INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period: DAY	
LOWLINE	Date/Time From: 08/03/2023 0700 THU	Date/Time To: 08/03/2023 2100 THU
3. Objective(s):		
<p>OBJECTIVES FOR FIREFIGHTER AND PUBLIC SAFETY Safety of Firefighters and the public will be the highest priority throughout all phases of the incident. Manage the risk to fire fighters and the public by utilizing a risk-based approach to decision making. Ensure quality tradeoff conversations occur with Agency Administrators, partners, and stakeholders.</p> <p>OBJECTIVES FOR PROTECTION OF VALUES AT RISK Utilize appropriate fire strategies to minimize fire impacts on residences, commercial properties, critical community infrastructure to reduce the potential for adverse health, social, financial, and economic hardships. These include:</p> <ul style="list-style-type: none"> • Structures within the planning area including but not limited to Wilderness Streams, isolated ranches and private properties along CR730, Mill Creek, and Eagle Ridge Ranch. • Critical Gunnison Sage Grouse Habitat • Critical water infrastructure resources (reservoirs, dams, ditches) • Cultural and historical resources including but not limited to Castle Creek Cow Camp • Agricultural and Ranching Operations • Antelope Timber Sale <p>OBJECTIVES FOR INFORMATION AND RELATIONSHIPS Maintain and enhance relationships with cooperators, stakeholders, the local community and adjoining agencies through effective and timely communication, engagement and information sharing. Consider operational strategies that minimize the impact of smoke to sensitive areas and receptors by adjusting tactics, monitoring smoke impacts, and following guidance in state smoke management plans and coordinating with state and local Air Quality Control Commission.</p>		
4. Operational Period Command Emphasis:		
<ol style="list-style-type: none"> 1. Manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when values threatened warrant it and the probability of achieving objectives is high. 2. Utilize strategies and tactics that commit responders only to operations where and when they can be successful, and under conditions where important values at risk are protected with the least exposure necessary. 3. Contain and control portions of the fire that are a threat to identified values to be protected. 4. Mop-up to the extent necessary to prevent escape of the fire and additional spread or damage to other values within the perimeter. 5. Implement practices that reduce the potential for spread of infectious disease, such as distributed operations, adhering to CDC guidelines and other actions that improve the health environment for firefighters and support personnel. 		
General Situational Awareness:		
<ol style="list-style-type: none"> 1. Complete a good size up of your work area to mitigate hazards. 2. Be prepared for changing weather conditions. 3. Minimize firefighter exposure to falling tree hazards. 4. Know who you are working for.

WEATHER SUMMARY:

Forecasted temperatures in the low to mid 70s. Lightning Activity Level of 2, above 10,000' a LAL of 3, afternoon thunderstorm activity will bring a chance of rain shower. 20' Winds from the west in the mid-teens, with stronger outflow winds from thunderstorms gusting above 20 mph. Daytime humidity around 30%. Inversion is expected to lift around 10:00. Cloud cover of 25% at 15:00.

Warmer and drier conditions are expected to develop by Friday, continuing into next week. Saturday is looking like it will be a red flag warning day. Afternoons will becoming sunnier with less cloud cover.

FUELS SUMMARY:

Fuels in the fire area are composed of timber with understory (mixed conifers with litter and reprod), as well as grass with shrubs (perennial grasses mixed with brush). Heavy fuel concentrations of standing red needle snags and large down dead are common in timbered areas. It is likely for fire to spread in surface dead and down fuels by holding heat thru wetting events, being receptive to fire brands increasing spotting potential, being a ladder fuel for fire to climb into crowns as well as potential to be rolling material on steep slopes.

Live surface fuels of grass and sage are in green up conditions, have high fuel moisture content, are not available to burn with intensity, will prohibit fire spread by acting as a heat sink.

Local fire danger indices have been trending downward; however, values are above average and expected to start increasing as fuels dry. Fire danger will increase during the warm and dry weather in coming days.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Dead fuel moisture content is dropping. Fire behavior is expected to be similar to yesterday, mostly smoldering and creeping in the AM, transitioning to surface fire activity in afternoon. Fire rates of spread, spread potential, and spotting distance is increasing as fuels dry out. As skies clear up, solar heating will wake up areas of heat. Burn periods will be increasing in length each day.

After the inversion lifts, solar radiation will dry out fuels, any interior areas of unburned fuels in mixed conifer could have flanking, backing, moderate surface fire intensity, torching and spotting.

SPECIFIC:

Along the perimeter expect isolated areas of smoldering and creeping fire, possibility of a torching snag.

DIV A & Z, potential for spot fires east of control lines in grass areas from torching, however FMC of grass and sage high enough to limit any spot fires spread and growth potential.

DIV W, X & Y, scattered heat in continuous stringers of mix conifer with jackpots of dead and down will allow fire to grow to the west. Potential for rolling debris to ignite fuels below on steep slopes.

Argh! A dozer ran over my radio, what do I do?

You'll need to see Finance!

- We will send you a special new & improved PLD form (OF-289) that has a back page to help document the approvals and to streamline the process.
- Remember that you'll need to describe how the fire caused the loss or damage - simply being on the incident doesn't mean the fire caused the damage or loss.
- Replacement of non-standard items (not procured through mandatory sources of supply) may be authorized up to the dollar limit identified through these sources. Costs beyond this amount are covered by home unit funds (IIBMH Chapter 30).
- Be sure to bring in any damaged property with you. The incident will keep the damaged item if it is approved for replacement.
- You don't want to wait until you demob; the final approval comes from the IBA (who is not on-site) and takes time.

HEALTH AND SAFETY MESSAGE

SAFETY starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT: Lowline

DATE: 8/3/23

Shift: Day and Night

- **MISSION CREEP** – If your assignment does not have purpose and meaning or does not support meeting the objectives, you should re-access the assignment. How does your work contribute to the success of protecting critical values? Do you know what the critical values of the Lowline Fire are?
- **MEDICAL INCIDENT REPORTING** – Do you know what to do in case of a medical **emergency**? When in the field of operations, call Communications on a command frequency and provide a Medical Incident Report. If not in the field of operations or you don't have an operational radio, call 911, then follow up with a call to communications or the MEDL. Review Medical Plan (ICS 206) and become familiar with the "Medical Incident Report". Your actions may be what save a life.
- **CUMULATIVE FATIGUE** – This is going to be a long fire year. Take care of yourself by getting some good rest when you get home, spend some time with family and friends, rehab your gear, and we will see you on the next one. Check out the information boards for additional information about fatigue and recovery.

*KEEP YOUR HEAD IN THE GAME. YOUR ASSIGNMENT IS NOT OVER
TILL YOU MAKE IT HOME SAFETY.
FINISH STRONG!!!*

Safety Officers: Todd Legler, David Vitwar, Mike Sugaski, Mateo Pacheco(t)

IN CASE YOU GET ASKED...

- A full suppression fire is one that is fought directly, providing the risk to firefighter safety is acceptable, or indirectly in areas where firefighters can actively suppress the fire on their terms at a lower risk to their safety.
- A wildfire burns at different levels of intensity creating a mosaic pattern as it leaves some areas totally burned, partially burned, or not burned at all inside the fire perimeter.
- Remote and rugged terrain in the wilderness poses a high risk to firefighter safety. If the fire burns into the wilderness, we will right-size for the situation and utilize natural fire breaks and the weather to help suppress the wilderness portion of the fire over a longer time with fewer people.
