Letter from Honey Prairie Incident Commander:

To: All Honey Prairie Incident Personnel

As a Type 3 Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated.

Guidelines on in-appropriate behavior both “on Duty” and “off Duty” while assigned are addressed within each agencies policies. Our Team expects all incident personnel to follow established government policies for behavior along with all Illegal drug and alcohol directives.

Our Incident Management Team endorses and supports an attitude of mutual respect for all personnel and the public we serve.

We expect a strong work ethic and an attitude of Safety at all times!

Sincerely,

/s/ Shawn Pearson

Incident Commander  
Type 3 Incident Management Team

<b>INCIDENT OBJECTIVES</b>	<b>1. INCIDENT NAME</b> Honey Prairie Complex	<b>2. DATE PREPARED</b> 11/15/11	<b>3. TIME PREPARED</b> 1700
<b>4. OPERATIONAL PERIOD (DATE/TIME)</b>  November 16, 2011 0700 – 1900			
<b>5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES)</b> 1. Provide for safety of incident personnel and public in all incident operations. 2. Maintain a positive working relationship with all adjacent landowners, cooperators, State and Federal partners. Inform, involve and communicate incident planning and operations with all partners. 3. Contain all fires that are within the Okefenokee National Wildlife Refuge, inside the Refuge and/or inside the swamp edge break if possible. 4. In cooperation with local land owners and communities, use full suppression strategies and tactics to minimize damage to private timberlands and structural improvements and to prevent fires outside the Refuge from entering the Refuge. 5. Assist in management and suppression of additional fires (new starts or breakouts) in the vicinity as approved by Agency Administrators and Incident Commander. 6. Protect all cultural and archeological sites and structures within the refuge. 7. Manage the fires cost-effectively consistent with the values at risk. 8. Coordinate suppression actions with assigned Refuge Resource Advisors			
<b>6. WEATHER FORECAST FOR OPERATIONAL PERIOD</b> See attached forecast for area specific weather information.			
<b>7. GENERAL SAFETY MESSAGE</b> Drive defensively and use spotter when backing. Ensure LCES is in place and known by all personnel. Drink plenty of water and take frequent rest breaks. Ensure proper use of PPE during all operations.

**SAFETY MESSAGE**  
**Firefighter Safety is our #1 Priority**

INCIDENT: Honey Prairie Fire

DATE:11/16/11 TIME: 0700-1900

***Complacency HURTS!***  
***DON'T BE COMPLACENT!!!***

**If it lives here, it Bites!** Snakes, ticks, alligators, bears, sand gnats and other critters are on the move so watch where you walk and check yourself for ticks daily. **Do not play or antagonize the wildlife!**

**Give driving your full attention!** Watch out for damaged or washed out section of road when traveling within the fire area. **DON'T STAND OR PARK IN THE ROAD!** Ensure daily maintenance checks are performed on all equipment and service as needed.

**Snags** – Higher wind speeds, soft soil from rain and previous fire damage combined will increase snag fall today. Scan areas that you park your vehicles and equipment, as well as, any area you are working for potential snags. Mitigate the ones you can do so safely and communicate ones you can't.

**WATCH OUT FOR THE DAY.....**

Ask yourself these questions multiple times during each day.

- ❖ Am I informed about the IAP?
- ❖ Do I know what steps to take in a medical emergency?
- ❖ Am I communicating clearly?
- ❖ Do I know the hazards I will encounter?
- ❖ Do I know when aircraft are in the area?
- ❖ Am I reporting changes in weather?
- ❖ Do I know who is in charge?
- ❖ Current and predicted weather known?
- ❖ Am I wearing all my PPE?
- ❖ Did I ask all my questions during the safety briefing?

