To: All Incident Personnel, West Mims Fire 2017

As the Unified Command Incident Commanders, we have a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

We are particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: #51	TYPE OF FIRE: Wildland
FIRE NAME: West Mims	OPERATIONAL PERIOD: 06/07/2017 Day Operational Period
DATE ISSUED: 06/06/2017	TIME ISSUED: 1700
UNIT: Okefenokee National Wildlife Refuge	Prepared By: Mike Ward FBAN(t) Approved By: Bart Hoag FBAN

FUEL ASSUMPTIONS: Fuel types include mixed grass, brush and timber types. The high risk fuel type is grass/palmetto/gallberry brush understory, particularly in the early/mid rotation pine plantations.

Fuels are beginning to recover moisture in most areas of the fire due to recent rains. Current fuel conditions are not favorable for active fire behavior. Active crown fire in brush and pine canopy is not expected over the next two operational periods.

KBDI: 333 (down 218 from yesterday; 28th percentile), ERC-G: 2 (7th percentile)

Fuel Moistures: 1hr= 16%, 10hr= 20%, 100 hr= 25%

WEATHER SUMMARY: Showers and thunderstorms, heavy at times.

WIND (20 FT): SW 5-10 with gust around 20 in the morning becoming NW 10-15 mph late afternoon, gusting to 20 mph in afternoon.

MAX TEMPERATURES: 84-88 MIN RH: 60-65%

LAL: 4 CHANCE OF RAIN: 100% MAX DISPERSION: 30

MIXING HEIGHT: 2000 TRANSPORT WINDS: SW becoming NW 20-25 mph

LARGE FIRE GROWTH FIRE ENVIRONMENT CONDITIONS PRESENT DURING FIRE RUN THAT THREATENED ST GEORGE ON MAY 5th, 2017.

Fuel dryness and fire weather combined to produce significant fire growth of 18,000 acres with an initial run that was 9 miles in length. Growth initiated in swamp brush fuels east of Soldier Camp Island and burned out of the refuge into pine plantation fuels.

Fuel Moistures: 1hr FM= 5% 10 hr. FM= 7% 100 hr. FM= 14% Live Woody= 101% Herbaceous= 119%

Indicies: KBDI=720 (97th percentile) ERC G=37 (85th percentile) BI G=49 (97th percentile)

Weather Conditions: Max Temp=77 Min RH=27% Winds= 12 sustained with gusts to 20

Fire Behavior: ROS= >80 ch/hr. (1mile) Active crown fire Max spotting distance=1 mile

SPECIFIC: All Branches: The current fire weather forecast is not favorable for active fire behavior, and no significant fire spread events are expected during the current operational period. Surface fuels are nearly saturated with moisture from recent rains. In highly protected areas piles and/or organic soil fuels will continue to smolder.

Fuel Type	Rates of Spread	Flame Length	Max Spot Distance	Probability of Ignition	Torching / Crowning Potential / Flame Lengths
Southern Rough(pine w/palmetto/gallberry)	>1 ch/hr.	1 foot	0 feet	2%	No Torching
Timber Litter (pine litter reburn)	>.5 ch/hr.	0.25 feet	0 feet	2%	No Torching
Grass/Shrub (Young Plantations/Swamp GS3)	>1 ch/hr.	1 foot	0 feet	2%	No Torching

AIR OPERATIONS: Continued chances of afternoon and evening thunderstorms bringing lightning and gusty and erratic winds to the fire area.

FIRE BEHAVIOR SAFETY:

Difficult walking in burned areas due to excessive soil moisture levels causing extremely slick and slippery footing.

Reference: 1 chain = 66 feet, 20 chains = .25 mile, 40 chains = .50 mile, 60 chains = .75 mile, 80 chains = 1 Mile

Suppression Repair General Information

Suppression repair is underway in some areas of the Fire. While conducting suppression repair activities, please consider the following:

General Description: Repair of suppression constructed “fire breaks” is necessary to avoid excessive soil erosion and restore natural landscape surface water flows. While some fire breaks were created in previously undisturbed areas, most fire breaks were created by blading and/or widening existing roads or fire breaks.

Location (Suitable) Sites: All Divisions will have some level of suppression repair. Fire personnel are currently mapping repair needs. Branch and Division Supervisors will be provided with maps detailing suppression repair needs.

Ownership Type: Suppression repair may be needed on Okefenokee NWR, John M. Bethea State Forest, Osceola National Forest, and Georgia Private Lands. It is important to know where you are working as ***repair specifications may vary by landowner type.***

Coordination of Repair with READs: Suppression repair work should be done under the direction of Branch or Division Supervisors and done in coordination with Resource Advisors to assure cultural and natural resource concerns have been addressed.

Completion of Repair: When specific suppression repairs are completed a READ should be contacted for final verification and documentation in Arc Collector.

If any type of **cultural resources or artifacts** are discovered during suppression repair activities, **stop work immediately** and contact a Resource Advisor or Archaeologist.

Suppression Repair Standards

1. **Permanent Firebreaks:** Berms and other excess soil displaced by firebreak construction should be pulled back into the disturbed area and returned to the original contour or pre-suppression grade. These lines will be identified by the appropriate landowner.

Firebreaks Constructed In Previously Undisturbed Areas: Repair of suppression constructed firebreaks is necessary to avoid excessive soil erosion, restore pre-fire landscape surface water flow patterns, and to facilitate movement of wildlife where necessary. Berms, vegetation and other excess soil displaced by firebreak construction should be pulled back into the disturbed area and returned to the original contour. Logs and other debris that are near the firebreak should be placed on the repaired firebreak to deter vehicle traffic.

Intermittent Stream Crossings: Firebreaks which cross drainages will be identified and inventoried for necessary repairs. Large debris piles located in these areas will be removed or spread away from wetlands or streams. Where fire lines cross stream channels, it is important to minimize soil movement into the stream and to prevent the stream from cutting a new channel in the firebreak. Use no more than 12-inch-high berms to keep the stream in its banks and direct soil movement away from the channel at crossings and approaches.

Perennial Stream or Canal Crossings: Guidance for repair will be provided by Resource Specialists.

2. **Point Locations:**
 - a) Incident Facilities: Site specific restoration will be needed
 - b) Previously Undisturbed Areas: Pull soil and vegetation from berms back onto the disturbed area. Some areas may require disposal or scattering excess piled vegetation in adjacent areas.
3. **Roads:** Roads identified for repair will need to be graded or reshaped to be brought back to pre-suppression condition.
 - a) Clean out, repair or replace damaged road culverts. Old damaged culverts should be removed from site and disposed of properly.
 - b) Repair damage to chip sealed roads and paved roads
 - c) Repair or replace damaged closure gates and locks.
 - d) Repair or replace damaged signs damaged by fire suppression activities.
 - e) Cut and fell trees identified as hazards along public access roads or trails.
 - f) Large piles of vegetative debris on or near roads should be broken up, mulched, or chipped as appropriate.
