, and around. Be especially alert if the wind picks up due to outflow winds.
- FINE FUELS ARE DRYING OUT Poor humidity recovery has been occurring for several days, grass and sage is becoming receptive. Expect this trend to continue into the future.
- MISSION CREEP If your assignment does not have purpose and meaning or does not support meeting the objectives, you should re-access the assignment.
- RISK MANAGEMENT- This is our primary means of maintaining safe wildfire operations. Consistently evaluate your actions and do not hesitate to adjust as environmental and human factor conditions change. If your assignment does not have purpose and meaning and does not support meeting the objectives, you should re-access the assignment. Review Risk Management Process in your IRPG, page 1. Look for opportunities that provide a high probability of success, while limiting risk and exposure.

### Safety First, Every Incident, Every Time Fight Fire Safely!
