FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 4	TYPE OF FIRE: Wildfire
FIRE NAME: Cedar	OPERATIONAL PERIOD: Sunday, June 19, 2016, DAY
DATE ISSUED: June 18, 2016	TIME ISSUED: 2000 hrs
UNIT: AZ-FTA	SIGNED: Holly P. Kleindienst FBAN/LTAN

INPUTS

WEATHER SUMMARY:

SUNDAY VERY HOT AND VERY DRY. Inversion and smoke lifting after 1000 hrs. Light winds favoring N-NW

- Max temps... mid-slope 90-95 F valley 94-99 F
- Min humidity... mid-slope 7-10% valley 5-8%
- Winds... NE in the morning, then NW 5-10 mph. Afternoon gusts 12-15 mph at ridge tops and open areas.
- Haines Index... 6 (High)

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Fire activity will be directed primarily by terrain driven winds.
- Light northerly winds will somewhat increase head fire behavior on active edge in DIV B, S, and Q. Individual and small group torching should be expected, as well as short duration runs when winds align with uphill slopes, or across exposed flats. Short range spotting up to ½ mile is possible from ridgeline torching.

SPECIFIC:

- DIV A & B – Light northerly winds will allow for continued securing of lines, and good visibility for locating and mitigating potential threats to the line.
- DIV S & Q – Open edge of fire will continue to actively burn to the south, with moderate rates of spread. Expect rates of spread between 1-7 ch/hr (1-7 ft/minute). With wind gusts, rates of spread could increase to 12 ch/hr, or higher if there is a brushy understory. Spotting will be short range at less than 0.2 miles. Isolated torching and short duration runs up side canyons should be expected. “Munching” is a good adjective for the expected fire behavior, as seen in previous shifts.
- DIV Z – Light northerly winds will wind test any potential threats to the line.

AIR OPERATIONS:

- Wind and temperature should be favorable for air operations over the fire.
- Smoke may limit air operations on all flanks of the fire until diurnal warming lifts smoke from surface.
- Expect VFR conditions on the north and west flanks of the fire, though smoke may limit air operations over the south end of the fire in Division Q and Division S.

SAFETY

ERC is at the Peak of the local fire season, when many large fires in the Southwest have exhibited unexpected, short term, high impact fire events.

Haines index is a pronounced 6 (High). Increased INSTABILITY combined with MODERATE FIRE ACTIVITY, and LOW WINDS can lead to plume driven fire activity which can rapidly push active fire in any, or every direction. Watch for signs of this rarely occurring phenomena including great stillness, and/or developing pyrocumulus.

The best response to suspected developing plume dominated fire behavior is to disengage to an unburnable area until the pyrocumulus breaks down. A loss of productivity for an hour or two far outweighs the loss of a firefighter during the rare event of a pyrocumulus collapse.

INCIDENT Weather Forecast

FORECAST NO: 04
 PREDICTION FOR: Sunday Day Shift
 SHIFT DATE: June 19, 2016
 TIME AND DATE
 FORECAST ISSUED: 2000 June 18, 2016

NAME OF FIRE: Cedar
 UNIT: Fort Apache Agency

Incident Meteorologist: Tom Bird
 Cell#: 240-778-5276

Weather Discussion: ...Record Heat and exceptional dryness Today...fire weather CRITICAL...
 ...Predominant Winds from the NORTH today...

Today should be the HOTTEST and DRIEST of the incident as high pressure centers overhead. Expect a change in the winds today. Winds will be mostly light, but from the north/northwest instead of the SW we've been seeing. With lighter NW winds light expect a lot of variation in wind direction and speed over the fire due to terrain influences. Haines will remain 6 (HIGH). Thus very unstable and very dry conditions keep potential for large fire growth this afternoon. The region remains hot Monday but a little moisture begins to sneak in. A few more clouds, with a slight improvement in RH...and maybe a stray shower/storm late. More moisture moves in Tuesday through Thursday to further lift RH levels. Clouds will build with slight chances for showers and Thunderstorms both afternoons/evenings.

Weather Forecast Sunday:

Weather.....Very HOT and very dry. Mostly sunny with just a few clouds. Inversion and smoke lifting after 1000 hrs. Lighter wind favoring N-NW.

Lal.....1 *(hydrate...shade...hydrate)*
Chance of Rain.....0%

Weather Forecast Sunday Night:

Weather.....Mostly Clear. Meager RH recoveries. Strong thermal belt developing between 6400-6800 ft. el. Cool valleys/mild ridges. Drainage will trap thick smoke in valleys.
Min Temperatures....Valley bottoms: 55-60. Slopes and ridges: 61-66.
Max Humidity.....Valley bottoms: 25-30%. Slopes and ridges: 18-23%.
Winds (20FT).....Becoming light and variable...favoring southeast after sunset. Downslope/Down-valley winds 3-5 mph after midnight.

Safety Message

6-19-2016 Day Shifts

L.C.E.S is built on two basic guidelines:

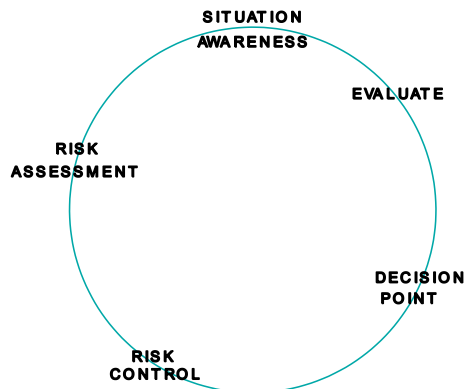

1. Before safety is threatened, each firefighter must be informed on how the **L.C.E.S** system will be used.
2. The **L.C.E.S** system must be continuously reevaluated as fire conditions
 - Conduct quality briefing on the line before tactical engagement, so **everyone KNOWS** the plan.

Weather & Fire Behavior:

Are you prepared for predicted fire behavior as forecasted?

Have you planned for the possibility of more severe weather or fire behavior?

Medical Incident Report

Human Resource Message

Human Resource Specialist has arrived on the incident!!!

My role is to be a focal point for informal resolution of issues and concerns involving discrimination or harassment. I will also serve as an open and empathetic channel through which individuals assigned to this fire can raise questions, discuss concerns, and get answers about an aspect of their work environment—be it practices, policies, operating procedures, facilities, or work conditions.

If you need to talk about a concern please contact me at the HRSP office or by phone/text. My office is located at the end of the “Green Parkway” next to Safety.
