GENERAL FIRE BEHAVIOR

Fuels around the Okefenokee Wildlife Refuge are predominately Fuel Model 7 (Southern Rough). Large to moderate acreage tracts of commercial timberland are mixed in throughout the entire perimeter surrounding the refuge. Fast moving wildfires with extremely high flame lengths and rapid rates of spread occur within the swamp. As fire transitions to the upland, torching and crown fires are common. Long Range spotting is possible.

Indicators/Threshold for Increased Fire Activity

- Relative humidity dropping below 45%
- Winds above 10 mph
- **Heavy fuel loadings**
- **Fine dead fuel moisture 8% or less**
- Dispersion above 70
- *** Items in BOLD are predicted to occur today***

SPECIFIC FIRE BEHAVIOR

- **Fire behavior will be influenced by past precipitation. Central and South portions of fire area remain moist. North half is in a drying trend.**
- **Expect fire to continue spreading through the shrub fuels with low to moderate rates of spread, low to very active flame lengths, and creep through the hardwood stands. Expect areas with high heat concentrations to increase fire intensity with less than 60% RH, leading to column development early afternoon. (Wind gusts will temporarily increase fire intensities). LAL 3**

Fuel Type	Rates of Spread	Flame Length	Spotting Distance	Firebrand Ignition
Winds at 4 - 7 G 14 mph				
Shrub Fuels	1 - 13 ch/hr	2 - 15 feet	1/10 - 2/10 mile	46%
Southern Rough	1 - 17 ch/hr	2 - 7 feet	1/10 - 2/10 mile	46%
Timber Litter-Reburn	1 - 2 ch/hr	1 - 2 feet	1/10 - 2/10 mile	46%
Small Pine Plantation w/grasses	1 - 16 ch/hr	2 - 7 feet	1/10 mile	44%

One hour fine dead fuel moisture is at 8% for Thursday. 1000 hour fuels are drier than normal for this time of year. There is reburn potential in all divisions due to the amount of needle cast. Should a fire run(s) occur, expect winds in the area to potentially increase above predicted levels. This would increase Flame Lengths and ROS above predictions. Heavier firebrands can also be lifted higher and further increasing likelihood of spots to max predictions. **In areas where fuels have been herbicided, expect quick ignitions and extreme heat, quick rate-of –spread, and group tree torching producing spotting problems.**

NOTE- FIRE BEHAVIOR CALCULATIONS ARE FOR FIRES IN UNBURNED FUELS INCLUDING NEW IA STARTS.

West	A	Wetting rains have moistened fuels. Falling snags still pose a threat to fire personnel and the boardwalk. 40% chance of rain	West	T/V	Fire will continue a slow spread to the North. Fuels have begun a trying trend. Expect active fire with column development in areas having intense heat. Be heads-up for falling snags. 40% chance of rain
	B-G	Wetting rains have moistened fuels. Be heads-up for falling Snags. 40% chance of rain			
	Y Z	Fuels are in a drying trend. Areas of heat will remain near Div Y/Z perimeter with possible flare-ups in moderate to high fuel loadings. Be heads-up for falling snags. 40% chance of rain	East	H, I J, K L, M N, O	Fuels drying North half of branch. Areas of interior fire in Divs N and O will continue to have very active fire with column development early PM. Heads-up for falling snags. 40% chance of rain

Night Ops – Expect another night of minimal fire behavior, with areas of heavy smoke and patch of fog after 2200 hrs. with fog becoming locally dense. Partly cloudy with a slight chance of showers and thunderstorms mainly before 2300 hrs. Fire behavior after midnight will primarily be limited to smoldering in heavy fuels near firelines and interior in Divisions B,V,Y,V, and O. Winds are forecast from the SW 2 - 4 mph. Dispersion Index 2 –poor for nighttime. LAL 2.

Air Operations: Expect areas of heavy smoke all day especially in the Northeast area of the fire.

SAFETY:

WINDS – Stay abreast of changing wx conditions throughout the entire shift. **THUNDERSTORMS** - these severe winds can create extreme fire behavior, with winds gusting over 30 mph. **SNAGS** – **Snags are falling in all Divisions** – will be influenced by Thunderstorm outflow winds.**FUELS:** Reburn is an issue. Watch for pockets of cured shrubs or blankets of red needles beginning to cover the forest floor. 1000 and 10,000 hour fuels as well as deep duff pockets are providing the heat source. Stay focused, and put LCES in place before starting operations. Watch for standing burning snags that can fall without warning. *Energy Release Component (ERC) continues to hover near the 90th percentile.*

Mitigations

Please drive the posted speed limit or less. Remember you are ambassadors for the fire and for the refuge. Be a professional. Arrive alive drive the posted speed limit and wear your seat belt.

To prevent the spreading of germs wash your hands often. It is especially important before you eat.

It is going to be over 100 degrees again today. Stay hydrated take frequent breaks.

Be prepared for active fire behavior in the afternoon.

Thunderstorms have the ability produce strong winds heavy rain and frequent lightning. Take refuge to your vehicles and insure you are parked in a safe place. Any tree is capable of falling under strong wind events.

Seeing and doing the same things every day leads to complacency. Stay alert to all the known hazards. Conduct tail gate safety sessions.

Logging operations are on the increase. Pay attention to log trucks and logging equipment working in your environment and give them room. Avoid logging operations if at all possible.

Do not feed or harass alligators.

Safety Officers,

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "W" indicating mixed mode. All channels are shown as if programmed in a control station, base stations, mobile or portable radio.

Joint Information Center Fire Update

Fire Update for Wednesday, July 13, 2011 ~ 10 a.m.

Fire Information: www.inciweb.org

Honey Prairie Fire Complex: 297,952 acres, 70% contained
Sweat Farm Again Fire: 19,169 acres, 82% contained
Racepond Fire: 20,934 acres, 82% contained

The Honey Prairie Fire increased by 2,537 acres on July 12 including a 678 acre strategic firing operation near Swamp Park. A helicopter was used for ignition as the target was an interior pocket of unburned area in the Okefenokee NWR. There was some ash fall from the smoke column reported by Hoboken residents. More smoke and ash can be expected on July 13 as another hot, dry day is expected. Crews continue patrolling, building breaks on the perimeter, and continuing mop up operations. The fire was fairly active in the interior, increasing as the fuels were dried during the day.

Firefighters on the Sweat Farm Again and Racepond Fires continue to patrol and mop up the perimeter of these fires and extinguish machine pile holding fire that could threaten the fire line. They are applying best management practices where needed and providing initial attack support to the Georgia Forestry Commission. Structure protection and fuel reduction continues in Swamp Park.

A Hazardous Weather Outlook has been issued by the National Weather Service: "Areas of smoke will continue to impact portions of southeast Georgia. Smoke from the Honey Prairie wildfire will push to the east and northeast of the fire location impacting a portion of southeast Georgia, including Nahunta, Brunswick, Woodbine and St. Marys. The smoke may drift into northeast Florida including locations around Jacksonville International Airport, Callahan, Hilliard and Kings Ferry through the mid afternoon hours then lift northward. Visibilities may be reduced to 3 miles or less at times across these areas."

Okefenokee National Wildlife Refuge remains closed. During the early morning hours of low fire activity, firefighters staged at the Visitor Center are clearing downed trees and cutting down hazardous trees along the Ridley's Island Trail.
