<b>Comments /notes on tonight's mission and this interpretation:</b> Neglegable fire growth was detected in tonight's imagery. The only modification to the heat perimeter is associated with an isolated heat source on the perimeter east of Chicken Coop Gap at 84 38 20.48 W 34 55 37.78 N. This isolated heat remains east of the Conasauga River. Scattered heat was mapped along the fire's western edge in the oxbow of the Conasauga River on the south side of Hickory Creek. Six small pockets of intense heat were mapped in the interior of the heat perimeter in the northwestern portion of the fire area north of Jigger Creek and East of East Cowpen Road.
