29: Major problems and concerns (control problems, social/political/economic concerns or impacts, etc.) Relate critical resources needs identified above to the Incident Action Plan. <b>Problems for control include but are not limited to the following: 1. Drought stressed fuels, fire cured fuels and reburns based on needle cast inside the fire perimeter. 2. Limited access to areas based on terrain and soil conditions. 3. Erratic winds and possible lightning starts caused by afternoon thunderstorms.</b>

---	--

32: Today's observed fire behavior (leave blank for non-fire events):  
**Fire behavior consisted of reburns, creeping spread and low flame lengths. Rain and high RH prevented any significant fire behavior.**

33: Significant events today (closures, evacuations, significant progress made, etc.):  
**Between one to two and a half inches of rain fell on the Sweat Farm fire today. As of today down sizing of the incident has begun.**

34: Forecasted Weather for next Operational Period Wind Speed (mph): <b>11</b> Temperature: <b>88</b> Wind Direction: <b>E</b> Relative Humidity: <b>63</b>	35: Estimated Control Date and Time:	36: Projected Final Size: <b>19,169</b>	37: Estimated Final Cost:
---	--------------------------------------	--	---------------------------

38: Actions planned for next operational period:  
**Continue to mopup and monitor control lines and assist local district on Intial Attack as needed.**

39: For fire incidents, describe resistance to control in terms of:

1. Growth Potential - **Medium**
2. Difficulty of Terrain - **High**

40: Given the current constraints, when will the chosen management strategy succeed?  
**Sustained rain will be needed to obtain control of the fire.**

41: Projected demobilization start date: **07/20/2011 0000**

42: Remarks:  
**Resources committed to the Sweatfarm Fire but not included in the Committed Resources field: 1. Three Motor Graders - State Resource 2. One Excavator - State Resource 3. One Mechanic - State Resource**
