26: Projected incident movement/spread 12, 24, 48, and 72 hour time frames: 12 hours: Minimal spread overnight to the NW. 24 hours: Continued spread to the North and Northwest due to high temperatures and lower RH. 48 hours: Continued spread to the North and Northwest due to high temperatures and lower RH. 72 hours: Continued spread to the North and Northwest due to high temperatures and lower RH.

29: Major problems and concerns (control problems, social/political/economic concerns or impacts, etc.) Relate						

critical resources needs identified above to the Incident Action Plan.

Moderate to heavy fuel loads in the swamp and uplands; limited accessibility for ground equipment; lack of water resources for sustained attack; multiple jurisdictions involved; wilderness area; and reburn potential over the entire fire area. Needle cast (up to 6" in depth) and re-sprouted palmetto reburn concerns.

30: Observed Weather for Current Operational Period
Peak Gusts (mph): **6g12** Max.
Temperature: **96**
Wind Direction: **ESE** Min.
Relative Humidity: **33**

31: Fuels/Materials Involved: **7 Southern Rough Heavy swamp fuel loads, heavy to moderate palmetto/gallberry, 3+ year rough**

32: Today's observed fire behavior (leave blank for non-fire events):

Active areas of surface fire spread along the NW and northern flanks of the fire.

33: Significant events today (closures, evacuations, significant progress made, etc.):

34: Forecasted Weather for next Operational Period

Wind Speed (mph): **8g13** Temperature: **96**
Wind Direction: **ESE** Relative Humidity: **35**

35: Estimated Control Date and Time:

36: Projected Final Size:

37: Estimated Final Cost:

38: Actions planned for next operational period:

Prepare for potential burn-out operations in the NW. Patrol and control reburn; mop up; improve line; flag access and escape routes; and recon rehab opportunities.

39: For fire incidents, describe resistance to control in terms of:

1. Growth Potential - **High**

2. Difficulty of Terrain - **High**

40: Given the current constraints, when will the chosen management strategy succeed?

41: Projected demobilization start date:

42: Remarks:

Critical resources identified are needed to conduct potential burn-out and control actions along the NW perimeter; 30 miles of preparation required and 6 days of potential burning operations. Agency Administrator objectives are to contain all fires within the Okenfenokee NWR, using indirect tactics at the swamp edge because of inaccessible terrain and to maintain wilderness values and reduce negative impacts to the ecosystems.
