## INCIDENT OBJECTIVES (ICS 202)

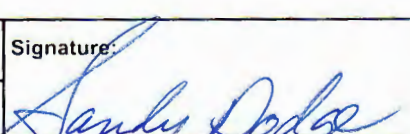

<b>1. Incident Name:</b>	<b>2. Operational Period: DAY</b>	
LOWLINE	Date/Time From: 08/04/2023 0700 FRI	Date/Time To: 08/04/2023 2100 FRI
<b>3. Objective(s):</b>		
<p><b>OBJECTIVES FOR FIREFIGHTER AND PUBLIC SAFETY</b>            Safety of Firefighters and the public will be the highest priority throughout all phases of the incident. Manage the risk to fire fighters and the public by utilizing a risk-based approach to decision making. Ensure quality tradeoff conversations occur with Agency Administrators, partners, and stakeholders.</p> <p><b>OBJECTIVES FOR PROTECTION OF VALUES AT RISK</b>            Utilize appropriate fire strategies to minimize fire impacts on residences, commercial properties, critical community infrastructure to reduce the potential for adverse health, social, financial, and economic hardships. These include:</p> <ul style="list-style-type: none"> <li>• Structures within the planning area including but not limited to Wilderness Streams, isolated ranches and private properties along CR730, Mill Creek, and Eagle Ridge Ranch.</li> <li>• Critical Gunnison Sage Grouse Habitat</li> <li>• Critical water infrastructure resources (reservoirs, dams, ditches)</li> <li>• Cultural and historical resources including but not limited to Castle Creek Cow Camp</li> <li>• Agricultural and Ranching Operations</li> <li>• Antelope Timber Sale</li> </ul> <p><b>OBJECTIVES FOR INFORMATION AND RELATIONSHIPS</b>            Maintain and enhance relationships with cooperators, stakeholders, the local community and adjoining agencies through effective and timely communication, engagement and information sharing. Consider operational strategies that minimize the impact of smoke to sensitive areas and receptors by adjusting tactics, monitoring smoke impacts, and following guidance in state smoke management plans and coordinating with state and local Air Quality Control Commission.</p>		
<b>4. Operational Period Command Emphasis:</b>		
<ol style="list-style-type: none"> <li>1. Manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when values threatened warrant it and the probability of achieving objectives is high.</li> <li>2. Utilize strategies and tactics that commit responders only to operations where and when they can be successful, and under conditions where important values at risk are protected with the least exposure necessary.</li> <li>3. Contain and control portions of the fire that are a threat to identified values to be protected.</li> <li>4. Mop-up to the extent necessary to prevent escape of the fire and additional spread or damage to other values within the perimeter.</li> <li>5. Implement practices that reduce the potential for spread of infectious disease, such as distributed operations, adhering to CDC guidelines and other actions that improve the health environment for firefighters and support personnel.</li> </ol>		
<b>General Situational Awareness:</b>		
<ol style="list-style-type: none"> <li>1. Complete a good size up of your work area to mitigate hazards.</li> <li>2. Be prepared for changing weather conditions.</li> <li>3. Minimize firefighter exposure to falling tree hazards.</li> <li>4. Know who you are working for.</li> </ol>

# INCIDENT Weather Forecast

**Forecast No:** 8  
**Prediction For:** Friday  
**Shift Date:** August 04, 2023  
**Forecast Issued:** August 03, 2023 at 1800

**Name of Incident:** Lowline  
**Unit:** GMUG NF  
**Incident Meteorologist:** Scott Stearns  
 (208) 577-1617

**Discussion:** Moisture continues moving out of the area today, but a shower/storm cannot be completely ruled out. Best chances for any shower / storm activity will occur between 1300-1500. Expect more solar radiation than what occurred yesterday. The drying and warming trend continues into Saturday... allowing for deeper mixing resulting in stronger and gustier winds over the area as well. This combination will provide near-critical conditions to the area on Saturday afternoon.

### WEATHER AND FUELS INPUTS

#### WEATHER SUMMARY:

Mostly sunny, warm, dry day. Max temperature in the mid-70s. Daytime relative humidity approximately 26%. 20' Winds from the west in the mid-teens with gusts approximately 23 mph. Lightning Activity Level of 2. Inversion is expected to lift around 10:00. Cloud cover of 15% at 15:00. Probability of ignition between 50-65%.

