INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period: DAY	
LOWLINE	Date/Time From: 08/02/2023 0700 WED	Date/Time To: 08/02/2023 2100 WED
3. Objective(s):		
OBJECTIVES FOR FIREFIGHTER AND PUBLIC SAFETY		
Safety of Firefighters and the public will be the highest priority throughout all phases of the incident. Manage the risk to fire fighters and the public by utilizing a risk-based approach to decision making. Ensure quality tradeoff conversations occur with Agency Administrators, partners, and stakeholders.		
OBJECTIVES FOR PROTECTION OF VALUES AT RISK		
Utilize appropriate fire strategies to minimize fire impacts on residences, commercial properties, critical community infrastructure to reduce the potential for adverse health, social, financial, and economic hardships. These include:		
<ul style="list-style-type: none"> • Structures within the planning area including but not limited to Wilderness Streams, isolated ranches and private properties along CR730, Mill Creek, and Eagle Ridge Ranch. • Critical Gunnison Sage Grouse Habitat • Critical water infrastructure resources (reservoirs, dams, ditches) • Cultural and historical resources including but not limited to Castle Creek Cow Camp • Agricultural and Ranching Operations • Antelope Timber Sale 		
OBJECTIVES FOR INFORMATION AND RELATIONSHIPS		
Maintain and enhance relationships with cooperators, stakeholders, the local community and adjoining agencies through effective and timely communication, engagement and information sharing. Consider operational strategies that minimize the impact of smoke to sensitive areas and receptors by adjusting tactics, monitoring smoke impacts, and following guidance in state smoke management plans and coordinating with state and local Air Quality Control Commission.		
4. Operational Period Command Emphasis:		
<ol style="list-style-type: none"> 1. Manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when values threatened warrant it and the probability of achieving objectives is high. 2. Utilize strategies and tactics that commit responders only to operations where and when they can be successful, and under conditions where important values at risk are protected with the least exposure necessary. 3. Contain and control portions of the fire that are a threat to identified values to be protected. 4. Mop-up to the extent necessary to prevent escape of the fire and additional spread or damage to other values within the perimeter. 5. Implement practices that reduce the potential for spread of infectious disease, such as distributed operations, adhering to CDC guidelines and other actions that improve the health environment for firefighters and support personnel. 		
General Situational Awareness:		
<ol style="list-style-type: none"> 1. Complete a good size up of your work area to mitigate hazards. 2. Be prepared for changing weather conditions. 3. Minimize firefighter exposure to falling tree hazards. 4. Know who you are working for.

Discussion: Best chances for wetting rainfall have now passed. However, the potential is not gone completely. Given the moist surface conditions, outflow winds are expected to be relatively weak (up to 25 mph). Expect mainly light, terrain-driven winds outside of any showers / storms. Best chances for precipitation will occur between 1200-1500 with another lesser chance between 2100-2400. The majority of moisture will move out of the area by Thursday but lingering storms cannot be ruled out.

INPUTS

WEATHER SUMMARY:

Forecasted temperatures in the low to mid 70s. Lightning Activity Level of 3 below 8400', above 10,000' LAL of 4, afternoon thunderstorm activity will bring a chance of wetting rain, however less of a chance and less precipitation amounts than previous shifts. Light winds from the west around 8 mph, with stronger outflow winds from thunderstorms. Daytime humidity around 40%. Inversion is expected to lift around 10:30. Cloud cover of 50% at 15:00.

Warmer and drier conditions are expected to develop by Friday, continuing into next week. Saturday has a 50/50 chance for red flag issued. Afternoons will be becoming sunnier with less cloud cover.

FUELS SUMMARY:

Fuels in the fire area are composed of timber with understory (mixed conifers with litter and reprod), as well as grass with shrubs (perennial grasses mixed with brush). Heavy fuel concentrations of standing red needle snags and large down dead are common in timbered areas. It is likely for fire to spread in surface dead and down fuels by holding heat thru wetting events, being receptive to fire brands increasing spotting potential, being a ladder fuel for fire to climb into crowns as well as potential to be rolling material on steep slopes.

