*An Equal Opportunity
Employer & Service Provider*

Letter from GFC Incident Commander:

To: All Honey Prairie Incident Personnel

As a Type 3 Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated.

Guidelines on in-appropriate behavior both “on Duty” and “off Duty” while assigned are addressed within each agencies policies. Our Team expects all incident personnel to follow established government policies for behavior along with all Illegal drug and alcohol directives.

Our Incident Management Team endorses and supports an attitude of mutual respect for all personnel and the public we serve.

We expect a strong work ethic and an attitude of Safety at all times!

Sincerely,

/s/ Buck Kline

Incident Commander
Type 3 Incident Management Team

INCIDENT OBJECTIVES	1. INCIDENT NAME Honey Prairie Complex	2. DATE PREPARED 11/05/11	3. TIME PREPARED 1700												
4. OPERATIONAL PERIOD (DATE/TIME) Sunday November 06, 2011 0700 – 1900															
5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES) <ol style="list-style-type: none"> 1. Provide for safety of incident personnel and public in all incident operations. 2. Maintain a positive working relationship with all adjacent landowners, cooperators, State and Federal partners. Inform, involve and communicate incident planning and operations with all partners. 3. Contain all fires that are within the Okefenokee National Wildlife Refuge, inside the Refuge and/or inside the swamp edge break if possible. 4. In cooperation with local land owners and communities, use full suppression strategies and tactics to minimize damage to private timberlands and structural improvements and to prevent fires outside the Refuge from entering the Refuge. 5. Assist in management and suppression of additional fires (new starts or breakouts) in the vicinity as approved by Agency Administrators and Incident Commander. 6. Protect all cultural and archeological sites and structures within the refuge. 7. Manage the fires cost-effectively consistent with the values at risk. 8. Coordinate suppression actions with assigned Refuge Resource Advisors 															
6. WEATHER FORECAST FOR OPERATIONAL PERIOD See attached forecast for area specific weather information.															
7. GENERAL SAFETY MESSAGE Drive defensively and use spotter when backing. Ensure LCES is in place and known by all personnel. Drink plenty of water and take frequent rest breaks. Ensure proper use of PPE during all operations.

HEALTH AND SAFETY MESSAGE

SAFETY starts with *YOU*

We are ALL accountable for SAFE behaviors

INCIDENT: Honey Prairie Complex

DATE: 11/6//11

TIME: 0800

Major Hazards and Risks: **Driving**
 Complacency
 Wildlife
 Hunters

DRIVING – **Avoid parking in a blind curves.** Hunters are traveling these dirt roads at extreme rates of speed chasing their dogs. You do not want to be parked where they can't see you when they come by.

Complacency – As we have transitioned into a holding and mop up mode, don't get complacent that active fire behavior is over. History has shown us that a fire in this swamp can once again become active when you least expect it. Remember to look up, down, and around as you patrol. The continued high winds and lower humidity's could contribute to new IA and we need to ensure were mentally as well as physically ready!

Wildlife – Many wildlife encounters have occurred throughout the incident. Snakes have been the biggest issue. **Watch where you are stepping!** **Feeding or harassing wildlife is inappropriate and just plain dumb!** The last thing we want is for wildlife to relate humans to food. By feeding the wildlife you encourage them to charge at humans which could lead to them having to be moved or put down.

Hunters – Today may be another busy day for hunters being in the woods. Be respectful of these folks by not patrolling outside of the area we are currently working. If you interact with any hunters be respectful and professional. Most of them will return the respect. If you do have a problem with a hunter notify the DIVS and the Security Officer.

DO NOT FEED WILDLIFE!

Safety Officer: Seth Pierce

INTEGRITY

Know yourself and seek improvement

- Know the strengths/weaknesses in your character and skill level.
- Ask questions of peers and superiors.
- Actively listen to feedback from subordinates.

Seek responsibility and accept responsibility for your actions

- Accept full responsibility for poor team performance.
- Credit subordinates for good performance.
- Keep your superiors informed of your actions.

Set the example

- Share the hazards and hardships with your subordinates.
- Don't show discouragement when facing setbacks.
- Choose the difficult right over the easy wrong.

WEATHER FORECAST

FIRE BEHAVIOR FORECAST

Fire name: Honey Prairie	Forecast # 1 Long Term	Prediction for: Oct, Nov, Dec 2011
Forecast Issued: October 2011	Signed: Troy Floyd FBAN	Shift Date; ALL

Weather Summary: This fire behavior forecast is designed to be used with the daily fire weather forecast produced by the National Weather Service or field observations you take near the fire line.

General Fire Behavior: The Seasonal fire situation within and around the Okefenokee swamp has been driven by historic drought. Muck fuels within much of the swamp interior will continue to burn until substantial rainfall has occurred. Prolonged dry periods, periods with low RHs and High Winds will be the most probable situations for increased fire behavior. Major concerns are flare-ups that are near the containment lines threatening to spot or slop over onto the uplands. Pine Fuels and Southern Rough along the uplands are conducive to rapid rates of spread, torching, crowning and spotting.

Instructions for use- Start with second page to obtain your 1 hour Fuel moisture. Then use Charts below for outputs.

Fuel Model (7) Southern Rough (Table Below)

Shrub Fuels (sh8) Palmetto and Galberry (Table Below)

Flame Lengths FM (7) Table Below

Flame Lengths (sh8) Table Below

To calculate Rates of Spread and Flame Lengths

Use the graphs above starting on the bottom with your 1 hr Fuel moisture, Trace upwards to the wind line then turn left to get your Rates of spread and Flame Lengths.*Use next page to calculate your 1 hour fuel Moisture.**

Reference Fuel Moisture
Day Time
0800 - 1959

1	Relative Humidity (%)

Dead Fuel Moisture Content Corrections
Nov. Dec. Jan.

