Discussion: Winds become southeasterly today. This will start to bring some more humid air into the area, but today only enough to keep relative humidity values from crashing as low as yesterday. Expect critically low RH values in the middle 20s, with dry spots slipping towards 20 percent. A bit more improvement can be expected tomorrow, with minimum RH in the lower half of the 30s.

Forecast for Today:

Critically low RH with light moderate winds gusting into the teens

Extended Outlook:

High temperatures in the lower half of the 90s continue late this week, as will the new wind pattern of southeasterly winds. Wind speeds, however, look to increase to a 10-15 mph sustained range with gusts in the upper teens and even around 20 mph in exposed locations. Isolated seabreeze storm development can be expected to emerge late in the week, but will mostly be south of the area until Sunday when an upper disturbance may help storms push farther inland.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 26	TYPE OF FIRE: Wildland, Type 1
FIRE NAME: Tiger Island, Lions Camp Rd, Hwy 113, Elizabeth	OPERATIONAL PERIOD: Day Shift
DATE ISSUED: Monday, September 18, 2023 Time Issued: 1800	SHIFT DATE: Tuesday, September 19, 2023
UNIT: Private Lands	SIGNED: <i>Ben Rowland, FBAN</i>

WEATHER SUMMARY:

Local Thresholds – Watch Outs Temp >80°, Min RH < 35%, Winds > 20 mph	Forecast for Today Temp: 94°, Min RH: 25%, Winds: 9 mph Gust 16
---	---

FIRE BEHAVIOR:

With clear skies, temperatures in the mid 90's and RH in the low 20's expect moderate to extreme fire behavior. Fuels are critically dry. **KBDI (776), 100hr FM 10, BI of 23 remains at critical levels above the thresholds for increased fire activity and growth.** Fuel conditions combined with increased winds, especially during the afternoon, have the potential to produce very active fire behavior. Live fuel moistures are critically low (45-55%) and should be treated as fully cured/dead. **Fire Behavior based on values for the fuel models shown.**

Vegetation	Fuel Model	Rate of Spread	Flame Length
Grass/Shrub	GS3	Head 44 ch/hr Flank 5 ch/hr	Head 9 feet Flank 3 feet
Southern Rough	7	Head 36 ch/hr Flank 4 ch/hr	Head 7 feet Flank 2 feet
Timber Litter and Understory	TU2 / TL6	Head 10 ch/hr Flank 1 ch/hr	Head 3 feet Flank 1 feet

Maximum spotting distance **0.1 miles.**

Peak Probability of Ignition = **67%**

In **15 minutes**, a new spot fire or ignition during peak burn conditions in receptive fuels that could reach **5 acres.**

Specific Areas of Concern:

All Divisions: The diminishing heat due to the extensive mop-up, high humidity and moisture have reduced but not eliminated the threat for additional fire movement. Heavy fuels like heavies in drainages, logs and dozer berms will continue to hold heat and provide the ignition source for reburn during the peak burning period. It is very important to keep the needle/cast cleared from all holding lines. Conditions will be favorable for new ignitions. It has been days since we have received southerly winds so northern containment lines may see more risk today.

Tiger Island: Critical to check heat identified on the IR and reburn areas. Monitor the unburned fuels in the drainages and timber stringers. The lower fuel moistures and weather conditions will increase the potential for reburn in the needle/leaf cast.

Hwy 113/ Elizabeth: Critical to check heat identified on the IR and reburn areas. Monitor the unburned fuels in drainages, timber stringers and 10-mile creek.

Lions Camp Road: Monitor fires for hot spots and reburn, especially during mid-afternoon during the peak burn period.

IDA: Check heat identified on the IR and all firelines with needle/leaf cast, especially during mid-afternoon during the peak burn period.

Air Operations:

Generally good conditions. Isolated storms in the afternoon may affect air operations.

Fire Behavior Safety Message:

High pressure means warm dry conditions for the next several days. Expect very active fire behavior to continue. Remember, LCES always even when the fire does not appear to pose any threat to your safety.

HEALTH AND SAFETY MESSAGE

“Working safely may get old but so do the folks that practice it.”

INCIDENT: Tiger Island, Hwy 113,
Lions Camp, Elizabeth Fires

DATE: Sept 19, 2023

Major Hazards & Risks: Air Resources Safety

Retardant (jell, foam), paracargo, and water drops on a fire are routine events. However, there are risks associated with these missions that can pose serious threats to personnel and equipment. Consider the following for all drops you are coordinating:

- Be aware of the location and flight patterns (final approach, drop zone, exit) of aircraft during drop operations.
- Ensure you have positive contact with the pilot before the drop.
- Clear all persons, vehicles, and animals from the danger zone prior to the arrival of the aircraft.
- Beware of streamers or parachutes that do not open.
- Personnel can be injured by the impact of material dropped by aircraft. Clear personnel out of the target area before the drop is conducted. If an individual is caught unaware in a drop zone:
 - Hold hand tools away from your body.
 - Lie face down with hardhat in place and head toward the oncoming aircraft.
 - Grasp something firm to prevent being carried or rolled about by dropped liquid.
 - Do not run unless escape is guaranteed.
 - Get clear of dead snags and tree tops.
 - Be aware of rolling debris below the drop site in steep terrain.
- Use caution when working in an area covered by retardant. Surfaces are slippery.
- Wash the retardant off your skin as soon as possible to prevent irritation.

Take the time to re-assess your situation.

STOP, THINK, TALK....Then ACT

IWI IC Responsibilities – Division Group Supervisor or Point of Contact

- Take charge of the scene – inform the Division Supervisor and Tiger Island Communications that you are the IWI IC and establish radio communications (frequencies, channels). Identify the emergency name – Division A medical, etc.
- **For backup IWI communication, call the communications phone: (804) 807-5821.**
- Assign or begin patient assessment (Medical Incident Report - MIR) and first aid. Request additional medical resources on division/branch or across incident. Transmit MIR patient information to Communications.
- Determine patient transportation through consultation with line medical personnel and Medical Unit Leader. Consider transportation time, risk to personnel, destination facility and available operational resources. If air transport is chosen, implement the plan for alternative transportation in the event aircraft cannot complete the mission. Order transportation resources through Communications as early as possible.
- Notify Communications as resources arrive and any patient status changes. Names of injured or deceased individuals will not be transmitted on the radio.
- Initiate documentation for future investigation; if a line safety officer is available, assign them to lead documentation. Do not move deceased individuals, gear or personal effects except to accomplish rescue work or protect the safety of others. Obtain written documentation of witnesses. Unit Log, ICS 214, may be used for initial documentation, but a narrative will be required.
- As appropriate, conduct an After Action Review to determine successes, areas to improve and lessons learned.

Medical Incident Report

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° - 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° - 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>	
Nature of Injury or Illness & Mechanism of Injury		Brief Summary of Injury or Illness (Ex: Unconscious, Struck by Falling Tree)

4. TRANSPORT PLAN:

Evacuation Location (if different): (Descriptive Location (drop point, intersection, etc.) or Lat. / Long.) Patient's ETA to Evacuation Location:

5. ADDITIONAL RESOURCES / EQUIPMENT NEEDS:

Example: Paramedic/EMT, Crews, Immobilization Devices, AED, Oxygen, Trauma Bag, IV/Fluid(s), Splints, Rope rescue, Wheeled litter, HAZMAT, Extraction

7. CONTINGENCY: Considerations: If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead.

8. ADDITIONAL INFORMATION: Updates/Changes, etc.

REMEMBER: Confirm ETA's of resources ordered. Act according to your level of training. Be Alert. Keep Calm. Think Clearly. Act Decisively.
