<b>3. Objective(s):</b>		
<p>1. Implement Operational actions that balance responder risk and probability of success in efforts to protect identified values at risk</p> <p>2. Implement suppression actions to minimize fire impacts to private lands and private residences</p> <p>3. Take actions to maintain and strengthen relationships with partner agencies, cooperators, community groups and members</p> <p>4. Provide for Initial Attack within designated Initial Attack boundaries. Support request for assistance to local units as feasible</p> <p>5. Develop suppression actions within wilderness and road-less areas that minimize adverse impacts to wilderness/road-less values and threatened/sensitive species of concern</p>		
<b>4. Operational Period Command Emphasis:</b>		
<ul style="list-style-type: none"> <li>• Coordinate suppression actions with cooperators responsible for structure protection in Rabun, Towns, Macon &amp; Clay Counties.</li> <li>• Provide for public safety by recommending evacuation levels as deemed necessary to responsible emergency management officials in Rabun, Towns, Macon, &amp; Clay counties.</li> <li>• Prevent loss and/or damage to private lands through combination of direct attack, use of natural barriers in combination with burnout operations, and point protection around threatened structures. Coordinate protection of private lands in North Carolina with the North Carolina Forest Service.</li> <li>• Limit fire spread to the north and east of the Nantahala Wilderness area in order to reduce loss and/or damage to private lands and residence along Hwy 64 and to the Coweeta Research Area. Establish containment lines with a consideration for long term patrol and maintenance needs associated with continued leaf-off.</li> <li>• Maintain patrol actions following initial containment efforts on all perimeters to ensure continued containment until leaf-off is complete and/or weather conditions preclude further fire spread.</li> </ul>

## FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 13	TYPE OF FIRE: Wildfire
FIRE NAME: Rock Mountain Fire	OPERATIONAL PERIOD: Saturday, November 26, 2016 Day and Night Shifts
DATE ISSUED: Friday, November 25, 2016	TIME ISSUED: 2000
UNIT: Chattahoochee-Oconee & Nantahala National Forests	SIGNED: <i>Chris Johnson</i> Fire Behavior Analyst (FBAN)

### INPUTS

**WEATHER SUMMARY:** \*\*\* See Fire Weather Forecast for Details \*\*\*  
 Drying conditions continue. NW winds and clear skies will accelerate drying. Upslope/up valley winds with daytime heating turning downslope/down valley at dusk.

**Day Shift:** High temp: 62°F, Low RH: 25% Ridge winds NW 5-10mph. Patchy fog possible early.  
**Night Shift:** Low temp: 28°F, RH recovery max. 80%. Ridge winds NW 5-10mph. Patchy fog possible.

**FIRE DANGER:** Extreme drought with record ERCs. The Ketch-Byram Drought Index (KBDI) values are in the 735 range (on a scale of 0-800) indicating much rainfall is needed to return the soil moisture (and fuels) to more seasonal conditions.

**FUELS:** The primary carrier of fire is hardwood leaf litter on the surface (FM9/TU3) with some brush components (rhododendron/mountain laurel). Brush at higher elevations may become available to burn on steep slopes or with exposure to higher winds. Leaf off is 60% to 95% complete, increasing with elevation. New leaf off will add surface fuel load over burned areas and firelines and increase re-burn or slop-over potential. 1000-hour fuels are at 13%, well below average. Log bridges over creeks will burn and allow potential for fire to cross. Winds can redistribute leaf litter reducing in some areas and increasing in others; think "transient" fuels.

**TOPOGRAPHY:** Steep/rugged, 40+% slope.

### OUTPUTS

#### FIRE BEHAVIOR

**GENERAL:** Typical fire spread in leaf litter is in long lines of fire that is slope, aspect and fuels driven. Fire is consuming well into the duff layer and the 1000-hour fuels completely. The burn period is expected to be 14-18 hours long. Conditions for burnout should improve today at highest elevations on the fire.

Fuel Model	ROS* (chains/hour)		Flame Length (feet)		Probability Of Ignition	Spotting Distance
	Head	Backing	Head	Backing		
FM09-Timber Litter Hardwood Leaf Litter	6-15	1-2	2-6	1-2	50%	< 10 yards

\*ROS = Rate of Spread Fire behavior predictions are for the hottest and driest period of the day.

