

Oak Fire

AZ-CNF-000670/P3H56L (0305)

Incident Action Plan
Day Operational Period
July 2, 2014

INCIDENT OBJECTIVES		1. Incident Name Oak	2. Date 07/1/2014	3. Time 1600
4. Operational Period 07/02/2014 DAY 0630-2000				
5. General Control Objectives for the Incident (include alternatives)				
<ol style="list-style-type: none"> 1. Provide for firefighter, aviation, and public safety. 2. Prevent fire from spreading to private lands and protect historic structures. 3. Try to contain fire activity within the Coronado National Forest Boundary. 4. Manage this natural ignition fire to improve wildlife habitat and forage; improve rangeland conditions; watershed conditions; improve forest health. 5. Minimize fire severity impacts to T&E habitat (i.e. Chiricahua Leopard Frog, Mexican spotted owl). Try to maintain buffer zones to trap sediment. 6. Utilize Minimum Impact Suppression Tactics (MIST) when conducting fire management operations in the Wilderness. 7. Work with media outlets and social media tools to provide the public timely and accurate information. 				
6. Weather Forecast for Period

DISCUSSION...THERE WILL BE A VERY SLIGHT CHANCE OF A THUNDERSTORM AT THE FIRE SITE TONIGHT...WITH ISOLATED THUNDERSTORMS WEDNESDAY AFTERNOON AND EVENING. MOISTURE WILL THEN INCREASE SIGNIFICANTLY THURSDAY INTO THE UPCOMING WEEKEND. THE INCREASED MOISTURE WILL LEAD TO HIGHER RELATIVE HUMIDITIES...AS WELL AS A GOOD CHANCE OF AFTERNOON AND EVENING SHOWERS AND THUNDERSTORMS THURSDAY AND FRIDAY. EXPECT STRONG...GUSTY AND ERRATIC WINDS WITH ANY THUNDERSTORM.

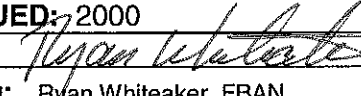

.TONIGHT...

SKY/WEATHER.....PARTLY CLOUDY. A SLIGHT CHANCE OF AN EVENING THUNDERSTORM.
MIN TEMPERATURE.....72 TO 75 DEGS.
MAX HUMIDITY.....28 TO 31 PCT.
20-FOOT WINDS.....NORTHWEST 10 TO 15 MPH WITH GUSTS TO AROUND 25 MPH EARLY IN THE EVENING...DIMINISHING TO 5 TO 10 BY LATE EVENING AND THEN BECOMING LIGHT AT 2 TO 7 MPH OVERNIGHT.
LAL.....2.
CHANCE OF RAIN.....10 PERCENT.
HAINES INDEX.....4 LOW.

.WEDNESDAY...

SKY/WEATHER.....PARTLY CLOUDY. ISOLATED SHOWERS AND THUNDERSTORMS IN THE AFTERNOON AND EVENING.
MAX TEMPERATURE.....93 TO 96 DEGS.
MIN HUMIDITY.....12 TO 15 PCT.
20-FOOT WINDS.....LIGHT WIND 2 TO 7 MPH THROUGH MID MORNING BECOMING NORTHWEST TO NORTH 7 TO 12 MPH BY LATE MORNING AND CONTINUING THROUGH THE AFTERNOON. GUSTS TO AROUND 22 MPH IN THE AFTERNOON. WIND SHIFTING TO THE EAST/SOUTHEAST AT 10 TO 15 MPH WEDNESDAY EVENING. STRONG...GUSTY AND ERRATIC WINDS NEAR ANY THUNDERSTORMS.
LAL.....3.
CHANCE OF RAIN.....20 PERCENT.
HAINES INDEX.....5 MODERATE.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 5	TYPE OF FIRE: Wildfire
FIRE NAME: Oak	OPERATIONAL PERIOD: Day 7/2/2014
DATE ISSUED: 7/1/2014	TIME ISSUED: 2000
UNIT: Coronado Nat'l Forest, Safford RD	SIGNED: 
	Typed/printed: Ryan Whiteaker, FBAN

INPUTS

WEATHER SUMMARY:

Temp: 93-96, RH: 12-15%; Winds: NW to West 7-12 mph by late morning through the afternoon with gusts up to 22 mph. Shifting to the E/SE to 10-15 Wednesday evening. Gusty and erratic near any storms. Haines of 5, Moderate.

OUTPUTS

FIRE BEHAVIOR

GENERAL: The fire activity throughout the fire has been slope and fuels driven. The instability associated with the high Haines has aided in an increase in fire activity on those days. Most of the active fire growth days have been days of high Haines and in areas that have aligned. This is either from roll out or fire that has backed down slopes and then aligned. There have been some days that pretty large areas have been consumed but a good portion of the alignment runs have been small isolated slopes. Fuels are very dry in the area and very receptive to ignition. There is also a large component of dead and or dead and down fuels in the entire mountain range. This is in large part to the drought and the heavy freeze in 2011 that killed or set back a large number of oak trees in Southern AZ. Leaf drop could also be contributing to backing fire spread. Any outflow winds from approaching thunderstorms could cause rapid rates of spread in all directions anywhere that heat and open flame is present. Any new starts could see rapid rates of spread as well.