**ALL ESCAPE ROUTES MARKED IN "PINK" FLAGGING**

**COMMUNICATION IS THE KEY**

***Derrick Heckman, SOF2 (T)***

INCIDENT ACTION PLAN SAFETY ANALYSIS										1. Incident Name Honey Prairie Fire		2. Date 11/16/2011		3. Time Day Shift		
LCES* Analysis of Tactical Applications Lookouts Communications Escape routes Safety zones										Other Risk Analysis						
Divisions										Other Risk Mitigations						
Indirect Fireline	Power lines / Snags	Road Conditions	Frontal Assault	Snags	Extreme Conditions	Railroad	Logging Operations	Wildlife, Insects	LCES Mitigations	Smoke	Traffic/Driving	Communications	Hunting season	Fatigue/Hydration	School Buses / Children	
1, 2, 3, 4, 5, 7, 8, 10, 14	2, 6, 11, 15, 17	12, 20, 26	1, 2, 3, 4, 5, 7, 10, 14	1, 2, 3, 4, 5, 7, 8, 10, 14, 17	7, 10	1	2, 3, 5, 6, 20, 21, 24	2, 23, 28	1. Establish & maintain LCES. Report LCES checks twice daily to DIVS on line & staging. 2. Look UP, DOWN and AROUND 3. Post experienced Lookouts. Make sure LCES is in place and make known. 4. Use Aerial Resources as Lookout if available.	24	12, 17, 19, 20, 22, 26, 27	1, 3, 10, 14, 19, 24, 25	29	16, 18, 21	26	16. Take adequate rest breaks and encourage to drink water NOW through briefings. 17. Defensive driving will be addressed in all briefings. 18. All personnel must meet the 2:1 work/rest ratio. Line supervisors and Safety will monitor closely. 19. Notify Operation and Safety of Railroad track issues to ensure safety of firefighters.
									5. Flag escape routes on right side of escape route facing outward. Create new escape routes as you progress and identify Safety Zones on the ground and maps. 6. Identify, mark & mitigate. 7. FBAN/Meteorologist to monitor weather updates and advisories. 8. Ensure Fireline is Anchored to black or manmade/natural barrier.						20. Ensure Traffic Planning is safe and enforced. Heed Defensive Driving techniques noted in Safety Messages. 21. Relocate staging area when driving conditions warrant. 22. Use spotter when backing vehicle(s). 23. For insects, use protective spray with deet on skin (Not on Nomex), permethrin can be used on nomex clothing	
									10. Keep Firefighters informed of any changes in predicted weather, consider at least a two day weather pattern when planning Strategic Firing operations. 11. Refer to IRPG, pg. 12 on Power Line Hazards. 12. Observe all traffic signals and speed limits. Drive with lights on. 14. Ensure GOOD tailgate briefings with resources unable to attend Operational Briefing (Include Ops, Logs, Fin & Plans info.).						24. Establish smoke/fog signs on roadways. Coordinate with Department of Transportation. 25. Follow establish communication plan, flight follow through dispatch 26. Watch-out for school buses and for children along the edge of roadway and crossing the road.	
									15. Scout ahead of tractor operations to avoid making contact with power poles and guide wires when tying into roads. Power companies are working in some DIVS, avoid all down lines as they may become charged.						27. Treat all intersections as 4-way stops 28. Bears, Gators, and some snakes are dangerous. Do not approach or feed wildlife at any time. 29. Wear Hunter safety vest at all times when in the fire area. Be respectful and aware of hunters in your area.

### FIRE BEHAVIOR FORECAST

<b>Fire name: Honey Prairie</b>	<b>Forecast # 1 Long Term</b>	<b>Prediction for: Oct, Nov, Dec 2011</b>
<b>Forecast Issued: October 2011</b>	<b>Signed: Troy Floyd FBAN</b>	<b>Shift Date; ALL</b>

**Weather Summary:** This fire behavior forecast is designed to be used with the daily fire weather forecast produced by the National Weather Service or field observations you take near the fire line.

**General Fire Behavior:** The Seasonal fire situation within and around the Okefenokee swamp has been driven by historic drought. Muck fuels within much of the swamp interior will continue to burn until substantial rainfall has occurred. Prolonged dry periods, periods with low RHs and High Winds will be the most probable situations for increased fire behavior. Major concerns are flare-ups that are near the containment lines threatening to spot or slop over onto the uplands. Pine Fuels and Southern Rough along the uplands are conducive to rapid rates of spread, torching, crowning and spotting.

