RESOURCE ADVISOR'S MESSAGE

Addressing the IMT's Objective #3 -- Minimize impacts to natural and cultural resources -- the park's Resource Management team requests the IMT minimize disturbance to non-soilbank soils and trees in the fire area. We are less concerned about disturbance to soils and vegetation on canal/ditch soilbanks (berms, levees).

Park RM staff will monitor salinity of the water sources you are using to put out this fire daily. Our objective is to help you identify and use fresh water sources. We are available to serve you as READs, as needed. We are also available as information sources for your fire information officers and media section.

Addressing safety and risk awareness --

- Hard clay soils lie under the more organic freshwater marsh soils in the fire area. The organic soils vary in depth.
- Water depth in the ditches/canals in the fire area is pretty shallow.
- Freshwater animals including American alligators and venomous cottonmouth snakes live in this area, and we have observed alligators in the canals/ditches in the burned area. As much as possible, give these animals space. Expect that an alligator who is with baby alligators is likely to respond defensively. Most other alligators are not likely to act aggressively in this area.
- Poison ivy vines climb into the trees hereabouts as do spiny "greenbriar" vines; brambles also can be abundant. Poison ivy bears very small dry "golden" berry fruits at this time of year, and its vine stems have many short roots.
- Mosquitos are abundant! Re-apply repellent as needed. We will alert you if we become aware of mosquito-borne disease (e.g. West Nile virus) in the area.
- During breaks, keep an eye out for Bald eagles, numerous species of wading birds, coyotes, the occasional red fox or swamp rabbit, white tailed deer, frogs, crawfish/crayfish and diverse insects, all mainly in less-burned areas.
