Fire Behavior Forecast

<u>Forecast No. 42</u>	<u>Prediction for Friday</u>
<u>Name of Fire: Ga Bay Complex /Sweat Farm Rd.</u>	<u>Operational Period: June 1st, 2007</u>
<u>Time Issued: 1800 hrs</u>	<u>Signed : Gary Curcio</u>
<u>Date Forecast Issued: 5/31/2007</u>	<u>Fire Behavior Analyst</u>

Weather Summary (See Today's Detailed Weather Forecast in the IAP):

The air mass moisture is slowly improving. Unfortunately, the RH recovery is still not where it needs to be. Today's weather will bring the same wind pattern & speeds. It will very favorable in the morning (CALM early AM & then E 5 -9 mph by 1000hrs. During the peak burning period, 1300 to 1900hrs, the winds are again E 8 -12 mph w/ G to 17 mph.

Cloud Cover can provide a positive impact to FB. It can cap activity through decreased Air Temp, Fuel Temps, & higher RHs.

General Fire Behavior:

Yesterday, Bugaboo Scrub 2's fire perimeter expanded for the 2nd straight day. Division WI's breakover went across Hwy 177 attempting to make its way to the Suwannee River drainage. Thinning cloud cover appeared over the portion of this fire as temperatures exceeded forecasted ranges. This warmer & drier air was not anticipated & as a result, the fire was making its spread under better burning conditions. Thick clouds did remain over the northern portion, the Sweat Farm Fire. However, burning conditions were better than forecasted.

Today's probability of ignition is at 50%. Because windspeeds start earlier, the critical burning window will extend from 1300 to 1900 hrs. Fire runs are approachable from the flanks. Hitting flare-ups or new fires with aerial suppression resources followed up with ground fire suppression resources are essential to keep this fire contained. Below is the expected fire behavior for respective fuel models. These can assist in time distance planning.

Specific Fire Behavior: All Fire & All Branches

<u>Fuels type</u>	<u>Spread</u>	<u>Flame</u>	<u>Spotting</u>
Young plantation 4 to 7ft tall -----	40ch/hr (trend + 10)	15 - 20 ft.	500 ft.
Isolated Bays with hi shrub Pine & Cypress	same as above	same as above	¼ mile to ½ mile
Pine Plantation w/ low & sparse southern rough*	14 ch/hr (trend + 5)	4- 8 ft.	500 ft.

**note when the southern rough is > 4 ft tall these plantation are can easily support crown fire runs.*

All Fires: Forest fuels are still dangerously dry. All containment lines on all fires need to be reviewed for threat of sleepers or reburn potential. If these fuels are exposed to sunny skies and wind, they will rapidly flare up.

Air Operations: The lighter inversion & its quicker breakup should permit the earlier use of aircraft. Calm winds and smoke production will generate very poor visibility in the AM. Extreme needs to be exercised until visibility improves for air operations and ground vehicle traffic. All western fire perimeters remain impacted by smoke production.

Safety:

Yesterday's fire's spread shows how a slight change in burning conditions can increase the energy release of a fire and bring these areas of intense heating to life. Remember this situation. STAY ALERT to your changing environment.

TAILGATE BRIEFING SHEET

☐ SAFETY MESSAGE

Incident:

Georgia Bay Complex

Date:

June 1, 2007

Time:

Day & Night Shift

Major Hazards and Risks:

◦ Weather

◦ Air Operations

◦ Hydration

◦ Fire Behavior

◦ Driving

◦ Accountability

◦ Reburn Potential

◦ Snags

◦ Visibility

Mostly cloudy conditions and moderate relative humidity are expected. Temperatures will be warm again today with possible showers and thunderstorms and breezy conditions later in the day. You need to remain aware of what the fire is doing in your area, especially in the late afternoon. Plan and act accordingly. Maintain LCES at all times!

Accountability; it is very important to know and account for all personnel assigned to you. *Accountability*; it's a two way street. *Accountability*; personnel must receive a briefing prior to line assignments from your Division Supervisor. *Accountability*; know what to expect and you won't be surprised when it happens.

Be alert and pay attention to the details. There are logging operations in Sweet Farm Branch using the same narrow roads as you. Watch your speed especially as you travel by others. Visibility can also be extremely poor over night and in the early morning time frame due to fog, smoke, and dust. If we do receive any significant rain in the next few days, the woodland road conditions will become very sloppy.

Reburns are still a potential. **Know where your escape routes and safety zones are located.**

Snags are present, so be alert to any in your assignment area. Trees growing in peat soils can have weakened and burnt roots due to under ground burning that may allow them to fall without warning.

As always, fluid intake is important. Start hydrating early in the day before the morning briefing and continue throughout the day. Don't wait until you're thirsty to drink because it will be more difficult to recover. Rehydration is enhanced when fluids contain sodium and potassium, or when foods with these electrolytes are consumed along with fluid.

SAFETY OFFICERS: Michael Huffman, Mark Luellen, Larry Miller, Jerry Dombrowske, Paul Boucher, Pete Stewart, Keith Jenkins, Alan Alsobrook, Roy Leach, David Benavitch, Tim Oliverius, Al Augustine, Sam Wilbanks, Phillip Spor, and James Burton.

Fire Order #8:

Give clear instructions and insure they are understood.

Watch Out Situation # 6:

Instructions and assignments not clear.

Human Resource Message

“Personal Boundaries.”

Personal boundaries are developed through our attitudes, beliefs, and thoughts as well as from family, religion and society. Do you know your personal boundaries? Do you need personal space? What is your comfort level in describing your boundaries to others? Some guidelines to follow: (1) respect each others requests for personal space, (2) listen closely to each other’s needs, and (3) know when to communicate your own needs to others. Please let us know if you have any issues, questions, or concerns.