**Instructions for use-** Start with second page to obtain your 1 hour Fuel moisture. Then use Charts below for outputs.

**Fuel Model (7) Southern Rough (Table Below)**

**Shrub Fuels (sh8) Palmetto and Galberry (Table Below)**

**Flame Lengths FM (7) Table Below**

**Flame Lengths (sh8) Table Below**

**To calculate Rates of Spread and Flame Lengths**

*Use the graphs above starting on the bottom with your 1 hr Fuel moisture, Trace upwards to the wind line then turn left to get your Rates of spread and Flame Lengths.\*\*\*Use next page to calculate your 1 hour fuel Moisture.*

**Reference Fuel Moisture**  
**Day Time**  
**0800 - 1959**

<b>1</b>	Relative Humidity (%)																				
	Dry Bulb Temp. (F)	0 - 4	5 - 9	10 - 14	15 - 19	20 - 24	25 - 29	30 - 34	35 - 39	40 - 44	45 - 49	50 - 54	55 - 59	60 - 64	65 - 69	70 - 74	75 - 79	80 - 84	85 - 89	90 - 94	95 - 99

**Dead Fuel Moisture Content Corrections**  
**Nov. Dec. Jan.**

<b>2E</b>		<b>EXPOSED</b>					
		Exposed - Less than 50% shading of surface fuels					
ASPCT	Slope	0800 to	1000 to	1200 to	1400 to	1600 to	1800 to
	S	L 0 - 30%	L 5	L 4	L 3	L 2	L 4
<b>2S</b>		<b>SHADED</b>					
		Shaded - Greater than or equal to 50% shading of surface fuels					
S	All	5	5	5	5	5	5

**Instructions to calculate 1 hour FDFM**

*Step (1) Use top table to get reference fuel moisture: Use predicted or taken weather OBS of temperature (Dry Bulb) and Relative Humidity. Follow the chart from left (Dry Bulb) and (RH) top of chart. In the numbers field where both meet you will get your Reference Fuel Moisture.*

*(2) Use the above table (2E) for exposed fuels or (2S) for shaded fuels or cloudy days. At the top of the table select time of day then to the left of the Table select 0-30% slope and locate your Fuel Moisture content correction number.*

*(3) Add your reference Fuel Moisture to the Dead Fuel moisture content correction. This will give you your 1hr FDFM.*

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.

## Fire Information IAP messages

1. Public and firefighter safety remains the top priority for this incident.
2. Fire managers for the refuge have coordinated suppression efforts with the Georgia Forestry Commission and the Greater Okefenokee Association of Landowners (GOAL) representing federal and state agencies, industry and private landowners. Through this Unified Command, the partners support the chosen strategy as the appropriate management response to protect adjacent valuable commercial timber, isolated homes scattered on private land, and critical wildlife habitat for threatened and endangered species.
3. Fire is a natural component of the Okefenokee ecosystem; since the refuges creation in 1937, there have been hundreds of wildfires that have burned thousands of acres here. The plants and animals on the refuge are well adapted to survive periodic wildfires.
4. Past experience has shown that conventional fire suppression tactics do not work well inside the swamp. Humans have never been successful in controlling fires within the swamp; only “mother nature” has done this. Attempting suppression within the swamp is ineffective, costly, wastes firefighting resources and needlessly endangers firefighter safety.
5. Fire on the refuge is usually fought by reinforcing firelines along the Swamps Edge Break, including areas of private land, to keep the fire contained within the swamp.
6. Okefenokee National Wildlife Refuge typically employs a contain and control strategy to manage fire; containing it within the swamp and actively suppressing it outside of the swamp in the upland forest.

