## FIRE WEATHER FORECAST

**FORECAST NO. 1**

**NAME OF FIRE:** Whitetail/Sawmill

**UNIT:** San Carlos Agency

**TIME AND DATE**

**FORECAST ISSUED:** 2150 MST 06/22/15

**PREDICTION FOR:** DAY SHIFT

**SHIFT DATE:** 06/23/15 Tuesday

**SIGNED:** Mark Stubblefield *MS*

**Fire Weather Meteorologist**

---

**WEATHER DISCUSSION:** High pressure over Arizona will continue to slowly move east this week. This will allow moisture over Mexico to move north and westward over the next few days. High temperatures will slowly go down as the RH values go up. Chances of shows and thunderstorms will also increase this week. The main threat from thunderstorms will be strong and gusty winds because of the relatively dry surface layers.

---

#### Fuels/Fire Potential

**Moderate Risk conditions likely peaking through the first half of next week.** Fire potential still lagging a bit due to the abundant moisture this spring but it will increase quickly into early next week. Very warm/hot temperatures and low RH values have arrived across the western 2/3 of the region and will attempt to spread even further eastward through this weekend. **Near record-record high temps are possible. High Haines values, low RH values, hot temperatures, and poorer overnight recovery values are in store from today into early next week.** Signs of a tropical easterly wave remain intact around TUE/WED of next week. This will lead to an increase in RH values as well as increasing areas of wet shwrs/tstms across about the southeastern 1/2 or so of the region by the mid-late part of next week
