WEST MIMS	Date/Time From: 06/05/2017 0730 MON	Date/Time To: 06/05/2017 1930 MON
3. Objective(s):		
<ul style="list-style-type: none"> • Provide for the safety and security of incident personnel and public in all incident operations through sound risk assessment and hazard mitigations. • Confine all new fires (new starts or breakouts) within the Okefenokee National Wildlife Refuge and/or inside the swamp edge break. Fight fire aggressively and suppress all fire outside the swamp edge boundary, preventing fires from outside the break from entering the refuge while minimizing damage to private timberlands and improvements. • Maintain a positive working relationship with all adjacent landowners, cooperators and State and Federal partners. Inform, involve and communicate incident planning and operations with all including the Refuge Resource Advisors. • Protect all cultural and archeological sites and structures within the refuge. • Manage the fires cost-effectively, consistent with the values at risk. • Implement structure protection as necessary for at-risk facilities and communities. • Conduct all operations in a harassment-free environment. • Identify and initiate suppression repair on all Divisions. 		
4. Operational Period Command Emphasis:		
Branch IV Keep fire East of the North Prong of St Mary's River; West of Nassau county Florida; and North of Baker county Florida Branch III Keep fire North of Rayonier Road 10, West of St Mary's River, and South of Stokes Road Keep fire within the Okefenokee Refuge Swamp Edge Break Boundary. Respond to initial attack fires on new starts within: *South of Suwannee Canal *Within the Okefenokee jurisdictional boundaries *Within state properties inside Perimeter Road		
General Situational Awareness:		
Utilize confine, contain, and point source protection strategies and tactics that commit operations personnel only where and when they can be successful, under conditions where important values at risk are protected with the least exposure.

To: All Incident Personnel, West Mims Fire 2017

As the Unified Command Incident Commanders, we have a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

We are particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: #49	TYPE OF FIRE: Wildland
FIRE NAME: West Mims	OPERATIONAL PERIOD: 06/05/2017 Day Operational Period
DATE ISSUED: 06/04/2017	TIME ISSUED: 1700
UNIT: Okefenokee National Wildlife Refuge	Prepared By: Mike Ward FBAN (t) Signed By: Bart Hoag FBAN

FUEL ASSUMPTIONS: Fuel types include mixed grass, brush and timber types. The high risk fuel type is grass/palmetto/gallberry brush understory, particularly in the early/mid rotation pine plantations. Current fuel dryness is above normal. Current fuel conditions are favorable for active fire behavior within all fuel types. Active crown fire in brush and pine canopy is possible when critical fire weather is present.

Expect all fuels to burn readily, including those that appear green.

KBDI: 566 (up 10 from yesterday 84th percentile), ERC-G: 31 (75th percentile).

Fuel Moistures: 1hr= 8% 10hr= 9% 100 hr= 15%

WEATHER SUMMARY: Mostly cloudy with showers and thunderstorms developing in the afternoon.

WIND (20 FT): SW 5-10 mph in afternoon.
 MAX TEMPERATURES: 88-93 MIN RH: 45-50%
 LAL: 3 CHANCE OF RAIN: 50% MAX DISPERSION: 60
 MIXING HEIGHT: 4500 TRANSPORT WINDS: SW 15-20 mph

LARGE FIRE GROWTH FIRE ENVIRONMENT CONDITIONS PRESENT DURING FIRE RUN THAT THREATENED ST GEORGE.

Fuel dryness and fire weather combined to produce significant fire growth of 18,000 acres with an initial run that was 9 miles in length. Growth initiated in swamp brush fuels east of Soldier Camp Island and burned out of the refuge into pine plantation fuels.

Fuel Moistures: 1hr FM= 5% 10 hr. FM= 7% 100 hr. FM= 14% Live Woody= 101% Herbaceous= 119%

Indicies: KBDI=720 (97th percentile) ERC G=37 (85th percentile) BI G=49 (97th percentile)

Weather Conditions: Max Temp=77 Min RH=27% Winds= 12 sustained with gusts to 20

Fire Behavior: ROS= >80 ch/hr. (1mile) Active crown fire Max spotting distance=1 mile

SPECIFIC: All Branches: Surface fuels will remain dry and available to burn. Piles and organic soil fuels continue to smolder, creep and initiate ignition of needle cast and leaf litter causing reburn. Heavy fuels will retain heat and increase potential for ignition of scorched pine needle ground cover. Thunderstorms will influence surface fire behavior, particularly in young pine plantations, increasing the potential for torching and possible short crown runs spotting up to .10 miles. Lightning from passing thunder storms will cause new fire starts in receptive fuels.

Fuel Type	Rates of Spread	Flame Length	Max Spot Distance	Probability of Ignition	Torching / Crowning Potential / Flame Lengths
Southern Rough(pine w/palmetto/gallberry)	3-4 ch/hr.	3-5 feet	500 feet	50%	Limited Torching possible in young pine regeneration.
Timber Litter (pine litter reburn)	1-2 ch/hr.	1 feet	50 feet	50%	No Torching
Grass/Shrub (Young Plantations/Swamp GS3)	8-14 ch/hr.	4-6 feet	500 feet	50%	Limited Torching possible in pine regeneration.