### Commonly asked question:

1. Why won't this fire go out? What will it take? Surface burning of available fuels is only part of the current problem. Peat beds (partially decayed vegetation normally floating in a vertical column of water) is what supports these surface fuels. Unfortunately, the current dry conditions have allowed a portion of the peat beds to dry out and the surface burn has transferred into the peat beds and is now burning subsurface. There are now two sources of heat and available fuel that must be extinguished. The current spotty, localized rain storms can have some effect on the surface burns but do not do much to control subsurface burns. It will take a big rain storm blanketing the entire swamp (remember the swamp is huge –over 650 square miles in size) dropping a minimum of 6-8 inches of rain. As the water levels in the swamp slowly rise, as a result of the rain, the peat beds will become water saturated again eliminating one source of the fire. As the surface of the swamp becomes covered by water, burning surface fuels will be extinguished as well. Burning fuels that extend above these water levels (dead and drying trees/shrubs) may continue to burn until they fall over or burn up. Fire that exists in upland habitat on islands within the swamp may also continue to burn but it will be confined to that immediate area by the swamp waters surrounding the island. This is not something that will likely occur overnight. It may take days, weeks, or even months. The refuge has experienced fire events that were not declared officially out for well over a year after the main firefighting effort had ceased.

# Hunter Encounters and Confrontations

Hunting season is now open. Crews are likely to encounter hunters either hunting or scouting in the area of the Swamp Edge Break. Hunting is often done with the aid of dogs and the hunters will be chasing the pack in vehicles on narrow dusty roads to intercept game. Use Caution traveling as hunters may not be paying attention and traveling at excessive speeds.

Avoid contact as much as possible. The least amount of impact we have on their hunting area the better off we will be. Expect many questions about the fire operations and how long the fire will continue to burn. It's a good idea to review the Fire Information section of the plan for a good explanation of what to expect in the coming months. The majority of the hunters will be friendly but should you have a confrontation with someone:

1. Politely excuse yourself and leave the area immediately;
2. Notify your supervisor;
3. Notify the Security Manager by radio or phone:

