Letter from GFC Incident Commander:

To: All Honey Prairie Incident Personnel

As A Georgia Forestry Commission Type 3 Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated.

Guidelines on in-appropriate behavior both “on Duty” and “off Duty” while assigned are addressed within each agencies policies. Our Team expects all incident personnel to follow established government policies for behavior along with all Illegal drug and alcohol directives.

Our Incident Management Team endorses and supports an attitude of mutual respect for all personnel and the public we serve.

We expect a strong work ethic and an attitude of Safety at all times!

Sincerely,

/s/ Steve Gray

Incident Commander
Georgia Forestry Commission Type 3 Incident Management Team

INCIDENT OBJECTIVES	1. INCIDENT NAME Honey Prairie Complex	2. DATE PREPARED 8/19/11	3. TIME PREPARED 1700												
4. OPERATIONAL PERIOD (DATE/TIME) Saturday, August 20, 2011 0800 – 2000															
5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES) <ol style="list-style-type: none"> 1. Provide for safety of incident personnel and public in all incident operations. 2. Maintain a positive working relationship with all adjacent landowners, cooperators State and Federal partners. Inform, involve and communicate incident planning and operations with all partners. 3. Contain all fires that are within the Okefenokee National Wildlife Refuge, inside the Refuge and/or inside the swamp edge break if possible. 4. In cooperation with local land owners and communities, use full suppression strategies and tactics to minimize damage to private timberlands and structural improvements and to prevent fires outside the Refuge from entering the Refuge. 5. Assist in management and suppression of additional fires (new starts or breakouts) in the vicinity as approved by Agency Administrators and Incident Commander. 6. Protect all cultural and archeological sites and structures within the refuge. 7. Manage the fires cost-effectively consistent with the values at risk. 8. Coordinate suppression actions with assigned Refuge Resource Advisors 															
6. WEATHER FORECAST FOR OPERATIONAL PERIOD See attached forecast for area specific weather information.															
7. GENERAL SAFETY MESSAGE Drive defensively and use spotter when backing. Ensure LCES is in place and known by all personnel. Drink plenty of water and take frequent rest breaks. Ensure proper use of PPE during all operations.

FIRE BEHAVIOR FORECAST

Fire: Honey Prairie Complex	Unit: GA-OKR-000001	Prediction for Day Shift
Forecast #104 Issued: 08/19/2011 1830 hrs	Signed: Anthony Petellat	Shift Date: Saturday 08/20/2011

GENERAL FIRE BEHAVIOR

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

Indicators/Threshold for Increased Fire Activity

- **Relative humidity dropping below 45%**
- Winds above 10 mph
- **Heavy fuel loadings**
- **Fine dead fuel moisture 8% or less**
- Dispersion above 70
- *** Items in BOLD are predicted to occur today***

SPECIFIC FIRE BEHAVIOR

- Interior smoldering and some flare ups are possible, especially if winds increase.
- Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths.
- **LIGHTNING ACTIVITY LEVEL 3**

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 3 - 6 mph				
Shrub Fuels – SH4	1 – 2 ch/hr	1 - 2 feet	0 – 1/10 MILE	51%
Heavy Southern Rough- SH8	2 – 5 ch/hr	3 - 5 feet	0 – 1/10 MILE	51%
Timber Litter-Reburn TL8	1 – 2 ch/hr	1 - 2 feet	0 – 1/10 MILE	51%
Small Pine Plantation w/grasses GR5	2 – 5 ch/hr	2 - 3 feet	0 – 1/10 MILE	51%

One hour fine dead fuel moisture is at 7% for SATURDAY: Areas remain dry and burning continues. 1,000 hour fuels are drier than normal for this time of year. There is re-burn potential; mainly on the west side of the fire due to the amount of needle cast, fallen trees and scorched shrubs. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. **In areas where fuels have been herbicided, expect quick ignitions, extreme heat, quicker rates-of-spread, and possible group tree torching potentially producing spotting problems.**

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

All Divisions:

The fire continues a slow spread through the thick bays and muck soils. Roots and fallen trees are protecting heat sources allowing the fire to burn organic soils from the bottom up. Be heads-up for falling trees.

Air Operations: Expect possible areas of smoke.

SAFETY:

WINDS – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS** - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **Live Trees/SNAGS** – are falling in all Divisions – will be influenced by Thunderstorm outflow winds. **FUELS:** Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor, re-burn is still possible. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. 100 and 1000 hour fuels are still below average in moisture content. Stay focused, and put LCES in place before starting operations. *Energy Release Component (ERC) is running near average for this time of year.*

8. Medical Emergency Procedures

Identify any EMTs and Paramedics in your crews. All medical emergencies will be reported to the Division Supervisor who will assume command and notify Line Medics.

On scene personnel will:

1. Provide medical care & stabilize patient.
2. Call 911 if possible and provide the information requested.
3. Notify Communications via radio over Command Channel
4. Communications will clear radio traffic for medical emergency.
5. Communications will confirm 911 has been notified coordinate with IC, SOF.
6. DIVS will notify the Field Ops Section Chief.

MAJOR EMERGENCIES – Secure the area and identify witness for later investigation. Keep an accurate log of events. NOTE: Do not give Patients Name over the radio!

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.

Honey Prairie Fire Incident Information

Here are some key point that we like to make when discussing this fire with the public.

1. Public and firefighter safety remains the top priority for this incident.
2. Past experience has shown that conventional fire suppression tactics do not work well inside the swamp. Humans have never been successful in controlling fires within the swamp; only “mother nature” has done this. Attempting suppression within the swamp is ineffective, costly, wastes firefighting resources and needlessly endangers firefighter safety.
3. Fire on the refuge is usually fought by reinforcing firelines along the Swamps Edge Break, including areas of private land, to keep the fire contained within the swamp.
4. Homeowners and other land owners can minimize the potential for damage to their homes by creating defensible space through firewise landscaping, thinning, etc..
5. Fire enhances the health of the Okefenokee ecosystem and is a force of nature that sustains the diversity and richness of a wide variety of species that makes the Okefenokee a world-famous ecosystem and natural area.
