26: Projected incident movement/spread $12,24,48$, and 72 hour time frames:
12 hours:
24 hours: Spread to the north and northeast is possible with southwest wind. Spread in any direction is possible if fire escapes containment due to erratic thunderstorm winds.
48 hours:
72 hours:
27: Values at Risk: include communities, critical infrastructure, natural and cultural resources in 12, 24, 48 and
72 hour time frames:
12 hours:
24 hours: $\mathbf{3 0 6}$ homes, wildlife resources commission property, and Bushy Lake State Natural Area property will be at risk again if fire escapes containment.
48 hours:
72 hours:
28: Critical Resource Needs (amount, type, kind and number of operational periods () in priority order in 12,
24,48 , and 72 hour time frames):
12 hours:
24 hours:
48 hours: replacement engine strike teams
72 hours:
29: Major problems and concerns (control problems, social/political/economic concerns or impacts, etc.) Relate critical resources needs identified above to the Incident Action Plan.
Continued drying of organic soil, fuels are in the 90 th percentile, gusty and erratic
winds are possible with thunderstorm activity. Poor trafficability for access to many sections of the fire due to deep sand and organic soil that becomes very slick with minimal rainfall. The major area of concern on the fire at this time is Division J .

30: Observed Weather for Current Operational Period Peak Gusts (mph): 8 Max. Temperature: 98
Wind Direction: S Min. Relative Humidity: 42

31: Fuels/Materials Involved: 4 Chaparral (6 Feet)
Bay fuels (Sweet Bay, Wax Myrtle, Loblolly Bay) and Sandridge. Fuel model 7 (Southern Rough) is also present.

32: Today's observed fire behavior (leave blank for non-fire events):
Moderate fire activity observed along the fire perimeter with smoldering, creeping, and isolated torching associated with re-burn of cured fuels.
33: Significant events today (closures, evacuations, significant progress made, etc.):
Continued rehabilitation of firelines. A hand held IR flight of fire was conducted this morning to identify hot-spots near containment lines to help focus mop-up activity.

38: Actions planned for next operational period:
Continue holding control lines using engines and tractor plow units. Continue mop-up of hot spots along fire perimeter to maintain containment. Continue rehabilitation efforts. Possible shift of some resources to Division J.

39: For fire incidents, describe resistance to control in terms of:

1. Growth Potential - High
2. Difficulty of Terrain - High

40: Given the current constraints, when will the chosen management strategy succeed?

## Unknown

41: Projected demobilization start date:
42: Remarks:
In addition to the resources listed below, there are 2 NCDFR flex track units, a backhoe, a fulltrack, and a motor grader assisting with suppression efforts on the fire.

43: Committed Resources (Supplemental Committed Resources follow the first block)
