Honey Prairie Complex GA-OKR-000001

INCIDENT &CTION PLAN

Operational Period

Sunday

August 28, 2011 0800-2000

Incident Commander
Trent Ingram
Kris Butler(T)

Accounting Codes

FWS - 9141-F25M-2J NPS - 5023 F25M E11 BLM - F25M USFS - PRF25M 1502

Initial Attack - F4PM

Letter from GFC Incident Commander:

To: All Honey Prairie Incident Personnel

As A Georgia Forestry Commission Type 3 Incident Commander, I am committed to a policy of "zero tolerance" of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated.

Guidelines on in-appropriate behavior both "on Duty" and "off Duty" while assigned are addressed within each agencies policies. Our Team expects all incident personnel to follow established government policies for behavior along with all Illegal drug and alcohol directives.

Our Incident Management Team endorses and supports an attitude of mutual respect for all personnel and the public we serve.

We expect a strong work ethic and an attitude of Safety at all times!

Sincerely,

/s/ Trent Ingram

Incident Commander Georgia Forestry Commission Type 3 Incident Management Team

7. Control Operations

- Respond to Initial Attack as requested
- Patrol and control reburn
- Initial attack IC will communicate sizeup information to the Honey Prairie communication.
- Make contact with the resource advisor before using mechanical equipment.
- Improve swamp break boundaries for fire breaks, work with resource advisor.

8. Special Instructions

- Ensure LCES are in place before operations begin. Stay hydrated.
- Drive defensively with lights on at all times.
- Boggy terrain: Be careful and aware when working around this type of area.

Fire Weather Forecast

FORECAST NO: 113 **NAME OF FIRE:** Honey Prairie Complex

PREDICTION FOR: Day Shift UNIT: Okefenokee National Wildlife Refuge

SÚNDAY 8/28/11 SHIFT DATE:

FORECAST ISSUED: 8/27/11 at 1600 SIGNED: Coleen Decker, IMET

WEATHER DISCUSSION: Dry, sinking air behind Hurricane Irene will bring near-record high temperatures today and Monday. With relative humidity well below 30% by late afternoon, heat indices will not be guite as high as they were recently when the tropical airmass was in place. Winds today and tomorrow will be from the Southwest but considerably lighter than the past few days.

TODAY: Sunny and dry.

MAXIMUM TEMPERATURES: 98-101° PM HEAT INDEX: 100° MINIMUM HUMIDITY: 26-30%

20 FT WINDS: AM: SW 5-8 mph

PM: SW 8 to 10 with gusts 12 to 15 mph

STABILITY/INVERSION: 6500 feet TRANSPORT WINDS: SW 15 mph **DISPERSION INDEX:** 75, Very Good

CHANCE OF PRECIPITATION: 0% PRECIPITATION AMOUNTS: 0 LIGHTNING ACTIVITY LEVEL: 1

TONIGHT: South-Southwest winds 5 to 8 mph. Low temperatures 73 to 75°. Max humidity 95%.

MONDAY: Mostly sunny and remaining hot.

MAXIMUM TEMPERATURES: 95-99° PM HEAT INDEX: 100-105° MINIMUM HUMIDITY: Around 30 %

SSW 5-8 mph with gusts up to 12 mph 20 FT WINDS:

STABILITY/INVERSION: 6000 feet TRANSPORT WINDS: S 10 mph **DISPERSION INDEX:** 70, Very Good

CHANCE OF PRECIPITATION: 0% LIGHTNING ACTIVITY LEVEL: 1

EXTENDED FORECAST: Temperatures will return to more seasonal norms as the afternoon sea breeze returns. This will allow onshore moisture flow for an increased chance of thunderstorms by mid-week.

	TUESDAY	WEDNESDAY	THURSDAY
SKY/WEATHER	Partly Cloudy Slight Chance of Thunderstorms	Partly Cloudy Chance of thunderstorms	Partly Cloudy Chance of thunderstorms
PRECIP	10%	20%	30%
20 FT. WINDS	PM: ENE5-8 mph	PM: NE 5-8 mph	PM: NE 5-8 mph
MIN/MAX TEMPS	72/ 93	72/ 93	72/ 93

FIRE BEHAVIOR FORECAST							
Fire: Honey Prairie Complex Unit: GA-OKR-000001 Prediction for Day Shift							
Forecast #112 Issued: 08/27/2011 1830 hrs	Signed: Anthony Petellat	Shift Date: Sunday 08/28/2011					

GENERAL FIRE BEHAVIOR

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

Indicators/Threshold for Increased Fire Activity

- Relative humidity dropping below 45%
- Winds above 10 mph
- Heavy fuel loadings

