**If you ever get so angry that your internal combustion could make you feel like this, take a few minutes to calm down!  
Try to treat others as you would like to be treated.**

How about a joke for ya?  
How do you stop a grease fire in the kitchen?  
You backburn the dining room!!!

Fire Behavior Forecast

<b>INCIDENT</b>	<i>Sweat Farm Rd. Fire</i>	<b>OPERATIONAL PERIOD</b>	06/18/07 Day
<b>ADMINISTRATION UNIT</b>	GA - GAS	<b>FORECAST #60</b>	

**WEATHER SUMMARY:**

Hot dry conditions will continue to dry fuels today. Although 10 hr fuels are at 16% locally, highest since the fire began. Winds are out of the SE today 5- mph 10, possibly increasing as the Easterly sea breezes come in this afternoon.

**GENERAL FIRE BEHAVIOR: Day Shift**

	<b>Swamp Fuels FM 4</b>	<b>Upland Pine FM 7</b>
Flame Length (feet)	14'	6'
Rate of Spread (ch/hr)	20 – 30	15 - 20
Spotting Distance (miles)	0.3	0.3
Probability of Ignition (%)	50%	50%

**SPECIFIC FIRE BEHAVIOR:**

**All Divisions:** Hot dry weather will continue to dry the fuels today and fire behavior should be moderate. Smoldering fuels and duff will continue to burn and may see more visible flames in unburned fuels. Reburn flames are relatively low @ <3'. Remember, fire behavior predictions are based on worse case scenario with the dries weather predictions and the highest winds.

\*\*Continue to monitor the line that has unburned fuel between the break and the fire in the refuge at Group/Division WE & WF. Activity picked up, but was still not threatening the lines. The hardwood fuel there are not carrying well, but the fire will carry through the heavy downed timber on the ground.

**IA:** Expect low to moderate to active fire behavior once fires become established. Should be well within the production rates and flame lengths constraints for dozers and engines.

**AIR OPERATIONS:**

No air visibilities restrictions after 0900. Little smoke to hamper flights, and be aware of afternoon storms.

**SAFETY:**

Monitor lines throughout the drying period of the day to avoid breaches in the lines from winds and directional changes.

**SAFETY MESSAGE**

**Incident:**

Sweat Farm Road

**Date:**

June 18, 2007

**Time:**

Day

**Major Hazards and Risks:**

- **Driving**
- **Weather**
- **Mop Up hazards**
- **Insects/Animals**

**Commercial traffic will increase in town today, so watch out for the other drivers!!! Don't park large vehicles in tight spaces when it is not necessary, leave safe distance to pull out when needed.**

Dehydration in these temperatures is common, even if your work load has decreased – so drink plenty of water before, during and after shift.

**More accidents and injuries occur during the mop up phase of the fire than any other, so look up, down and around to avoid hazards..**

**If it lives here, it Bites!** Snakes, ticks, alligators, bears, sand gnats and other critters are on the move so watch where you walk and check yourself for ticks daily. **Do Not play with the wildlife!**

**Risk Management Process**

**Step 1 Situation Awareness**

Gather Information

- Objective(s)       Previous Fire Behavior
- Communication     Weather Forecast
- Who's in Charge    Local Factors

Scout the Fire

**Step 2 Hazard Assessment**

Estimate Potential Fire Behavior Hazards

- Look Up/Down/Around Indicators

Identify Tactical Hazards

- Watch Outs

What other safety hazards exist?

Consider severity vs. probability?

**Step 3 Hazard Control**

Firefighting Orders → LCES Checklist - MANDATORY

- Anchor Point
- Downhill Checklist (if applicable)

What other controls are necessary?

**Step 4 Decision Point**

Are controls in place for identified hazards?

NO - Reassess situation    YES - Next question

Are selected tactics based on expected fire behavior?

NO - Reassess situation    YES - Next question

Have instructions been given and understood?

NO - Reassess situation    YES - Initiate action

**Step 5 Evaluate**

Personnel: Low experience level with local factors?

Distracted from primary tasks?

Fatigue or stress reaction?

Hazardous attitude?

The Situation: What is changing?

Are strategy and tactics working?

**Maintain situational awareness at all times...**

**Safety Officers:** Mark Munns, John Godwin, Julian Beasley, Tommy Hawkins, Charles Wood, Phil Spor, Harry Kepler & John Barnes

Do Not try to catch or kill snakes! 3. Post experienced Lookouts. Make sure LCES is in place and make known. 4. Take plenty rest breaks and encourage to drink water NOW through briefings. 19. Watch out for complacency and fatigue. 8. Utilize Fire Departments for structure protection. Tailgate briefings on WUI hazards. 20. Defensive driving will be addressed in all briefings. 21. All personnel must meet the 2:1 work/rest ratio. Line supervisors and Safety will monitor closely.
											5. Flag escape routes on right side of escape route facing outward. Create new escape routes as you progress. Maintain LCES at all times. 6. Post lookout for Snags, Runs, and Spot Fires. 7. FBA/Meteorologist to develop weather watch system. .8 Ensure Fireline is Anchored.							22. Notify EOC of need to close CSX track adjacent track to ensure safety of firefighters due to excessive smoke or fire activity. 23. Recongnize, Communicate & Avoid Hazmat situations. 24. Line Supervisors will provide clear, concise briefings. 25. Review Structural "Watch Out" situations.	
											9. All Firefighters must review current weather, predicted weather & fire behavior forecast. 10. Keep Firefighters informed of any changes in predicted weather, consider at least a two day weather pattern when planning burnout operations. 11. Refer to IRPG, pg. 12 on Power Line Hazards. 12. Observe all traffic signals and speed limits.							26. Ensure Traffic Planning is safe and enforced. Heed Defensive Driving techniques noted in Safety Messages. 27. Avoid trash dumps in line construction & avoid smoke from dumps 28. Relocate staggings area when driving conditions warrant. 29. Air Attack and/or lead plane will always be in the air to coordinate aircraft.	
											13. Ensure any burnout operations have been clearly communicated to ALL, prior to burning. 14. Ensure GOOD tailgate briefings with resources unable to attend Operational Briefing (Include Ops, Logs, Fin & Plans info.). 15. Scout ahead of tractor operations to avoid making contact with power poles and guide wires when tying into roads. Power companies are working in some DIVS, avoid all down lines as they may become charged.							30. Personnel on ground will stay out of drop zones. 31. Use spotter when backing vehicle(s). 32. Use bandanna to filter smoke in heavy smoke areas. 33. ALL vehicles and equipment must have lights on when running. Plastic colverts under some roads have burned and are collapsing under heavy loads, DIVS will coordinate which roads transport and tractors will use. GSP (912) 287-6500 : EMA (912) 287-4499.
