FIRE BEHAVIOR FORECAST							
FORECAST NUMBER: #20	TYPE OF FIRE: Wildland						
FIRE NAME: Cowbell OPERATIONAL PERIOD: 04/23/2017							
DATE ISSUED: 04/22/2017	TIME ISSUED: 1800						
UNIT: Big Cypress Preserve	SIGNED: Glen Fortenberry						

#### FUEL ASSUMPTIONS:

Primary fuels consist of grass, shrub, pine overstory with shrub palmetto understory and timber litter. Current fuel conditions are favorable for very active fire behavior within the grass and shrub fuels. Fire activity will greatly diminish in the wide cypress strands. The current drought conditions have led to both live and dead fuel moistures reaching levels of concern. Expect all fuels to burn readily, including those that appear green.

#### The fuel moisture for today is:

Calculated 1 hr fuel12%, 10 hr fuel 9%, 100 hr fuel 11%, 1000 hr fuel 16%

<u>Critical fire behavior thresholds:</u> 1 HR Fuel Moisture <6%, RHs below 40% and a Dispersion Index greater than 60.

WEATHER: Mostly cloudy, Showers and thunderstorms possible.

WIND (20 FT): Light & variable becoming SE around10 mph in the late morning. Wind may become variable in the afternoon at 5-10 mph. Wind may become erratic due to outflow from thunderstorms.

MAX TEMPERATURES: 84-86.

MIN RH: 57%.

LAL: 3

DISPERSION: 30 MAX MIXING HEIGHT: 4500 TRANSPORT WINDS: Easterly 10 mph.

#### General Fire Behavior Forecast:

Fuels are drought stricken and support active fire behavior with near  $\frac{1}{4}$  + mile rate of spread and 0.2 mile spotting in the pine/ palmetto areas. Grass fuels can spread just over  $\frac{1}{4}$  mph.

#### Specific:

**Cowbell:** Available fuels continue to be consumed with backing, flanking, creeping and smoldering fire. The possibility of reburn in needle cast is increasing but with the high RH level, spread would be minimal. Fire from a needle cast burn could still creep across a control line.

**MM 87**: Watch closely for spots from the initial attack and the burn out that occurred yesterday. Pay close attention for burning snags that could fall across the burn line.

**Initial Attack:** Even with higher RH levels, resistance to suppression efforts can be expected in all fuel types. Expect moderate rates of spread, with high intensities in pine/palmetto fuel type and anticipate spotting to challenge your control efforts.

# PREDICTIONS FOR MOST ACTIVE TIME OF PEAK BURNING PERIOD USING WEATHER FROM INCIDENT IMET

Fuel Model	Fire Behavior
Grass	ROS 15-25 ch/hr, FL 3-4 ft.
Shrub	ROS 8-15 ch/hr, FL 6-8 ft
Timber Litter (Cypress)	ROS 2-3ch/hr, FL 2-3 ft
Maximum Spotting	0.2mile
	25% in all models

**AIR OPERATIONS:** Thunderstorms are possible. Any development could impact air operations.

**FIRE BEHAVIOR SAFETY:** Isolated snags exist across all fires. Outflow winds from thunderstorms can bring these snags down. Watch were you park your vehicles and take breaks.

# **HEALTH AND SAFETY MESSAGE**

If you SEE something...SAY something

**INCIDENT:** Cowbell & MM 87 Fire **DATE:** 04/23/2017 **TIME:** Day Shift

#### **Major Hazards and Risks:**

- > THUNDERSTORM SAFETY
- > PERSONAL HYGIENE
- > COMMUNICATIONS

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail, and lightning occur only in the mature stage of a thunderstorm.

Observe the 30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, take the storm precautions identified in your IRPG on page 21. Know how to respond when thunderstorms occur.

Wash your hands with soapy water or hand sanitizer before each meal or snack and after each trip to the restroom. Cover your mouth when you cough or sneeze. Avoid hand shaking, use fist or elbow bumps.

6. INSTRUCTIONS AND ASSIGNMENTS NOT CLEAR

# **Communication Responsibilities**

All firefighters have five communication responsibilities:

- Brief other as needed
- Debrief your actions
- Communicate hazards to others
- Acknowledge messages
- Ask if you don't know