- Fine dead fuel moisture 8% or less
- Dispersion above 70
- * Items in BOLD are predicted to occur today*

SPECIFIC FIRE BEHAVIOR

- Interior smoldering and some flare ups are possible, especially if winds increase.
- Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths.
- LIGHTNING ACTIVITY LEVEL 1

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 3 - 6 mph				
Shrub Fuels – SH4	4 – 6 ch/hr	1 - 2 feet	1/10 – 2/10 MILE	69%
Heavy Southern Rough- SH8	8 – 12 ch/hr	6 - 8 feet	1/10 – 2/10 MILE	69%
Timber Litter-Reburn TL8	3 – 5 ch/hr	2 - 3 feet	1/10 – 2/10 MILE	69%
Small Pine Plantation w/grasses	9 – 15 ch/hr	4 - 5 feet	1/10 - 2/10 MILE	69%
GR5				

One hour fine dead fuel moisture is at 5% for SUNDAY: Areas remain dry and burning continues. 1,000 hour fuels are drier than normal for this time of year. There is re-burn potential; mainly on the west side of the fire due to the amount of needle cast, fallen trees and scorched shrubs. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. In areas where fuels have been herbicided, expect quick ignitions, extreme heat, quicker rates-of-spread, and possible group tree torching potentially producing spotting problems.

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

All Divisions:

The fire continues a slow spread through the thick bays and muck soils. Roots and fallen trees are protecting heat sources allowing the fire to burn organic soils from the bottom up. Be heads-up for falling trees.

Air Operations: Expect possible areas of smoke.

SAFETY:

<u>WINDS</u> – Stay abreast of changing wx conditions throughout the entire shift. <u>THUNDERSTORMS</u> - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. Live Trees/SNAGS – are falling in all Divisions – will be influenced by Thunderstorm outflow winds. FUELS: Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor, re-burn is still possible. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. 100 and 1000 hour fuels are still below average in moisture content. Stay focused, and put LCES in place before starting operations. *Energy Release Component (ERC) is running near average for this time of year.*

HEALTH AND SAFETY MESSAGE

SAFETY starts with **YOU**

We are ALL accountable for SAFE behaviors

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.

Fire Information IAP messages

- 1. Public and firefighter safety remains the top priority for this incident.
- 2. Fire managers for the refuge have coordinated suppression efforts with the Georgia Forestry Commission and the Greater Okefenokee Association of Landowners (GOAL) representing federal and state agencies, industry and private landowners. Through this Unified Command, the partners support the chosen strategy as the appropriate management response to protect adjacent valuable commercial timber, isolated homes scattered on private land, and critical wildlife habitat for threatened and endangered species.
- 3. Fire is a natural component of the Okefenokee ecosystem; since the refuges creation in 1937, there have been hundreds of wildfires that have burned thousands of acres here. The plants and animals on the refuge are well adapted to survive periodic wildfires.
- 4. Past experience has shown that conventional fire suppression tactics do not work well inside the swamp. Humans have never been successful in controlling fires within the swamp; only "mother nature" has done this. Attempting suppression within the swamp is ineffective, costly, wastes firefighting resources and needlessly endangers firefighter safety.
- 5. Fire on the refuge is usually fought by reinforcing firelines along the Swamps Edge Break, including areas of private land, to keep the fire contained within the swamp.
- 6. Okefenokee National Wildlife Refuge typically employs a contain and control strategy to manage fire; containing it within the swamp and actively suppressing it outside of the swamp in the upland forest.

Commonly asked question:

1. Why won't this fire go out? What will it take? Surface burning of available fuels is only part of the current problem. Peat beds (partially decayed vegetation normally floating in a vertical column of water) is what supports these surface fuels. Unfortunately, the current dry conditions have allowed a portion of the peat beds to dry out and the surface burn has transferred into the peat beds and is now burning subsurface. There are now two sources of heat and available fuel that must be extinguished. The current spotty, localized rain storms can have some effect on the surface burns but do not do much to control subsurface burns. It will take a big rain storm blanketing the entire swamp (remember the swamp is huge –over 650 square miles in size) dropping a minimum of 6-8 inches of rain. As the water levels in the swamp slowly rise as a result of the rain, the peat beds will become water saturated again eliminating one source of the fire. As the surface of the swamp becomes covered by water, burning surface fuels will be extinguished as well. Burning fuels that extend above these water levels (dead and drying trees/shrubs) may continue to burn until they fall over or burn up. Fire that exists in upland habitat on islands within the swamp may also continue to burn but it will be confined to that immediate area by the swamp waters surrounding the island. This is not something that will likely occur overnight. It may take days, weeks, or even months. The refuge has experienced fire events that were not declared officially out for well over a year after the main firefighting effort had ceased.
