OUTPUTS

GENERAL FIRE BEHAVIOR:

- Cedar fire activity will continue to decrease with increasing humidity and cloud cover. No perimeter growth is expected.
- Flame lengths and rates of spread should be conducive to rapid containment and control of new starts.

SPECIFIC FIRE BEHAVIOR:

In the unlikely event of a spot fire exposed to winds, or for a new Initial Attack:

- **Flame Length:** Pine 1-1.5 ft PJ 4-7 ft
- **Rate of Spread:** Pine 1-3 ch/hr (1-3 ft/min) PJ 5-14 ch/hr (5-14 ft/min)
- **Spotting Distance:** short range

AIR OPERATIONS:

- VFR conditions expected in the morning.
- Expect gusty and erratic winds in the vicinity of thunder cells.

SAFETY

REVIEW THUNDERSTORM SAFETY IN THE IRPG P. 21.

WHAT IS YOUR ESCAPE ROUTE IN THE EVENT OF A FLASH FLOODING?

- Turn Around, Don't Drown! ®
 - Avoid walking or driving through flood waters.
- Just 6 inches of moving water can knock you down, and 2 feet of water can sweep your vehicle away.
- If there is a chance of flash flooding, move immediately to higher ground. Flash floods are the #1 cause of weather-related deaths in the US.
- If floodwaters rise around your car but the water is not moving, abandon the car and move to higher ground. Do not leave the car and enter moving water.

Cedar Fire 6/27/16 Day

Safety Quote for the day:

“Don’t stand too close to the person who is always bandaged up.”

DRIVING to and from incidents is a HAZARDOUS TASK Insure the driver is alert and capable of performing the task safely.

LIGHTS ON WHILE DRIVING, IN DUST AND SMOKE WILL INCREASE YOUR VISIBILITY. ALWAYS DRIVE DEFENSIVLY!

FATIGUE: at the end of an assignment, fatigue becomes apparent. Some of the things we can do to mitigate the effects of fatigue: (a) take short breaks during the day-especially when feeling tired, (b) drink enough water to keep your system “flushed out”, (c) eat a balanced diet-watch out for too much consumption of sugars and caffeine, (d) get as much sleep as possible, and (e) maintain your personal hygiene.

You were challenged with a difficult task and you met the challenge with Professionalism and above all, you did it safely. When you leave this incident to another, take with you that positive attitude for safety, continue the tailgate safety session and continue to communicate.

Thank you from your Safety Team: M.Gillespie SOF1 Don Muise

BIA Suppression Rehabilitation Standards

The following actions must be taken by the IMT1 to rehabilitate the immediate impacts from suppression efforts:

1. Rehabilitate dozer lines by pulling in berms and randomly scattering previously cut brush onto the fire lines to eliminate the appearance of a travel way and minimize future access. Get clearance from the Ops Section Chief before brush is pulled back into the dozer and fire lines. Coordinate with Agency Resource Advisors to avoid disturbance of cultural sites.
2. Cross slope dozer lines should be restored to original contour, as conditions allow.
3. Construct water bars along fire line slopes as follows:
 - Approximately every 150 feet for slopes 10-15%
 - Approximately every 100 feet for slopes 15-25%
 - Approximately every 75 feet for slopes greater than 25%
4. Brief operators and supervisors of potential for sparking due to travel of tracked machinery over rock and blade strikes. If significant sparking is occurring, have adequate suppression forces on hand.
5. When hand lines are no longer needed, rehabilitate and obliterate constructed hand lines by pulling in berms and randomly scattering previously cut brush onto the fire lines
6. Cut all snags along roadways that pose an immediate threat to firefighter and public safety.
7. Pick up all trash along fire lines, spike camps, drop points, staging areas and at helispots.
8. Identify needs for revegetation or other mitigation on and adjacent to fire lines, spike camps, drop points and staging areas.
9. Close down Helibase including trash pickup in and around the perimeter of the base. Assess site impacts for revegetation or other mitigation.