2E		EXPOSED					
		Exposed - Less than 50% shading of surface fuels					
ASPCT	Slope	0800 to	1000 to	1200 to	1400 to	1600 to	1800 to
		L	L	L	L	L	L
S	0 - 30%	5	4	3	2	4	5
2S		SHADED					
		Shaded - Greater than or equal to 50% shading of surface fuels					
S	All	5	5	5	5	5	5

Instructions to calculate 1 hour FDFM

Step (1) Use top table to get reference fuel moisture: Use predicted or taken weather OBS of temperature (Dry Bulb) and Relative Humidity. Follow the chart from left (Dry Bulb) and (RH) top of chart. In the numbers field where both meet you will get your Reference Fuel Moisture.

(2) Use the above table (2E) for exposed fuels or (2S) for shaded fuels or cloudy days. At the top of the table select time of day then to the left of the Table select 0-30% slope and locate your Fuel Moisture content correction number.

(3) Add your reference Fuel Moisture to the Dead Fuel moisture content correction. This will give you your 1hr FDFM.

8. Medical Emergency Procedures

Identify any EMTs and Paramedics in your crews. All medical emergencies will be reported to the Division Supervisor who will assume command and notify Line Medics.

On scene personnel will:

1. Provide medical care & stabilize patient.
2. Call 911 if possible or call phone #'s above for EMS and provide the information requested.
3. Notify Communications via radio over Command Channel
4. Communications will clear radio traffic for medical emergency.
5. Communications will confirm 911 has been notified coordinate with IC, SOF.
6. DIVS will notify the Field Ops Section Chief.

MAJOR EMERGENCIES – Secure the area and identify witness for later investigation. Keep an accurate log of events. NOTE: Do not give Patients Name over the radio!

Hunter Encounters and Confrontations

Hunting season is now open. Crews are likely to encounter hunters either hunting or scouting in the area of the Swamp Edge Break. Hunting is often done with the aid of dogs and the hunters will be chasing the pack in vehicles on narrow dusty roads to intercept game. Use Caution traveling as hunters may not be paying attention and traveling at excessive speeds.

Avoid contact as much as possible. The least amount of impact we have on their hunting area the better off we will be. Expect many questions about the fire operations and how long the fire will continue to burn. It's a good idea to review the Fire Information section of the plan for a good explanation of what to expect in the coming months. The majority of the hunters will be friendly but should you have a confrontation with someone:

1. Politely excuse yourself and leave the area immediately;
2. Notify your supervisor;
3. Notify the Security Manager by radio or phone:

SECM – Ryan Petersen 301-471-5173

Or

GA DNR Gary Simmons 912-282-2406 Cell

4. If necessary, call the Georgia DNR at 1-800-241-4113 with a description of the person, vehicle and Tag number, and the nature of the confrontation. Georgia DNR will send an officer to handle the situation.

Fire Information IAP messages

1. Public and firefighter safety remains the top priority for this incident.
2. Fire managers for the refuge have coordinated suppression efforts with the Georgia Forestry Commission and the Greater Okefenokee Association of Landowners (GOAL) representing federal and state agencies, industry and private landowners. Through this Unified Command, the partners support the chosen strategy as the appropriate management response to protect adjacent valuable commercial timber, isolated homes scattered on private land, and critical wildlife habitat for threatened and endangered species.
3. Fire is a natural component of the Okefenokee ecosystem; since the refuges creation in 1937, there have been hundreds of wildfires that have burned thousands of acres here. The plants and animals on the refuge are well adapted to survive periodic wildfires.
4. Past experience has shown that conventional fire suppression tactics do not work well inside the swamp. Humans have never been successful in controlling fires within the swamp; only “mother nature” has done this. Attempting suppression within the swamp is ineffective, costly, wastes firefighting resources and needlessly endangers firefighter safety.
5. Fire on the refuge is usually fought by reinforcing firelines along the Swamps Edge Break, including areas of private land, to keep the fire contained within the swamp.
6. Okefenokee National Wildlife Refuge typically employs a contain and control strategy to manage fire; containing it within the swamp and actively suppressing it outside of the swamp in the upland forest.

Commonly asked question:

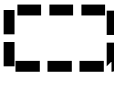

1. Why won't this fire go out? What will it take? Surface burning of available fuels is only part of the current problem. Peat beds (partially decayed vegetation normally floating in a vertical column of water) is what supports these surface fuels. Unfortunately, the current dry conditions have allowed a portion of the peat beds to dry out and the surface burn has transferred into the peat beds and is now burning subsurface. There are now two sources of heat and available fuel that must be extinguished. The current spotty, localized rain storms can have some effect on the surface burns but do not do much to control subsurface burns. It will take a big rain storm blanketing the entire swamp (remember the swamp is huge –over 650 square miles in size) dropping a minimum of 6-8 inches of rain. As the water levels in the swamp slowly rise, as a result of the rain, the peat beds will become water saturated again eliminating one source of the fire. As the surface of the swamp becomes covered by water, burning surface fuels will be extinguished as well. Burning fuels that extend above these water levels (dead and drying trees/shrubs) may continue to burn until they fall over or burn up. Fire that exists in upland habitat on islands within the swamp may also continue to burn but it will be confined to that immediate area by the swamp waters surrounding the island. This is not something that will likely occur overnight. It may take days, weeks, or even months. The refuge has experienced fire events that were not declared officially out for well over a year after the main firefighting effort had ceased.