Live surface fuels of grass and sage are in green up conditions, have high fuel moisture content, are not available to burn with intensity, will prohibit fire spread by acting as a heat sink.

Local fire danger indices have been trending downward; however, values are above average and expected to start increasing as fuels dry. Fire danger will increase during the warm and dry weather in coming days.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Majority of fine dead fuels are expected to have fuel moisture content that limits their energy release. Fire behavior is expected to be similar to yesterday, mostly smoldering and some creeping. Bigger heavier fuels will continue to hold heat and smolder. Fire rates of spread, spread potential, and spotting distance will be limited for most of the operational shift. As skies clear up, solar heating will wake up areas of heat. Burn periods will be increasing in length each day.

SPECIFIC:

Along the perimeter expect isolated areas of smoldering and creeping fire, with slight possibility of a torching snag.
After the inversion lifts, any interior green areas could have flanking, backing, moderate surface fire intensity, torching and spotting as solar radiation dries out fuels making them available to burn.

Geology of the West Elk Mountains

The landscape of the West Elks and Ohio Creek Valley was formed by heavy erosion of volcanic activity occurring approximately 20-30 million years ago. The West Elk Mountain Volcano (area A) was estimated to be over 17,000 feet in elevation. Past volcanic activity has produced long lava flows in the area. Ridges have been crumbled and carved by wind and water into fantastic turrets, pinnacles, and crenellated bulwarks. The topography is reflected in many of the area's geographic names: Castle Pass, Castle View, Castle Creek, and the Castles. Nearby (area B) are the world's largest clusters of laccoliths (non-surfacing magma intrusions). The basin's topography causes bitter winter weather by creating slow flow cold air inversions. The process starts because thinner and dryer air absorbs less heat from ground radiation. The colder air sinks down from mountains into the basin's wide valley. The cold flow picks up speed as it funnels down the narrow Gunnison River canyon, protected from the higher prevailing westerly winds.

HEALTH AND SAFETY MESSAGE

SAFETY starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT: Lowline Fire

DATE: 8/2/23

Shift: Day & Night

Major Safety Concerns

Road Conditions – we have experienced road conditions from dusty to washboard to very slick after a rain. Continue to evaluate the road conditions prior to committing all the resources.

Extended Extraction Times – Be familiar with the medical plan. Develop a plan on how you would get an injured firefighter out of your division timely. Factor in how smoke or clouds will reduce the likelihood of utilizing helicopters for a medevac.

Animals are on the Road! – Be prepared for sudden encounters with animals while driving to and from your work assignment. Deer, Elk, Moose, Cattle, and Bear have all been seen on this fire.

Extended Medical Transport Times

- Don't count on air transport
- Have a Primary, Alternate, Contingency and Emergency plan for transport
- Call for help early! Don't wait!
- Use all resources available to ensure effective patient care

The Fire and Spike Camp are both situated in excellent Black Bear habitat

- Try not to look the bear in the eyes as this can be interpreted as threatening behavior
- If the bear is near, but has not acted aggressively, back slowly away until you are out of the area
- Do not climb trees; all black bears can climb trees
- DO NOT RUN. Black bears will often bluff their way out of threatening situations by charging and veering off
- Do not leave trash or food remnants at work sites, bears can become habituated to trash and human food which causes problems for future bear/human interactions

Operational Risk Management

Accept no unnecessary risk – risk that is undertaken that does not contribute meaningfully

Accept risk when benefits outweigh costs – sum of benefits exceed sum of costs

Make risk decisions at appropriate levels – leaders must ensure subordinates understand the risk assigned to them, Leaders assign risk to accept not work to accomplish

Anticipate and manage risk by planning – thorough planning identifies hazards and steps to complete the mission at the lowest acceptable risk

Safety Officers: David Vitwar, Todd Legler, Mike Sugaski and Mateo Pacheco(t)