#### SPECIFIC:

**Branch I/II:**

**DIV A/D/F/H/M/N/W** – Fire behavior is expected to be minimal in these divisions.

**Branch III:**

**Div O, P, Q, R** – Fire will rekindle from larger fuels that held heat through the rain event. Fire to move toward north and east toward planned firelines about ¼-½ mile this burn period. Fire will continue spread based on slope alignment and diurnal, slope/valley winds. Fire is likely to pause in wetter drainages. Favorable firing conditions continue at the lower elevations and to return by mid-day at higher elevations.

**AIR OPERATIONS:** Patchy fog in the morning hours. Smoke may impact visibility to the southeast of active burning.

### SAFETY

Fire behavior is on the increase again. Know what your fire is doing at all times.

# HEALTH AND SAFETY MESSAGE

*SAFETY* starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT: **Rock Mountain**

DATE: 11/25/2016

Oper. Period: 11/26/2016

**Driving:** During this Holiday weekend there is more traffic in the area. Always drive defensively and focus on the road. While you are on the fire the roads are washboard road surfaces, narrow and winding. Go around all corners like someone else is coming towards you.

**Fatigue:** Maintain 2:1 work/rest ratio.

**Burnout Operations in progress:** Maintain situational awareness and be aware of current fire behavior.

For many it might feel like groundhogs day so don't get complacent. Keep that constant evaluation loop going for hazards around you. Continue to communicate what you see and ways to mitigate the hazards.

## Watch Out Situation of the Day

3. SAFETY ZONES AND ESCAPE ROUTES  
NOT IDENTIFIED

## Escape Routes/Safety Zone Checklist

### Escape Routes:

- More than one escape route
- Scouted – soils, vegetation, slope
- Timed – slowest person, fatigue, dozer speed
- Marked – flagged for day and night use with lime green flagging

### Safety Zones:

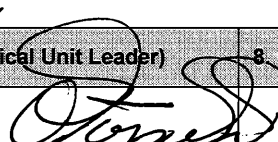

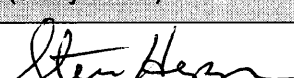

- Survivable without a shelter
- Natural – clean burn, water, bare soil/rock
- Manmade – constructed sites, roads
- Scouted for size and hazards
- Close enough considering escape time needed

### Remember and Follow:

- **The 10 Standard FIRE ORDERS.**
- **The 18 SITUATIONS that SHOUT WATCHOUT.**
- **The Common DENOMINATORS of Fire Behavior on TRAGEDY FIRES.**
- **The Downhill Line Construction Guidelines.**

Incident Safety Officer: **Tim Sampson SOF1, Steve Heppner SOF1, Marshall Brown SOF1(T), Tom Nash SOF2, Chuck Frank SOF2**

# **WILDERNESS CONSIDERATIONS**

- Use MIST tactics and “no trace” camping (pp. 91-92 in IRPG).
  - Use natural features as much as possible.
  - Cut and remove as little vegetation as possible for safe fireline construction.
  - Consider minor fireline location adjustments to minimize tree cutting.
  - Construct fireline only as wide and as deep as needed for safety and effectiveness.
  - Carry out your trash and food scraps every shift.
  - Use a cathole for sanitation: 8” deep and at least 200’ from water.
  - Protect ground from spills when refueling chainsaws, leaf blowers, and other motorized equipment.
  - Remove temporary signs, flagging, and stakes once they are no longer needed.
  - If in doubt, ask your fireline supervisor. Fireline supervisors should contact the Wilderness READ.
- 

# **TRAIL CONSIDERATIONS**

- No heavy equipment or UTVs should be used on the trail bed without specific prior approval. Walking a dozer across the trail with the blade up is permitted.
  - Use MIST tactics.
  - Foam and retardant are allowed (Wilderness approval required, where applicable); however, firing is the preferred method of control lines within 750’ either side to the trail bed.
  - No new parking areas or drop points may be constructed within 750’ either side of the trail bed without prior approval. Existing areas and points may not be enlarged.
  - When possible (and with approval), locate helispots/sling site(s) out of direct view of Appalachian Trail and trail shelter(s). To the extent possible, minimize ground disturbance and number of trees removed.
- 

# **Appalachian Trail Facts**

- A unit of the National Park Service (although approximately 40% is on USFS lands)
- Built and maintained by volunteers starting in 1920's
- Trail Length - 2,190 miles
- Traverses 14 states (from Georgia to Maine)
- Elevation gain/loss equal to climbing Mount Everest 16 times