AIR OPERATIONS: Continued chances of afternoon and evening thunderstorms bringing lightning and gusty and erratic winds to the fire area.

FIRE BEHAVIOR SAFETY:

As ground fuels continue to burn out be cognizant of where you walk to avoid burns and other injuries. Continued burning in tree roots will increase potential hazards associated with them falling.

Reference: 1 chain = 66 feet, 20 chains = .25 mile, 40 chains = .50 mile, 60 chains = .75 mile, 80 chains = 1 Mile

Suppression Repair General Information

Suppression repair is underway in some areas of the Fire. While conducting suppression repair activities, please consider the following:

General Description: Repair of suppression constructed “fire breaks” is necessary to avoid excessive soil erosion and restore natural landscape surface water flows. While some fire breaks were created in previously undisturbed areas, most fire breaks were created by blading and/or widening existing roads or fire breaks.

Location (Suitable) Sites: All Divisions will have some level of suppression repair. Fire personnel are currently mapping repair needs. Branch and Division Supervisors will be provided with maps detailing suppression repair needs.

Ownership Type: Suppression repair may be needed on Okefenokee NWR, John M. Bethea State Forest, Osceola National Forest, and Georgia or Florida Private Lands. It is important to know where you are working as ***repair specifications may vary by landowner type.***

Coordination of Repair with READs: Suppression repair work should be done under the direction of Branch or Division Supervisors and done in coordination with Resource Advisors to assure cultural and natural resource concerns have been addressed.

Completion of Repair: When specific suppression repairs are completed a READ should be contacted for final verification and documentation in Arc Collector.

*****SEE SUPPRESSION REPAIR STANDARDS ON NEXT PAGE*****

If any type of **cultural resources or artifacts** are discovered during suppression repair activities, **stop work immediately** and contact a READ.

Suppression Repair Standards

1. **Permanent Firebreaks:** Berms and other excess soil displaced by firebreak construction should be pulled back into the disturbed area and returned to the original contour or pre-suppression grade. These lines will be identified by the appropriate landowner.

Firebreaks Constructed In Previously Undisturbed Areas: Repair of suppression constructed “dozer lines” and “berms” is necessary to avoid excessive soil erosion and restore pre-fire landscape surface water flow patterns, and to facilitate movement of wildlife where necessary. Berms, vegetation and other excess soil displaced by firebreak construction should be pulled back into the disturbed area and returned to the original contour. Logs and other debris that are near the firebreak should be placed on the repaired firebreak to deter vehicle traffic.

Intermittent Stream Crossings: Firebreaks which cross drainages will be identified and inventoried for necessary repairs. Large debris piles located in these areas will be removed or spread away from wetlands or streams. Where fire lines cross stream channels, it is important to minimize soil movement into the stream and to prevent the stream from cutting a new channel in the firebreak. Use no more than 12-inch-high berms to keep the stream in its banks and direct soil movement away from the channel at crossings and approaches.

Perennial Stream or Canal Crossings: Guidance for repair will be provided by Resource Specialists.

2. **Point Locations:**
 - a) Incident Facilities: Site specific restoration will be needed
 - b) Previously Undisturbed Areas: Pull soil and vegetation from berms back onto the disturbed area. Some areas may require disposal or scattering excess piled vegetation in adjacent areas.
3. **Roads:** Roads identified for repair will need to be graded or reshaped to be brought back to pre-suppression condition.
 - a) Clean out, repair or replace damaged road culverts. Old damaged culverts should be removed from site and disposed of properly.
 - b) Repair damage to chip sealed roads and paved roads
 - c) Repair or replace damaged closure gates and locks.
 - d) Repair or replace damaged signs damaged by fire suppression activities.
 - e) Cut and fell trees identified as hazards along public access roads or trails.
 - f) Large piles of vegetative debris on or near roads should be broken up, mulched, or chipped as appropriate.

HEALTH AND SAFETY MESSAGE

A Safety Briefing must be given to Every Firefighter, Every Day

INCIDENT: West Mims Fire

DATE: 06/05/2017 **TIME:** 0730-1930

Major Hazards and Risks:

- HAZARD TREES
- FATIGUE
- HEAT EXHAUSTION
- DRIVING HAZARDS

Repeated fires in this area have weakened the root systems of snags and some green trees throughout the fire area. With winds associated with thunderstorm, the possibility of snags and green trees falling increases. Pay particular attention while Cutting, Working, and Traveling around the fire area. The possibility of injury is high.

Manage fatigue and the cumulative effect by thinking about pace, take breaks when needed, and take care of yourself. Don't exceed the work/rest ratio for extended periods and mitigate when necessary.

Review page 103 in the IRPG for the signs indicating Heat Cramps, Heat Exhaustion, and Heat Stroke. Each person's susceptibility to heat related injuries is different. Knowing the signs will help us look out for one another as the temperatures increase. Hydration and pace are two things that can be done to minimize the chance of heat related issues.

Drive defensively; wear your safety belt and headlights on when vehicle is in motion.

5. UNINFORMED ON STRATEGY, TACTICS AND HAZARDS
