FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 5	TYPE OF FIRE: Wildfire
FIRE NAME: Rock Mountain Fire	OPERATIONAL PERIOD: Friday, November 18, 2016 Day and Night Shifts
DATE ISSUED: Thursday, November 17, 2016	TIME ISSUED: 2000
UNIT: Chattahoochee-Oconee National Forest	SIGNED: <i>Chris Johnson</i> – Fire Behavior Analyst

INPUTS

WEATHER SUMMARY: *** See Fire Weather Forecast for Details *** Winds will be increasing late day and night ahead of a dry cold front. Warmest day and lowest humidity this week.

Day Shift: High Temps: lower 70's Low RH: 27% Ridge winds becoming SW 5-10 mph late day.

Night Shift: Temps 45-52 night, RH recovery 50%. Ridge winds becoming SW 10-15 gusts 20.

FIRE DANGER: Exceptional to extreme drought with record ERCs (above 99th percentile). The Ketch-Byram Drought Index (KBDI) values are in the 725-750 range (on a scale of 0-800) indicating much rainfall is needed to return the soil moisture (and fuels) to more seasonal conditions.

FUELS: The primary carrier of fire is hardwood leaf litter on the surface (FM9/TU3) with some shrub components (rhododendron/mountain laurel). Brush at higher elevations may become available to burn on steep slopes or with exposure to higher winds. Leaf off is 40% to 90% complete, increasing with elevation. New leaf off will add surface fuel load over burned areas and fireline and increase re-burn or slop-over potential. 1000-hour fuels are at 13%, well below average. Log bridges over creeks will burn and allow potential for fire to cross. Ensure culverts under roads used as firelines are clear of burnable fuel.

TOPOGRAPHY: Steep/rugged, 40+% slope.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Fire spread is typically a long line of fuels and slope driven surface fire in the leaf litter with 1-5 foot flame lengths. Mountain laurel/Rhododendron brush may generate short runs with 9-10 foot flame lengths with ROS 15-20 ch/hr. Fire is consuming well into the duff layer and the 1000-hour fuels completely. Single tree torching, should it occur, will be in conifer species and may spot up to 8 chains (0.1 mile) but, usually much less. Burn periods have been long; from 16-24 hours per day. Conditions are very favorable for burnout most of the day but, getting unfavorable into evening and night where winds are increasing. Winds late day and at night will increase tree fall.

Fuel Model	ROS (ch/hr)		Flame Length (feet)		PIG	Spotting Dist.
	Head	Backing	Head	Backing		
FM09-Timber Litter	5-11	1-3	3-5	1-2	60%	< 0.1 miles
Hardwood Leaf Litter						

Fire behavior predictions are for the hottest and driest period of the day.

SPECIFIC: Branch I:

Div A,D,F – Fire has held on these divisions for several days. Large interior fuels continue to burn out. As winds increase, leaf fall and tree fall could compromise firelines where heat still exists.

Div H - Fire holding on Charlies Creek. Large interior fuels continue to burn out. As winds increase, leaf fall and tree fall could compromise firelines where heat still exists.

Branch II:

Div M,P - Spread continuing north toward Fairfield ridge and the AT and west toward Tate City. Expect increases in rates of spread and flame lengths as winds increase from the SW. Leaf off at this elevation is further advanced. As a result, the fuelbed is deeper and less sheltered. Mountain laurel/rhododendron brush may produce short runs on steeper slopes and under higher winds.

Div R/W - Fire spread continues north and east toward Coleman Gap. Expect increases in rates of spread and flame lengths as winds increase from the SW. Leaf off at this elevation is further advanced. The fuelbed is deeper and less sheltered. Mountain laurel/rhododendron brush may produce short runs on steeper slopes and under higher winds. Fire holding at south end of division.

Burrell Fire - No fire spread expected but, firelines will be tested with winds later in the day and night shift.

AIR OPERATIONS: Visibility issues due to smoke will yield to turbulence issues as winds increase.

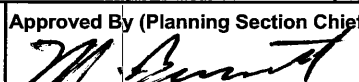

SAFETY

WATCH OUT #15 – Wind increases and changes direction.

HEALTH AND SAFETY MESSAGE

SAFETY starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT's: Rock Mountain Fire

DATE: Nov 18th **Operational Period:** Day/Night

Major Hazards and Risks: Fatigue, Snakes, Driving Hazards, and Hazard Trees.

Hazardous tree protocol for crews

- 1- Identify and evaluate-** Scout for hazardous trees and flag the tree and a buffer or post warning signs. Not all dead trees are hazardous and many green trees are hazardous.
- 2- Post lookouts-** In areas of known or potential snags and hazard trees.
- 3- Communicate-** Make sure everyone in the work area knows the presence and location of hazard trees. Warning- Have crewmembers yell "snag" or "snag patch" when they walk by a hazardous tree or snags.
- 4- Removal or avoidance-** Mitigate the hazards with steps agreed to by you and your supervisor. This would include flagging the hazard, posting a lookout, choosing to work away from the hazard, planning escape routes, etc. Hazardous trees that are too dangerous to cut should be identified and avoided. In areas with numerous hazard trees, the appropriate decision might be to avoid the area completely and not cut.

Summary: Conditions in hardwood trees are not similar to conifer trees, and firefighters need to take appropriate considerations and actions when working around and falling these hazardous trees. Experience in western fire regions may give way to complacency for falling protocols in these hardwoods. Do not endanger yourself or others during falling operations.

Incident Safety Officer: Tim Sampson SOF1

Human Resource Message

Watch out situations

We all know about “watch out” situations on the fireline, but “watch outs” also apply to social behaviors.

In addition to work behaviors, such as digging line and mopping up, social behaviors are the actions we do at work that are not really necessary to achieve objectives but make the job more enjoyable...or not!

Examples of enjoyable appropriate behavior include showing interest and caring in someone as a person, discussing common interests such as family, sports and hobbies.

Negative or inappropriate behavior is most commonly thought of as blatant harassment or discrimination. However, most inappropriate behavior is unconscious or insensitive and includes things like put down humor or sarcasm; arguing, fighting and quick tempers; inappropriate joking, teasing and hazing.

People have different tolerances for this type of behavior. Recognize “Red Flags” in those who are possibly being mistreated. Look for actions like withdrawing from the group, denial of their feelings, blaming themselves for feeling bad, showing signs of embarrassment

If you notice these signs, speak up. If you don't like how yourself or coworkers are being treated, ask that it stop. If you aren't comfortable doing that, let a supervisor or HRS know.

Take action to deal with inappropriate behavior.
We are here to do a job—put out the fire. Conduct yourself in a manner that treats others with dignity and respect

Have a great day! And stay safe.
