4. Operational Period 5/18-19/2018 0800 - 2000			
5. General Control Objectives For The Incident <u>Objectives for the Incident:</u> <ul style="list-style-type: none"> • Ensure protection of human life as a top priority, followed by protecting communities and specifically identified facilities within the preserve. • Manage the fire under a strategy commensurate with risk and suppression action utilizing MIST, paying particular attention to Red-Cockaded Woodpecker habitat and Florida Panther den sites. • Provide protection to all private in-holding camps, commercial infrastructure, and limit disruption of landowner access. • Provide initial attack response for all new starts within the Big Cypress National Preserve and Florida Panther National Wildlife Refuge through coordination with the Preserve's Duty Officer. • Provide training opportunities for Preserve, state and federal personnel to strengthen organizational capabilities and complete training assignments. 			
<u>Control Objectives:</u> <ul style="list-style-type: none"> • Provide for point source protection of private land and critical infrastructure in areas that are or will be threatened by the predicted movement of the fires within the Avian Complex. • Limit the Flamingo fire from spreading north of the preserve boundary. • Limit impacts to I-75, US41, Seminole Tribe of Florida and Miccosukee tribal lands. • When possible, use fire management practices that replicate natural fire to the greatest extent. • Coordinate with Everglades National Park on all actions needed with monitoring Curlew Fire. 			
6. <u>Weather forecast for Period:</u> Deep tropical moisture in place across southern Florida will continue to lead to daily rounds of scattered showers with afternoon thunderstorms. The primary hazards from these storms will be frequent lightning and heavy rainfall. Between 0.25 and 0.75 inches of rainfall is possible each day, with locally heavier amounts under the strongest storms. In addition, sea breezes from either coast may impact the area, and gusty and erratic winds are possible in the vicinity of storms.			
7. <u>General Safety Message:</u> Look up, look down, look all around for hazards, recognize them and mitigate them.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: #15	TYPE OF FIRE: Wildland
FIRE NAME: Avian Complex	OPERATIONAL PERIOD: 05-18-18 and 5-19-18
DATE ISSUED: 05-17-18	TIME ISSUED: 1930
UNIT: Big Cypress Preserve	WRITTEN: David Quisenberry, Fire Behavior Analyst (T) Signed: David Quisenberry

FUEL ASSUMPTIONS:

3 Fuel Models Involved: Fuel Model 7 (Southern Rough), GR6 (grass model) TU3 (pine w/grass and shrub). Fine fuel moistures are high from recent precipitation. Fuels are unlikely to have sufficient drying time to become active as weather forecast is not very favorable for additional significant drying. Additional precipitation expected.

The fuel moisture for today is:

1 hr 12-14% 10 hr 12-14% 100 hr 20-22% Current KBDI – 496

Weather for Friday and Saturday Day Shift:

See Fire Weather Forecast on previous page

General Fire Behavior Forecast: Minimal fire activity expected today/tomorrow in those areas where fuels are wet from the last several days of precipitation. Fire spread and growth are not expected. Some fire activity is possible in areas that received less rain, but would not be significant. Smoldering in logs or stump holes possible.

Specific:

Buzzard: Overall minimal fire activity expected today as fuels are wet. Smoldering possible. **The area of heat on the Divisions J and E break could become active if fuels have time to dry in the morning. IR flight indicated heat in this area as well as near Division Zula/Alpha break.**

Flamingo: Minimal fire activity expected today as fuels are wet. Smoldering possible.

Curlew: Minimal fire activity expected today as fuels are wet. Fire continues to receive precipitation. No heat detected on IR flight. Smoldering possible.

Initial Attack: Lightning did occur over the Preserve yesterday. It appeared on radar that most lightning occurred in those areas that received heavy precip. IA is not out of the question, but fire behavior is unlikely to cause control problems today/tomorrow.

PREDICTIONS FOR MOST ACTIVE TIME OF PEAK BURNING PERIOD in drier fuels

Fuel Model	Fire Behavior
Grass	ROS – 3 to 5 ch/hr. with flame lengths of 2 to 4 ft
Shrub (palmetto/southern rough)	ROS – 3 to 5 ch/hr. with flame lengths of 2 to 4 ft
Timber Litter w/grass	ROS – 3 to 5 ch/hr. with flame lengths of 2 to 4 ft
Spotting Distance	Spotting distance less than 100'
Probability of Ignition	Very low 10%.

AIR OPERATIONS: Thunderstorms will once again be in the area and likely impact aviation operations.

FIRE BEHAVIOR SAFETY: Observe the 30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, find shelter. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

HEALTH AND SAFETY MESSAGE

Avian Complex

May 18-19, 2018

SAFETY IS ABOUT ATTITUDE

HOW'S YOUR PASSION FOR SAFETY?

Our emphasis on doing this dangerous job safely, needs to be fine-tuned with an attitude check. We know what safety is, we know what things to watch out for, but our ability to concentrate on this aspect of our wildfire suppression responsibility often is impaired by situations, physical difficulties, and inconveniences that have a profound effect on our frame of mind and our ability to focus attention on safe processes. Incident Attitude needs to be positive so that it does not impair our ability to think clearly and act decisively.

Make your attitude and habits toward safe behaviors and actions contagious so others will follow your lead. Work to prevent accidents, injuries, and illnesses by staying vigilant in your task, practice good hygiene and remain safety conscious. Just say **NO** to complacency!

TRANSITION DAY

Today this incident will transition from SA Gold Team to Marten's Type 3 Team. This is a heads up situation for everyone. Our goal is a seamless transition however there will be new faces with the new leadership.

- Know who you are working for
- Understand your work assignment
- If you have any questions or are uncertain of leaders intent.. ASK!!!
- Continue to provide team 4 with the outstanding and safe work product you gave us!

“WATCH OUT” FOR COMPLACENCY “LISTEN FOR THE ALARM”

- Fire activity is slowing considerably. Ward off boredom and complacency
- Take care of personal health conditions. See the medics for any issues/ needs.
- Clearly understand assignment and be accountable for meeting determined objectives.
- Review the risk management process, standard firefighting orders and 18 “watch out” situations.
- Communicate identified hazards to others.
- Enjoy your work, but avoid horseplay.
- Display an appropriate sense of humor.
- Keep speeds to the posted limits and headlights on, roads can pool water and be deceiving after rainfall in places. Use spotters when backing and determine if road surfaces have soft shoulders. Keep your windows and mirrors clean. Watch out for wildlife as well as other road hazards.
- It's a good time to do some “house-keeping with vehicles, secure all loose items in cab or bed of vehicles. Provide for safe transport of hand tools. Clean windshields daily. Use headlights and observe speed limits

Safety Officers: Randy Miller, Michael Heard, Eric Bader, Opie Blackwell, Kris Wilson

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
