F	IRE BEHAVIOR FORECAST	
Fire: Honey Prairie Complex	Unit: GA-OKR-000001	Prediction for Day Shift
Forecast #82 Issued: 07/28/2011 1830 hrs	Signed: Keith Mousel	Shift Date: Friday 07/2911

### **GENERAL FIRE BEHAVIOR**

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp.

### Indicators/Threshold for Increased Fire Activity

Relative humidity dropping below 45%

· Fine dead fuel moisture 8% or less

Winds above 10 mph 

Dispersion above 70

Heavy fuel loadings
 \* Items in BOLD are predicted to occur today\*

### **SPECIFIC FIRE BEHAVIOR**

- · Fire behavior should be slow to develop today yesterdays rain.
- · Interior smoldering and some flare ups are possible, especially if winds increase.
- Expect fire to continue spreading through the shrub fuels with low rates of spread and minimal flame lengths. LAL 0

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 3 - 10 G 16 mph				
Shrub Fuels – SH4	1 - 4 ch/hr	1 - 2 feet	1/10 – 2/10 mile	45%
Heavy Southern Rough- SH8	1 – 9 ch/hr	3 -6 feet	1/10 – 2/10 mile	45%
Timber Litter-Reburn TL8	1 - 3 ch/hr	1 - 3 feet	1/10 -2/10 mile	45%
Small Pine Plantation w/grasses GR5	1 – 8 ch/hr	1 - 3 feet	1/10 – 2/10 mile	45%

One hour fine dead fuel moisture is at 8% for Friday. Moisture from rain has reduced the fire threat, HOWEVER some areas remain dry and burning continues. 1,000 hour fuels are drier than normal for this time of year. There is reburn potential in all divisions due to the amount of needle cast and fallen trees and scorched shrubs. Should wind become stronger than predicted, expect fire behavior to increase above predicted levels. In areas where fuels have been herbicided, expect quick ignitions and extreme heat, quick rate-of –spread, and group tree torching producing spotting problems.

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

### **All Divisions:**

The fire continues a slow spread through the thick bays and muck soils. Roots and fallen trees are protecting heat sources allowing the fire to burn organic soils from the bottom up. Be heads-up for falling trees. 10% chance of rain.

Night Ops - No Night Operations are Planned. Scattered showers and thunderstorms will continue.

<u>Air Operations</u>: Expect possible areas of heavy smoke especially on the east and north side of the fire.

### SAFETY:

<u>WINDS</u> — Stay abreast of changing wx conditions throughout the entire shift. <u>THUNDERSTORMS</u>—these severe winds can create extreme fire behavior, with winds gusting over 30 mph. <u>Live Trees/SNAGS</u> — are falling in all <u>Divisions</u> — will be influenced by Thunderstorm outflow winds. FUELS: Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor reburn is still possibile. 1,000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. Stay focused, and put LCES in place before starting operations. *Energy Release Component (ERC) is running near average for this time of year.*

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. **Mode** refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.
