☐ SAFETY MESSAGE

Incident:

Georgia Bay Complex

Date:

May 27, 2007

Time:

Day & Night Shift

Major Hazards and Risks:

◦ Weather

◦ Air Operations

◦ Accountability

◦ Fire Behavior

◦ Driving

◦ Hydration

◦ Reburn Potential

◦ Holiday Traffic

Fire behavior is predicted to be as intense as experienced yesterday. Winds will be gusty in the afternoon and can still push the fire. Remain aware, plan and act accordingly. Maintain LCES at all times!

Know and account for personnel assigned to you and ensure you make contact with them. Crews also make the connection with your supervisor. **Receive a briefing prior to line assignments!**

Memorial Day weekend is upon us, so expect heavier traffic and congestion on major highways as well as “sight seers” interested in the fire show.

New personnel arrivals to the Incident: watch for multiple tracks at railroad crossings where there are no traffic guards. Drive alert and pay attention to the details.

Re-burns are still a potential. Know your escape routes and evaluate safety zones with this in mind.

With rising temperatures, dehydration can occur quicker. Start hydrating early in the day and continue through the day. Don't wait until you are thirsty to drink. It will be more difficult to recover. Pee often and pee clear!!

SAFETY OFFICERS: Michael Huffman, Mark Luellen, Ronnie Hamm, Harry Kepler, Steve Snider, John Orton, Andy Meadows, Larry Miller, Pete Stewart, Rodney Bell, Jerry Dombrowske, Paul Boucher, Keith Jenkins and Alan Alsobrook.

Fire Order #3:

Base all actions on current and expected behavior of fire!

Fire Behavior Forecast

<u>Forecast No. 37</u>	<u>Prediction for Sunday</u>
<u>Name of Fire: Ga Bay Complex /Sweat Farm Rd.</u>	<u>Operational Period: May 27, 2007</u>
<u>Time and Date Forecast Issued</u> <u>1800 hrs 5/26/2007</u>	<u>Signed : Gary Curcio</u> <u>Fire Behavior Analyst</u>

Weather Summary (See Today's Detailed Weather Forecast in the IAP):

The RH recovery still has had no meaningful impact to fuel moistures. Extreme fire behavior as far as a major run was almost avoided. Light AM winds, followed by moderate PM surface windspeeds, a "favorable" Fire Behavior wind profile, & developed scattered cloud cover, acted "synergistically" through most of the day to keep in check extreme fire behavior.

For today's forecasted weather the windspeed is very favorable: early AM windspeed is NE < 5mph, eventually becoming E 5-10mph by 1100hrs & then, reaching a Max SE 10mph gust to 15 after 1400hrs. Air temps will reach 85 – 90 with RH's ranging from 28 - 38%. With these windspeeds & other factors, fire behavior is not expected to be extreme until towards the end of the critical period (starting at 1830hrs.)

General Fire Behavior: Fire behavior will remain capped until the inversion burns off at 1000 hrs. The fire's activity level stepped it up & got going at 1330hrs. This was the case in point along the Division WP, at Byrd Rd. & Spooner Loop, and along Division WH. Torching, short-lived crowning & impressive flame lengths by the green "bay type fuels" were observed. We are anticipating this same activity level today starting at 1330hrs. These spread rates below are for the respective fuel models. They need to be used for time distance planning and thereby, stay ahead of the fire's spread when considering the placement of new line location. The majority of the fire's spread yesterday covered 320 chains in 6 hours for a spread distance of 53 ch/hr. The individual spread rates for the areas representative fuels during the peak critical burning period are:

<u>Fuels type</u>	<u>Spread</u>	<u>Flame</u>	<u>Spotting</u>
Young plantation 4 to 7ft tall	30 ch/hr	8 –12 ft.	500 ft.
Pine Plantation w/ southern rough	10 ch/hr	4 – 6 ft.	500 ft.
Isolated Bays with hi shrub Pine & Cypress	45 ch/hr	15 –20 ft.	up to ¼ mi.

Specific Fire Behavior:

Any new spot fires or slop-overs need to be promptly initial attacked (IA). Prompt & timely coordinated use of aerial resources can ensure success in this effort. If there are unforeseen delays in IA, fires will begin to build and frequent spotting and increases in spread distance occurs. The mixing layer was punched through by the wildfire around 1830hrs. This facilitated long distance spotting. This is what in part also sustained the fire's spread on Tuesday. Spread distance reached 105 chains per hour. Under these conditions only time of day or changes in fuels, provide the opportunity to catch these fires.

Roundabout & Kneeknocker Fires: Situation remains the same as these fires become less a threat for sleepers or reburn potential. Kneeknocker still has persistent organic soil areas burning. The lowering of the forecasted windspeeds, will assist keeping these fires in check.

Air Operations: Moderate inversion & the smoke can limit aircraft visibility in the morning. Smoke production is still expected & visibility will improve as winds pick up. The western perimeters of the fires will be impacted by smoke production.

Safety: As fire behavior begins to transition to more normal levels, it is extremely important to be more observant. Do not let your guard down. For the new folks on the fire ask you peers about the **critical burning period "1430 – 2000hrs."**