The fuel moisture readings are: 1000 hrs are 3% at noon creek and 7% in Shake Trail. The 100 hour fuel moistures in the same sample sites are in the very low single digits. Live fuel moistures are 87% in the Manzanita, 92% in the Juniper, 93% in the Emery Oak and 88% in the AZ White Oak. The burning period tends to be 0900 to 2000- 2200 at most elevations although it has started as early as 0700 and go well into the night.

ROS: 40-50 ch/hr. FL: brush 5-10 feet. Higher with alignment.
PIG:100%

SPECIFIC:

DIV U: The fire will continue to back its way down towards Rattlesnake Canyon. The best potential for the fire to make into Rattlesnake is backing down Corral Canyon. If it gets down into the bottom of Rattlesnake it has plenty of potential to continue to move to the west and north and threaten the cabins in the bottom of the canyon. Be aware that the fire could get seated in the canyon and gain alignment.

DIV T: The fire will continue to back down some of the east facing slopes up high and make some short uphill runs. Most of this will be up high on the slopes. This portion of the fire has been the earliest piece to show fire activity due to the sun hitting those slopes and warming them first.

DIV V: Backing fire with the upslope runs will be the activity here today. Once the fire backs down and lines up with wind and slope there will be short runs. This could be intense for a short duration.

AIR OPERATIONS: Expect more cloud build up this afternoon. Turbulence will increase with these clouds and outflow winds could be very strong. Strong daytime heating and uplifting will cause some turbulence increase as well. Air craft availability may be limited in the afternoon along with increased buildup.

SAFETY.

Better potential today for thunderstorms. Outflow winds could cause some issues if a cell passes over the fire. This time of year rains can be short duration but high intensity.

"He once wrestled with Danger, Danger got clingy."
The Most Interesting Man in the World

Oak Incident General Weather Outlook

For Planning Purposes Only, see the IAP for the Official Forecast

Forecast made 1 JULY/1800 - Fire Weather Forecaster, Tucson NWS Carl Cerniglia

Day	Wed	Thu	Fri	Sat	Sun	Mon
	2-Jul	3-Jul	4-Jul	5-Jul	6-Jul	7-Jul
Clouds @ 1500 (%)	40	60	65	60	55	50

Health and Safety Message

It's better well done than well said

Driving:

The roads are deteriorating so pay close attention to defensive driving with seat belts and lights on. Roads can be steep, rocky and rough on tires, so slow down. If you have doubts about a section of road, scout it out or try a different route.

Communication

Establish and test the communication system, including Tac, Command, and Air/Ground channels before you need them. There will be dead spots caused by elevation and topographical features so use human repeaters if necessary. Cell phone coverage may be poor, spotty or non-existent.

Accident/Injury Procedures

In your daily safety sessions, practice "What if..." scenarios about how you would medevac a serious injury from your location. Review section 8 of the ICS 206 (Medical Plan) and pages 108 & 109 in your IRPG.

Dehydration

Hydrate, Hydrate, Hydrate. Daytime temperatures will be in 90 to 100 degree range and dehydration is a high risk factor. Drink plenty before, during and after your shift. The recommended mix is 3:1 (water to sports drink). Review IRPG p. 45 on heat-related injuries. And remember, a firefighter most likely will not recognize they are in distress so keep an eye on each other – that's the essence of teamwork.

Terrain / Foot Travel:

Steep rocky slopes with loose rock and dirt can cause several injuries. Pick your travel routes carefully, maintain your spacing, take your time, and watch your footing.

Snakes & Biting Critters

We got 'em so watch where you step, sleep, sit, etc. Use flashlights at night. See the medic if you get hit; don't wait, it'll only get worse.

Safety Officers: John McGee, Steve Hensel, Damon McRae

8. Medical Emergency Procedures										
In the event of a medical emergency the On-scene IC will provide the following information to Dispatch:										
1. Declare the nature of the emergency.										
a. Medical injury/illness? If injury or illness is Life threatening? (Medical transport vs. Medical Emergency).										
2. If Life threatening, request that the designated frequency be cleared for Emergency traffic.										
3. Identify an On-scene Incident Commander by Last Name (i.e. Jones).										
4. Identify nature of the incident, number of injured, patient assessment(s), and location (geographic and GPS)										
5. identify On-scene medical personnel (i.e. Smith).										
6. Identify preferred method of patient transportation from scene.										
7. Request any additional resources and/or equipment needed.										
8. Document all information received and transmitted on the phone and radio.										
9. Identify any changes in the On-scene IC or Medical personnel as they occur. <u>REFER TO IRPG PG. 108-109</u>
