SAFETY MESSAGE

Incident:

Georgia Bay Complex

Date:

May 26, 2007

Time:

Day & Night Shift

Major Hazards and Risks:

◦ Weather

◦ Air Operations

◦ Accountability

◦ Fire Behavior

◦ Driving

◦ Complacency

◦ Reburn Potential

◦ Holiday Traffic

Fire behavior is predicted to be less intense today. Winds will be gusty in the afternoon and can still push the fire. Remain aware, plan and act accordingly. Maintain LCES at all times!

Know and account for personnel assigned to you and ensure you make contact with them. Crews also make the connection with your supervisor. **Receive a briefing prior to line assignments!**

Utilization of aircraft in these conditions requires everyone to be heads up, please remember to adhere to the basic air operations safety guidelines. Ensure that communications are maintained (know you're air to ground frequency) and that proper distance is given to working aircraft.

Memorial Day weekend is upon us, so expect heavier traffic and congestion on major highways as well as "sight seers" interested in the fire show.

Stop! Look! Listen! Live! Watch for multiple tracks at railroad crossings where there are no traffic guards.

Reburns are still a potential. Evaluate escape routes and safety zones with this in mind.

Complacency may be starting to rear its ugly head as minor accidents are beginning. Wear PPE's; including goggles when mopping up for complete protection from debris blowback when spraying spots. Be aware of what's happening near you!

SAFETY OFFICERS: Michael Huffman, Mark Luellen, Ronnie Hamm, Harry Kepler, Steve Snider, Tim Sampson, John Orton, Andy Meadows, Larry Miller, Pete Stewart, Rodney Bell, Jerry Dombrowske, Paul Boucher, and Keith Jenkins

Fire Behavior Forecast

<u>Forecast No. 36</u>	<u>Prediction for Day Shift</u>
<u>Name of Fire: Ga Bay Complex /Sweat Farm Rd.</u>	<u>Shift Date: Saturday May 26, 2007</u>
<u>Time and Date Forecast Issued</u> <u>1800 hrs 5/25/2007</u>	<u>Signed : Gary Curcio</u> <u>Fire Behavior Analyst</u>

Weather Summary (See Today's Detailed Weather Forecast in the IAP):

The RH recovery is still not at a level where it needs to be. So again, there was no meaningful impact to fuel moistures. We very fortunate yesterday to avoid extreme fire behavior for most of the day. Moderate surface winds, a "non-adverse" Fire Behavior wind profile, & a surprising cloud cover that persisted through most of the peak burning period and reduced fuel temperatures, all acted together to reduce the opportunity for extreme fire behavior. This lasted until 1700hrs. With breaking of cloud cover & rising fuel temps, the fire spotted Suwannee Chapel Rd.

For today's forecasted weather the windspeed is very favorable: early AM windspeed is < 5mph, eventually becoming E 5-10mph by 1100hrs & then, reaching a Max E 10mph @ 1500hrs. Air temps will reach 83 – 88 with RH's ranging from 32 - 43%.

With these windspeeds & other factors, fire behavior is not expected to be extreme. Beneficial cloud cover will be a key component for success.

General Fire Behavior: Yesterday's spotting of Suwannee Chapel Road was assisted by the breaking cloud cover & wind gusts > 12mph. For today, we are anticipating fire behavior that will capped in the morning until the inversion burns off. After inversion, the following behavior is expected:

<u>Fuels type</u>	<u>Spread</u>	<u>Flame</u>	<u>Spotting</u>
Young plantation 4 to 7ft tall	30 ch/hr	8 –12 ft.	500 ft.
Pine Plantation w/ southern rough	10 ch/hr	4 – 6 ft.	500 ft.

Specific Fire Behavior:

Any new spot fires or slop-overs need to be promptly initial attacked. This action does not allow fires to build & thereby, allow their energy to define the fire environment. Fire flanks can be safely worked. Prompt & timely use of aerial resources can assist and ensure success in this effort. If there are unforeseen delays in suppression & building smoke column occurs, then there are opportunities for extreme fire behavior where fires can spread at 45 ch/hr., with 15-ft flame lengths and spotting up to ¼ mi.

Roundabout & Kneeknocker Fires: Are becoming less a threat for sleepers or reburn potential. Kneeknocker still has persistent organic soil areas burning. The lowering of the forecasted windspeeds, will further reduce the risk of these fires.

Initial Attack: Fuels are still critically dry. New spot fires or breakovers can reach a critical level if allowed to build. Prompt, successful initial attack will eliminate this possibility.

Air Operations: Moderate inversion & the smoke can limit aircraft visibility in the morning. Smoke production is still expected & visibility will improve as winds pick up. The western perimeters of the fires will be impacted by smoke production.

Safety: As fire behavior begins to transition to more normal levels, it is extremely important to be more observant. Take the time through the day to assess what is changing and why. Do not let your guard down.