Warmer and drier conditions will continue thru weekend. Afternoons will be sunnier with less cloud cover. A drying trend has begun. Saturday and Sunday, Hot-Dry-Windy Index is expected to be in the 95<sup>th</sup> percentile. Sunday is forecasted to be drier, a fire weather watch has been issued. Potentially becoming a red flag warning.

#### FUELS SUMMARY:

Fuels in the fire area are composed of timber with understory (mixed conifers with litter and reprod), as well as grass with shrubs (perennial grasses mixed with brush). Heavy fuel concentrations of standing red needle snags and large down dead are common in timbered areas. It is likely for fire to spread in surface dead and down fuels by holding heat thru wetting events, being receptive to fire brands increasing spotting potential, being a ladder fuel for fire to climb into crowns as well as potential to be rolling material on steep slopes.

Live surface fuels of grass and sage have moderate fuel moisture content, decreasing in FMC as growing season peaks, start to cure with hot and dry weather. These fuels may still act as a heat sink and limit fire spread but will catch on fire if adjacent fuels release enough energy and there is wind to fan the flames.

Local fire danger indices are above average and expected to increase to 90<sup>th</sup> percentile as fuels dry. Fire danger will increase during the warm and dry weather in coming days.

### FIRE BEHAVIOR OUTPUTS

#### GENERAL:

Dead fuel moisture content is decreasing. Fire behavior is expected to be more active especially in afternoon. Fire rates of spread, spread potential, and spotting distance is increasing as fuels dry out. As skies clear up, solar heating will wake up areas of heat. Burn periods will be increasing in length each day.

After the inversion lifts, solar radiation will dry out fuels, any interior areas of unburned fuels in mixed conifer could have flanking, backing, moderate surface fire intensity, torching and spotting.

#### SPECIFIC:

Along the perimeter expect isolated areas of smoldering and creeping that ignites a jackpot of unburned dead and down fuels creating a possibility for torching and spot fires.

Expect heat sources and residual heat to wake up in green islands igniting unburned fuels inside the perimeter.

DIV A & Z, potential for spot fires east of control lines in grass areas from torching, however FMC of grass and sage high enough to limit any spot fires spread and growth potential.

DIV W, X & Y, isolated and scattered heat in continuous stringers of mix conifer with jackpots of dead and down will allow fire to grow to the west. On slopes, there is potential for rolling debris to ignite fuels below.

**\$\$\$ Property Loss & Damage \$\$\$**

*Argh! A dozer ran over my radio, what do I do?*

You'll need to see Finance!

- We will send you a **special new & improved** PLD Form (OF-289) that has a back page to help document the approvals and to streamline the process.
- Remember that you'll need to describe how the fire caused the loss or damage - simply being on the incident doesn't mean the fire caused the damage or loss.
- Replacement of non-standard items (not procured through mandatory sources of supply) may be authorized **up to the dollar limit** identified through these sources. Costs beyond this amount are covered by home unit funds (IBMH Chapter 30).
- Be sure to bring in any damaged property with you. The incident will keep the damaged item if it is approved for replacement.
- You don't want to wait until you demob: the final approval comes from the IBA (who is not on-site) and takes time.

# **HUMAN & ORGANIZATIONAL PERFORMANCE SAFETY MESSAGE**

*Fire fighter safety comes first on every fire, every time*

---

## **Primary Hazards:**

- **Snags** – There are many fire weakened trees falling due to outflow winds.
- **UTV/ATV driving** – Utilize experienced drivers as needed, adhere to agency policy.
- **Fatigue** – Stay focused on the task at hand and get adequate rest.
- **Operational tempo will change** – Drying trend.

## **Watch Out Situations**

- **04. Unfamiliar with weather and local factors influencing fire behavior.**
  - **14. Weather becoming hotter and drier.**
  - **15. Winds increasing and/or changing directions.**
- 

## **What is Complacency?**

(From an ex-Hot Shot and DIVS from this team)

Complacency is when your SA isn't where it should be. We are asked to successfully perform in a complicated dynamic environment, while carrying sharp tools on steep slopes for long hours. The expectation is to ensure that yourself and those you manage make it off the hill in one piece. Over time, this task becomes daunting due to our human limitations.

- When gravity feels stronger
- When your head no longer is looking around
- When you begin to “drop the ball”
- When you forget to use your blinker
- When you stop thinking ahead and start thinking about going home
- When that nervous energy no longer grips your heart when engaging the fire

You are complacent. “Re-engage Maverick, Re-engage Ice Man.”

(Top Gun)
