□FIRE BEHAVIOR

John Kern - FBAN

Bugaboo Incident NF in Florida/Florida Div. of Forestry Forecast #29 5/25/2007

<u>General</u>: Winds will be a little weaker today but still brisk at times. RH will stay above critical levels, so there is NO red flag warning for today. Continue to watch for the increased chance for REBURN along the lines. Also, be alert to new starts from lightning and other sources. Fuels are still very dry so if a fire gets rolling, expect fire behavior to be similar to that predicted by the FM 4 – Very Heavy Rough model.

Daytime- Fires should behave as predicted by FM 7 or FM 9 until intensity builds. Fires over the past several weeks have burned with behavior best predicted by FM 4.

With winds (20' above ground) of 7-12 MPH and the predicted Temp. and RH, we could see the following fire behavior.

DAY TIME	Rate	(ch/hr)	
Wind Speed	5 mph	10 mph	15 mph
FM 4 Volatile Fuels	18	40	68
FM 7 Southern Rough	7	16	26
GR8 – Heavy load, very			
coarse, Humid Climate Grass	7	16	24
FM 9 – Long needle leaf litter	2	4	8

Flame Length (Feet)						
5 mph	15 mph					
10	15	19				
3	5	6				
5	7	9				
1	2	3				

NIGHT TIME after midnight	Rate	(ch/hr)	
Wind Speed	5 mph	10 mph	15 mph
FM 4 Volatile Fuels	6	14	23
FM 7 Southern Rough	5	11	18
GR8 – Heavy load, very			
coarse, Humid Climate Grass	3	6	9
FM 9 – Long needle leaf litter	1	3	3

Flar	Flame Length				
5 mph	5 mph 10 mph				
4	6	7			
2	2 3				
2	3	4			
1	2	2			

PROBABILITY OF IGNITION Daytime - 60%, Night-time 40 down to 10% at dawn. Spotting distances during the gust can be .3 miles.

All Divisions: Watch for spots, flare ups and REBURN runs. There are trees that have fallen on most if not all divisions.

Air Operations: Morning smog should burn off by 9 AM

Safety: Heavier fuels and live fuels are still very dry. Watch for intense runs due to gusty winds. Watch for REBURN in all areas. 20% chance of THUNDERSTORMS.

TAILGATE BRIEFING SHEET 2 OF 2

□SAFETY MESSAGE

Major Hazard and Risks:

- > Road Conditions
- **Complacency**
- > Tragedy and Near-Miss Wildland Fires
- Forest roads are not in very good shape. Roads are dusty, wash boarded, have deep ruts with high crowns, and areas of deep sugar sand. Slow down. Show courtesy and respect to your fellow firefighters and the others you share the roads with. Be mindful of your speed on Hwy 441 and Hwy 90.
- How complacent are you and your crew? Do you "forget" to wear your seat belt? Are you failing to wear all your PPE just because the fire activity has moderated some? Have you checked the condition (or presence) of the hand tools on your unit lately? Being recognized as a professional firefighter means you will not accept complacency from yourself or others around you.
- Four Major Common Denominators of Fire Behavior on Tragedy Fires:
 - Most incidents happen on small fires or on isolated sections of large fires.
 - Flare-ups generally occur in deceptively light fuels, such as grasses and light brush.
 - Most fires are innocent in appearance before unexpected shifts in wind direction and/or speed result in "flare-ups." Sometimes, tragedies occur in the mop-up stage.
 - Fires respond to large-and small-scale topographical conditions, running uphill surprisingly fast in chimneys, gullies, and on steep slopes. In Florida, this could also include: vegetation breaks, lakes, highways and power lines right-of-ways.
