Potential futu No likely thro		Outbuilding/Other				196			1				
26: Projected incident movement/spread 12, 24, 48, and 72 hour time frames:													

12 hours: little to no movement due to rainfall over the fire

24 hours: **same as above**

48 hours: fire will begin to creep and smolder as conditions become drier

72 hours: same as above

27: Values at Risk: include communities, critical infrastructure, natural and cultural resources in 12, 24, 48 and 72 hour time frames:

12 hours: High value commercial timberlands, the Okefenokee National Wildlife Refuge (OKR) and cultural resources, CSX railroads, the Suwannee Chapel Community.

24 hours: **same as above** 48 hours: **same as above** 72 hours: **same as above**

28: Critical Resource Needs (amount, type, kind and number of operational periods () in priority order in 12, 24, 48, and 72 hour time frames):

12 hours: **none**24 hours: **none**48 hours: **none**72 hours: **none**

29: Major problems and concerns (control problems, social/political/economic concerns or impacts, etc.) Relate critical resources needs identified above to the Incident Action Plan.

Moderate to heavy fuel loads in the swamp and uplands; limited accessibility for ground equipment; mulitiple jurisdictions involved; wilderness area; and reburn potential over the entire fire area. Needle cast and re-sprouted palmetto reburn are concerns. Timber logging activity within the burned area. Bear season, archery season and muzzleloader hunting is open increasing hunter activity in the area. Extended drought makes breakouts possible in the western portion of the fire.

ICS-209 Form Page 2 of 3

30: Observed Weather for Current

Operational Period

Peak Gusts (mph): 2 Max.

Temperature: 75

Wind Direction: **E** Min.

Relative Humidity: 90

31: Fuels/Materials Involved: 7 Southern Rough

Heavy swamp fuel loads, heavy to moderate palmetto/gallberry,

3+ year rough

32: Today's observed fire behavior (leave blank for non-fire events):

Fire behavior has been minimal due to rainfall over the fire. Behavior is predicted to increase as conditions become drier.

33: Significant events today (closures, evacuations, significant progress made, etc.):

0.25"-0.5" rainfall occurred over the fire today.

34: Forecasted Weather for next Operational

Period

Wind Speed (mph): 28 Temperature: 73

Wind Direction: W

Relative Humidity: **50**

35: Estimated Control

Date and Time:

36: Projected Final Size:

37: Estimated Final Cost:

38: Actions planned for next operational period:

Crews will continue to patrol and monitor the fire. Mop up of containment lines will continue where accessible.

39: For fire incidents, describe resistance to control in terms of:

- 1. Growth Potential **Medium**
- Difficulty of Terrain High

40: Given the current constraints, when will the chosen management strategy succeed?

41: Projected demobilization start date:

42: Remarks:

Agency Administrator's objectives remain to contain all fires within the Okefenokee NWR, using indirect tactics at the swamp's edge because of inaccessible terrain, and to maintain wilderness values and reduce negative impacts to the ecosystem. As drying out continues, increase in fire behavior is likely.

continues, me	cuse in the behavior is likely.			
Incident Name	Suppression Strategy	Size	MMA	Cost To Date
Honey Prairie	Point or Zone Protection/Limited Perimeter Control	309,275	76%	\$52,996,219

44: Cooperating and Assisting Agencies Not Listed Above:

GEMA, GDOT, FLDOT, County EMA's, GOAL, FFS, GFC, Rayonier, Superior Pine and Langdale. Rayonier, Superior Pine and Langdale resources are not reflected in the Honey Prairie Complex resource numbers, since they will respond to protect their own lands as needed.