SECM – Ryan Petersen 301-471-5173

Or

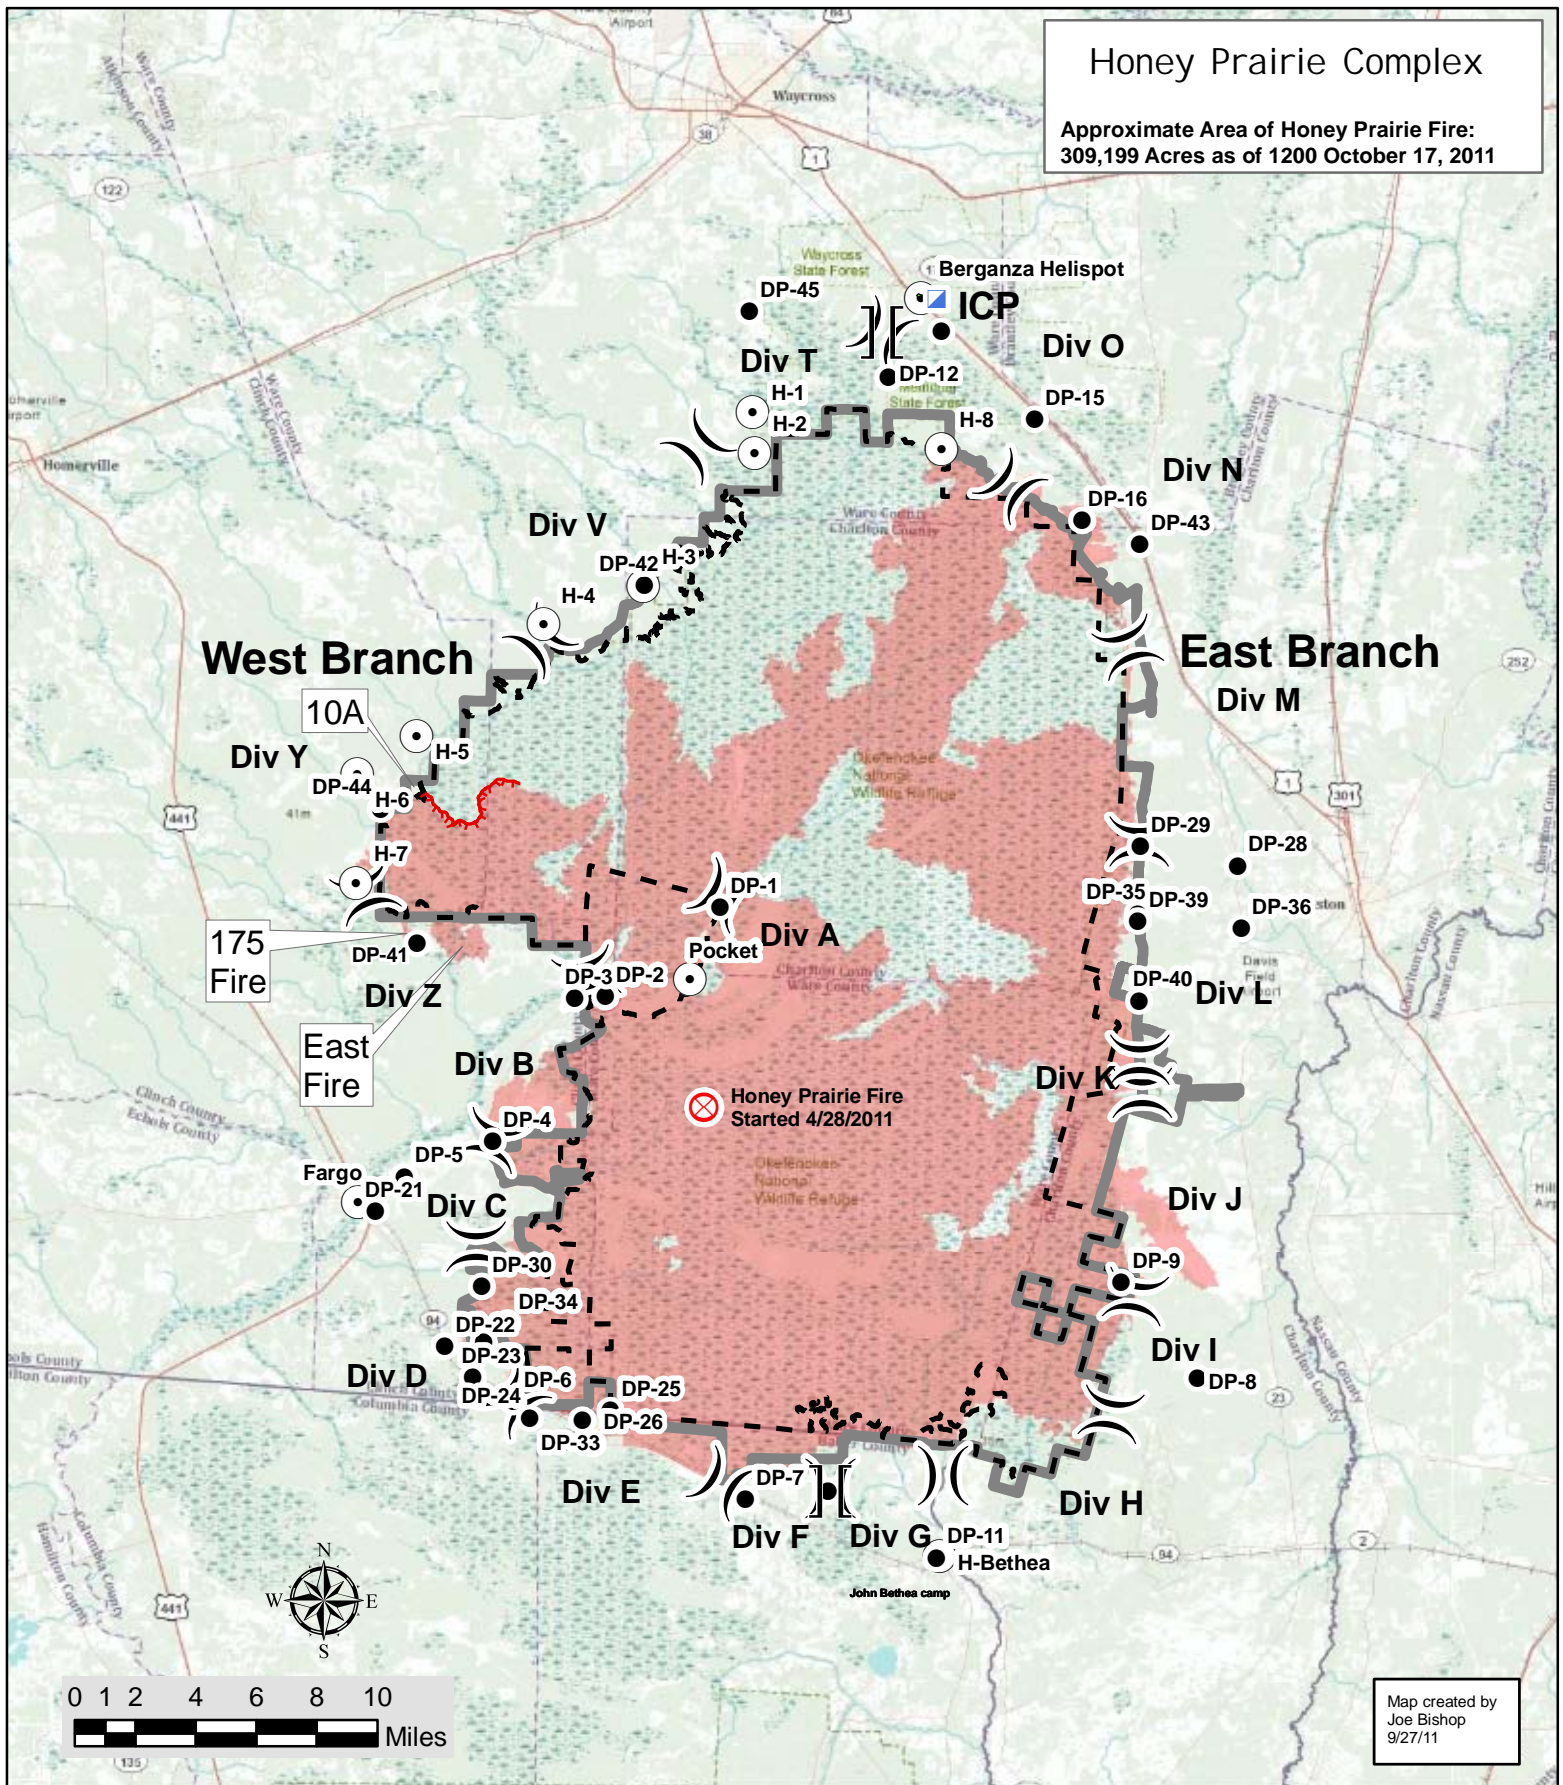

GA DNR Gary Simmons 912-282-2406 Cell

4. If necessary, call the Georgia DNR at 1-800-241-4113 with a description of the person, vehicle and Tag number, and the nature of the confrontation. Georgia DNR will send an officer to handle the situation.

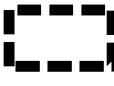

# Honey Prairie Complex

Approximate Area of Honey Prairie Fire:  
309,199 Acres as of 1200 October 17, 2011

