Comments (notes on t	onight's mission and this intern	rotation:	

Comments /notes on tonight's mission and this interpretation:

Fire growth occurred in the northwestern portion of the fire with intense heat occurring on the north end of Poplar Ridge. Multiple fire polygons were mapped in this area not connected to the main perimeter with some fire segments occurring more than ¼ mile from the main heat perimeter. On the western edge of the fire, two spot fires were detected on the west side of Bear Cave Branch. Patches of scattered heat were found in the western 1/3 of the fire, and interior isolated heat sources remain throughout the fire area.
