Fire Behavior Forecast

<u>Forecast No. 46</u>	<u>Prediction for Sunday</u>
<u>Name of Fire: Sweat Farm Road/Bugaboo Scrub 2</u>	<u>Operational Period: June 5th, 2007</u>
<u>Time Issued: 1400 hrs</u> <u>Date Forecast Issued: 6/4/2007</u>	<u>Signed : Gary Curcio</u> <u>Fire Behavior Analyst</u>

Weather Summary:

Yesterdays scattered thunderstorm development generated shower activity. Some fire areas received trace amounts while other areas like Manor & Homerville received as much as ½ inch to 7/10ths of an inch of rain. The rainfall also generated higher RHs. The combined positive impact inhibited new fire starts and re-burn potential.

General Fire Behavior:

Yesterday's fire behavior was limited to the organic soils or hot spots along the firelines. This activity was centered on Divisions WI, WH, WG, & WW. The Gum Maple Bay Swamp fuel type in these Divisions contains areas that will support ground fire. Follow-up in-stand examinations of this fuel type revealed that the surface litter and duff layer are too moist to support future burn out operations even though there is active ground fire.

Surrounding Pine Plantations (4 to 7 ft tall pine saplings with grass & low shrubs or Sawtimber sized plantations with southern shrub evergreen species 4 to 6 ft. tall) were tested and can support surface fires within 1 day following a significant rainfall event. Yesterday's additional rains that were received from thunderstorm activity further dampened & eventually removed these fuels from being capable to ignite. Remember with just one day of excellent drying fuels will be available to burn. Favorable wind directions will exist today: SW – AM & then WSW – PM. These wind directions reduce the possibility of fire escapes from "hot" Divisions. The Probability of Ignition is 20%. The following Fire Behavior is being provided to assist in time distance operational planning.

Specific Fire Behavior: All Fires & All Branches especially

<u>Fuels type</u>	<u>Spread</u>	<u>Flame</u>	<u>Spotting</u>
Young pine plantation 4 to 7ft tall with grasses dominating	12ch/hr	3-5 ft.	200 ft.

Isolated Bays with hi shrub

These will be very difficult to ignite since they will retain the beneficial influence of the rain from Friday's rain event as well as the showers from yesterday afternoon.

**Pine & Cypress
Pine Plantation
w/ low & sparse
southern rough***

same as above

**note when the southern rough is > 4 ft tall these plantations can easily support crown fire runs.*

Air Operations:

There are no restrictions on air operations as the skies will be clear. There will be the development of cumulus clouds. Smoke production is expected to be very minimal. Aircraft should be advised that there will be less erratic winds, but thunderstorms development is possible after in the afternoon.

Safety:

Areas of deep duff or organic burning have tree root systems that are weakened. These trees will be a hazard even without the influence of wind. Wind gusts associated with the thunderstorms are predicted to be > 30 mph. Stay alert to this serious safety hazard.

TAILGATE BRIEFING SHEET

☐ SAFETY MESSAGE

Incident:

Sweat Farm/Bugaboo Scrub II

Date:

June 5, 2007

Time:

Day Operational Period

Major Hazards and Risks:

◦ Weather

◦ Lightning

◦ Accountability

◦ Snags

◦ Driving

◦ Footing

◦ Wildlife

Tropical Storm Barry brought us significant rainfall amounts Saturday. Partly cloudy hot weather with moderate winds and moderate relative humidities will bring gradual drying. There is a chance of scattered showers and thunderstorms. Refer to page 75 in your Incident Response Pocket Guide for lightning mitigation. Plan and act accordingly. Maintain LCES at all times!

In the mop-up process, wear your PPE. Wear eye protection as needed, as eye injuries are common.

Snags are present, so be alert to any in your assignment area. Trees growing in peat soils can have weakened and burnt roots due to under ground burning that will allow them to fall without warning. Park vehicles a safe distance away from trees. Roads can be blocked quickly by falling trees and snags. If you are working around pumps, post a lookout for these snags. Following the storm, trees may have fallen across the roads. Predicted winds will increase the likelihood of snags falling. Maintain safe driving speeds and distances.

While driving, soft road shoulders and sloppy off road conditions could be a problem. Watch your footing on equipment and slippery ground surfaces.

Following the recent rains, snakes and alligators are out in force. Remain aware of your surroundings and maintain a safe distance from the local wildlife.

SAFETY OFFICERS: Michael Huffman, Mark Luellen, Larry Miller, Paul Boucher, Pete Stewart, Keith Jenkins, Alan Alsobrook, Roy Leach, David Benavitch, Al Augustine, Sam Wilbanks, Phillip Spor, James Burton, Larry Klock, Charlie Shelby, Jerry Dombrowske, Don Ranney, and Charles Wood

Fire Order #10:

Fight fire aggressively, having provided for safety first.

Watch Out Situation #4:

Unfamiliar with weather and local factors influencing fire behavior.

“Transitions”

Today is a transition day for the North Carolina IMT and the Georgia IMT. The Georgia Team was the one first assigned to this incident and a lot has happened while they have been gone. What is important today – and whenever we assume the lead from others – is that we transition smoothly. Smooth transitions involve (1) appreciating the efforts of those before you, (2) communicating openly in order to understand the present circumstances, and (3) trusting in one another to always do our best. It is essential that we work together to ensure a smooth transition. Be safe and have a great day!
