27: Values at Risk: include communities, critical infrastructure, natural and cultural resources in 12, 24, 48 and 72 hour time frames: 12 hours: WRC Gameland property, Bushy Lake State Natural Area 24 hours: 306 homes 48 hours: 72 hours:						
28: Critical Resource Needs (amount, type, kind and number of operational periods () in priority order in 12, 24, 48, and 72 hour time frames): 12 hours: 24 hours: 48 hours: 72 hours:						
29: Major problems and concerns (control problems, social/political/economic concerns or impacts, etc.) Relate critical resources needs identified above to the Incident Action Plan. High LVORI tonight may create visibility and respiratory issues. Proposed burnout will create significantly more smoke over several operational periods when conducted. ERC are above 97th percentile and 100hr fuels are at historic lows.						
30: Observed Weather for Current Operational Period Peak Gusts (mph): 8 Max. Temperature: 86 Wind Direction: NE Min. Relative Humidity: 41			31: Fuels/Materials Involved: 4 Chaparral (6 Feet) Bay fuels (Sweet Bay, Wax Myrtle, Loblolly Bay) and Sandridge.			
32: Today's observed fire behavior (leave blank for non-fire events):						

Isolated burning continues within interior of bays and burned out areas. Trees are starting to fall due to peat burned out and allowing reburn. Ground fire continues to progress across unburned peat. Needle drop has begun across site. Poor smoke dispersion.

33: Significant events today (closures, evacuations, significant progress made, etc.):

Improvement of lines and preparation for burnout.

34: Forecasted Weather for next Operational Period Wind Speed (mph): 6 Temperature: 92 Wind Direction: SW Relative Humidity: 52	35: Estimated Control Date and Time:	36: Projected Final Size: 2970	37: Estimated Final Cost:
---	--------------------------------------	---------------------------------------	---------------------------

38: Actions planned for next operational period:

Complete preparations for burnout of area north of burn and south of powerline when weather conditions are conducive. Approximately 1600 ac.

39: For fire incidents, describe resistance to control in terms of:

1. Growth Potential - **High**

2. Difficulty of Terrain - **High**

40: Given the current constraints, when will the chosen management strategy succeed?

Given the current constraints, when will the chosen management strategy succeed?

41: Projected demobilization start date:

42: Remarks:

Warmer and dry conditions have returned with lower humidity making conditions favorable for chance of escape.
