FIRE BEHAVIOR FORECAST

Fire: Honey Prairie Complex	Unit: GA-OKR-000001	Prediction for Day Shift
Forecast #78 Issued: 07/24/2011 1830 hrs	Signed: /S/John Kern	Shift Date: Monday 07/25/11

GENERAL FIRE BEHAVIOR

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

Indicators/Threshold for Increased Fire Activity

- **Relative humidity dropping below 45%**
- **Winds above 10 mph**
- **Heavy fuel loadings**
- **Fine dead fuel moisture 8% or less**
- **Dispersion above 70**
- *** Items in BOLD are predicted to occur today***

SPECIFIC FIRE BEHAVIOR

- **Fire behavior should be slow to develop today after the past few day's rains.**
- **Interior smoldering and some flare ups are possible, especially if winds increase.**
- **Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths. LAL 2**

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 3 - 10 G 16 mph				
Shrub Fuels – SH4	1 - 5 ch/hr	1 - 2 feet	1/10 – 2/10 mile	50%
Heavy Southern Rough- SH8	3 – 12 ch/hr	3 -7 feet	1/10 – 2/10 mile	50%
Timber Litter-Reburn TL8	1 - 4 ch/hr	1 - 3 feet	1/10 -2/10 mile	50%
Small Pine Plantation w/grasses GR5	3 – 16 ch/hr	2 - 5 feet	1/10 – 2/10 mile	50%

One hour fine dead fuel moisture is at 7% for Monday. Moisture from repeated rains have reduced the fire threat, HOWEVER some areas have dried out and burning continues. 1,000 hour fuels again drier than normal for this time of year. There is reburn potential in all divisions due to the amount of needle cast and fallen trees. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. **In areas where fuels have been herbicided, expect quick ignitions and extreme heat, quick rate-of –spread, and group tree torching producing spotting problems.**

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

West	A	<i>Fire is rather quite in this area. Watch for IA and Falling snags. 20% chance of rain</i>	East West	T/V	<i>Rains did fall in this area however fire will continue a slow spread to the North and west. Be heads-up for falling snags. 20% chance of rain</i>
	B-G	<i>Be heads-up for falling snags. 20% chance of rain</i>		H, I J, K L,M N,O	<i>Rains did fall in this area. Heads-up for falling snags. 20% chance of rain</i>
	Y Z	<i>Areas of heat will remain near Div Y/Z perimeter with possible flare-ups in moderate to high fuel loadings. Be heads-up for falling snags. 20% chance of rain</i>			

Night Ops – No Night Operations are Planned. Scattered showers and thunderstorms will continue with patchy fog developing after midnight.

Air Operations: Expect possible areas of heavy smoke especially on the east and north side of the fire.

SAFETY:

WINDS – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS -** these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **SNAGS – Snags are falling in all Divisions – will be influenced by Thunderstorm outflow winds.** **FUELS:** Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. Stay focused, and put LCES in place before starting operations. Watch for standing burning snags that can fall without warning. *Energy Release Component (ERC) is running near average for this time of year.*

HEALTH AND SAFETY MESSAGE

SAFETY starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT: Honey Prairie Fire	DATE: 7/25/11	TIME: 0800
------------------------------	---------------	------------

Major Hazards and Risks: **Snags**
 Logging Operations
 Communications
 Hydration
 Driving

Snags – Several “green” snags have fallen over the last several days due to the combination of out flow winds, down pours and logging. Continuously evaluate parking areas, drop points and other areas of operations for potential snags. Flag, communicate and avoid working or parking within falling distance.

Logging Operations – Falling and skidding operations may be across and adjacent to access routes. Log trucks and/or equipment require a lot of room and may be right around the next curve or turn! Drive defensively by reducing speed (increasing your reaction time and shorting braking distance).

Communications – We are moving ICP, what changes in Communications does this mean for you? Do you know when and where briefings will be tomorrow?

Hydration – Hydrating should start before shift and be maintained hourly. Gatorade is good for replacing electrolytes; however, it does not replace the natural minerals that water does. A 3 to 1 ratio is recommended (3 waters to 1 Gatorade) to stay properly hydrated.

Driving – Obey traffic laws at ALL times! Do Not assume the other driver may yield right of way, stay alert and scan the road ahead!

Remember, Scan the road ahead...

Communication Responsibilities

All firefighters have five communication responsibilities:

- Brief others as needed
- Debrief your actions
- Communicate hazards to others
- Acknowledge messages
- Ask if you don't know

In addition, all leaders of firefighters have the responsibility to provide complete briefings that include a clearly stated “Leaders Intent.”

- Task = What is to be done
- Purpose = Why it is to be done
- End State = How it should look when done

Incident Safety Officers: Mark Munns, Tommy Hawkins, Jamey Burnsed, Steve Holman, Rodney Weeks, and Tommy Lail

1. Establish & maintain LCES. Report LCES checks twice daily to DIVS.
2. Look UP,DOWN and AROUND - Flag and Communicate.
3. Follow downhill fireline checklist.
4. Take plenty rest breaks and encourage to drink water NOW through briefings.
5. Watch out for complacency. Supervisors need to keep constant surveillance for early signs and address.
6. Observe 30/30 Rule: Reference Incident Response Pocket Guide. Look for new starts.
7. Post experienced Lookouts. Make sure LCES is in place and make known.
8. Utilize Fire Departments for structure protection. Tailgate briefings on urban interface hazards.
9. Defensive driving will be addressed in all briefings.
10. Utilize public "Community Meetings" to warn public of fire hazards/traffic.
11. All personnel must meet the 2:1 work/rest ratio. Safety Team will monitor closely.
12. Maintain LCES at all times.
13. Use Air Attack as Lookout.
14. Post lookout for Snags, Rolling Material, and Spot Fires below line.
15. Ensure Fireline is Anchored.
16. All Firefighters know current weather, predicted weather & fire behavior forecast.
17. Line Supervisors will provide clear, concise briefings.
18. Flag hazard trees & snags, post lookouts when working in vicinity of snags.
19. FBA/Meteorologist to develop weather watch system.
20. Keep Firefighters informed of any changes in predicted weather.
21. Recognize & Avoid Hazmat situations.
22. Utilize Hazmat Response Teams.
23. Use Spike Camps to limit travel times.
24. Ensure Traffic Planning is safe and enforced.
25. Use Helicopter transport when driving conditions warrant.
26. Review Structural "Watch Out" situations.
27. Abandon Structures before Safety is compromised.
28. Air Attack and/or lead plane will always be in the air to coordinate aircraft.
29. Pilots will be briefed on strategy and tactics.
30. Personnel on ground will stay out of drop zones.
31. Observe all traffic signals and speed limits.
32. Use spotter when backing vehicle(s).
33. Refer to Fireline Handbook on Power Line Hazards.
34. Burn aerial fuels & avoid as a safety zone.
35. Construct direct line with immediate burn out of fuels.
