FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 11	TYPE OF FIRE: Wildfire
FIRE NAME: Maple Springs	OPERATIONAL PERIOD: Day 11/19/16
DATE ISSUED: November 18, 2016	TIME ISSUED: 1955 hrs
UNIT: Nantahala NF	SIGNED: Al Stover - FBAN 

INPUTS

WEATHER SUMMARY: Increased Fire Danger for western North Carolina though Sunday. Strong cold front arriving 0700-0900 hrs will bring cool temperatures and very windy conditions. Sky/Weather: Cloudy with a chance of morning showers, mostly sunny in afternoon. Max Temp: 43-50°. Min RH: 43-50%. Winds: NW 8-20 mph, gusts to 30 mph. Tonight: Min Temp: 22°, Max RH: 86%, Winds: West 5-17 mph, gusts to 30 mph.

See the attached NWS Spot Forecast for more information

FUELS:

The primary carrier of the fire is hardwood litter with some dead/down component. Fuels will remain critically dry until significant precipitation is received. All fuels are readily available to burn and be receptive to ignition. Heavy fuels will burn until consumed or extinguished. Leaf fall is in progress and contribute to a high resistance to control. Drought conditions will allow for deep organic material to hold heat and require extensive mop up. KDBI values over 700 are common.

OUTPUTS - FIRE BEHAVIOR

GENERAL: Expect potential active fire behavior on any uncontained fire line, escapes or new starts.

Fuel conditions and steep terrain will cause control problems even with light winds and moderate RH's. Terrain may cause locally erratic winds and strong uphill runs will occur. Fire spread can be influenced more by the wind on exposed ridges. Where sheltered fire behavior is driven by topography & fuels. Flame lengths of 3-6 ft. with rates of spread around 15-20 ch/hr. are likely with any head fire, higher when on steep slopes or under windy conditions. Low-Moderate flame lengths/spread rates when backing or flanking. Expect prolific short range spotting. Fire will remain active well into the night.

SPECIFIC: Significant wind test of the fire lines today.

DIV E/Z – Isolated heat well in the interior.

DIV N – Potential fire activity in Little Santeetlah drainage. The fire continues to hold with only isolated heavy fuels burning. Winds will funnel down the drainage with increased wind speeds.

DIV X – Potential spread in upper Deep Creek with creeping/smoldering. Recently burned areas could hold heat in heavy fuels and organic soil. The area of highest concern may be somewhat sheltered from the wind.

DIV CC – Indications are that there is little or no heat left.

AIR OPERATIONS: Gusty, strong winds in complex terrain may hamper air operations.

SAFETY: Don't let the colder conditions lull you into a false sense of security. Even if we get some rain, it will not be enough to prevent fire spread, especially in heavy fuels. This fire has demonstrated active fire behavior at night, with temps in the 40's and humidity in the 70% range. Rates of spread may increase with the wind driving spread direction. With the high winds, snags will fall and there is the potential for new starts if a tree takes down a powerline.

Base all action on current and expected fire behavior