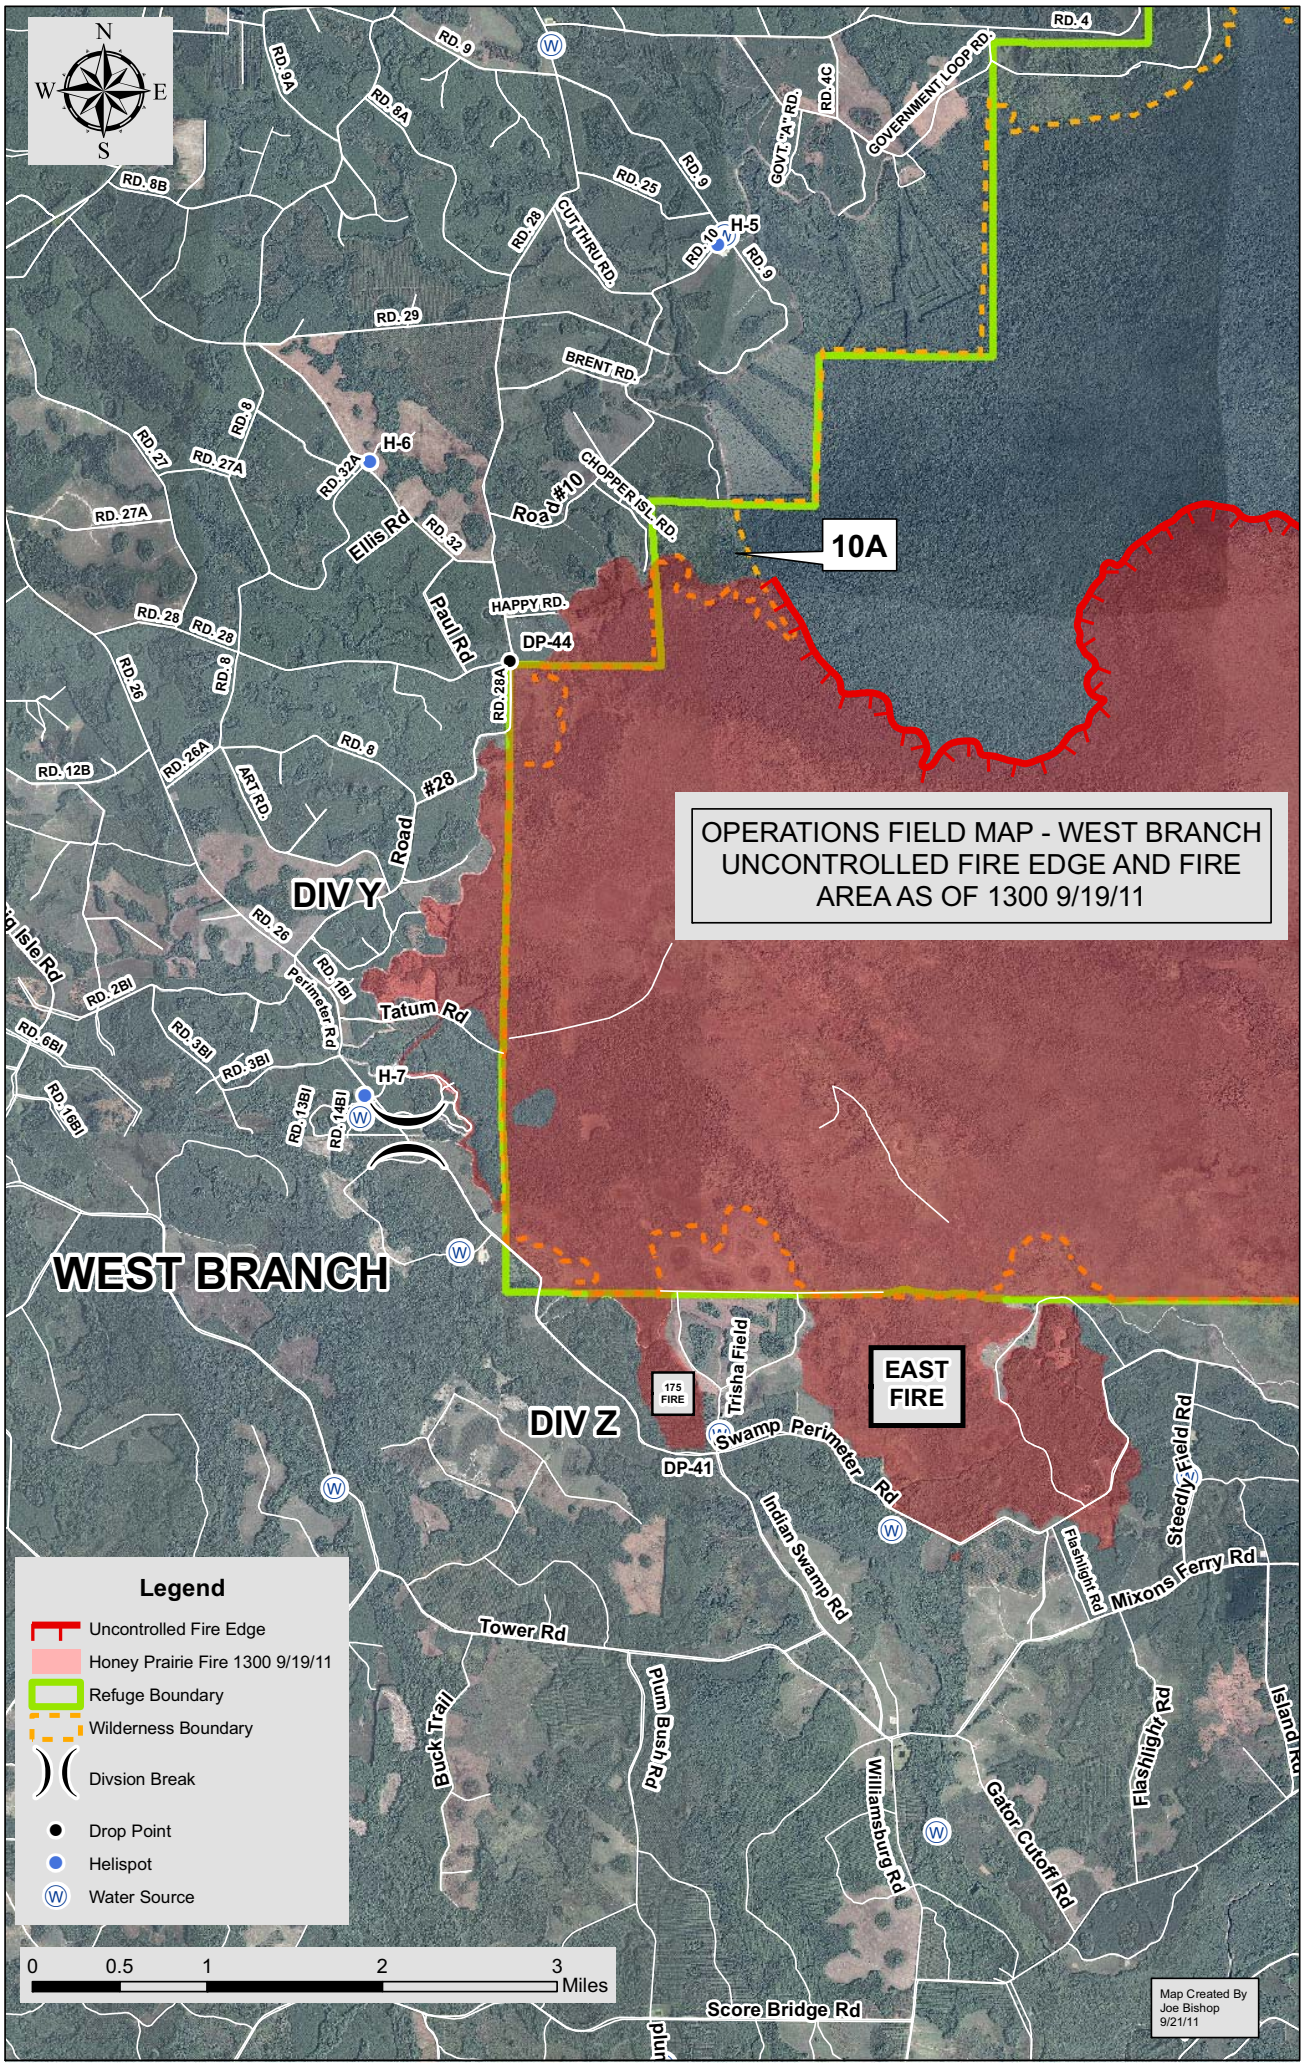

Map created by
