FIRE BEHAVIOR FORECAST			
FORECAST NUMBER	20	TYPE OF FIRE	Wildfire

DATE ISSUED	08/30/2023	TIME ISSUED	17:00

INPUTS

WEATHER SUMMARY:

The high pressure ridge has been slow to shift to the east and bring in monsoon moisture out of the south. As a result, we will stay in a dry pattern for at least another day. Current forecast calls for moisture to move up from the south into Southwest Colorado late Friday, but the Bear Creek and Quartz Ridge fires may end up on the eastern fringe of that moisture. Today will be similar to yesterday with above normal temperatures and plenty of sunshine until scattered to broken cloud cover builds up in the afternoon. Temperatures could reach into the lower 80s and relative humidities could drop into the mid-teens on the fires. Winds will be mostly terrain driven less than 15 mph and southwest on the ridgetops with gusts to 20 mph in the afternoon. Overnight humidity recoveries will be around 50% which is still pretty good.

FUELS SUMMARY:

Fuels in the fire area are composed primarily of timber with understory (mixed conifers with heavy litter and aspen stands). Heavy fuel concentrations of standing snags and large down dead are common in timbered areas. It is likely for fire to spread in concentrations of surface dead and down fuels which is promoting torching and spotting into receptive surface fuel beds. Aspen stands are currently retarding fire spread. Live surface fuels of grasses, forbs and brush are still not promoting spread.

Strong winds and gusts from outflows can topple snags.

OUTPUTS

FIRE BEHAVIOR

General:

Not much change to the fire behavior forecast except a slight increase in fire activity with sunshine and warmer temperatures before cloud cover takes over in the afternoon. Fuels that have held heat in heavy concentrations of dead and down fuels have continued to smolder and spread minimally. With warmer temperatures and continued periods of sunshine expect that these remaining pockets of heat may flare up producing visible smoke columns and isolated single and group tree torching. Spot fires may become established in fuels that have dried due to sunshine. Wind gusts on ridgetops where pockets of intense heat are present may cause torching to transition to brief short crown runs. Short crown runs are also possible on steep slopes with heavy timber. Surface spread will be moderate in areas of closed timber but will continue to be retarded in aspen and areas of open timber with live surface fuels.

Specific:

Quartz Ridge

Areas to watch continue to be pockets of heat on the south side of the fire on the east side of Quartz Creek near the trail. These pockets are in heavy timber and could flare up causing torching, spotting and possibly a short crown run to the east up towards scabby fuels higher up on the slope. Also a pocket of heat on the west side of Quartz Creek north of where the fire crossed the creek on 8/21. This pocket could also flare up but it is unlikely that spread could continue to the east as there is a meadow on the east side of the creek. Also an area of scattered heat on the ridge near the northern most part of the fire could spread but any spread to the east or northeast from this area would be into large aspen stands which would effectively halt spread.

Bear Creek

Areas to watch are points of isolated heat along the ridge between Bear Creek and Shaw Creek which could flare up and produce spot fires downslope into Shaw Creek. Spread would be moderate at best from the fire edge and any spot fires produced due to scattered aspen stands. Also some pockets of isolated heat on the ridge above Weminuche Valley and slightly downslope but spread from these points would also be moderate at best.

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON-SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2^o – 3^o burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2^o – 3^o burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
