## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 004	<b>TYPE OF FIRE:</b> Wildfire Full Suppression
<b>FIRE NAME:</b> Luna Fire	<b>OPERATIONAL PERIOD:</b> 10-25-20 24hr
<b>DATE ISSUED:</b> 10-24-20	<b>TIME ISSUED:</b> 2100
<b>UNIT:</b> NM-CAF-000631	<b>SIGNED:</b> <i>Matt Brown</i> 
<b>Typed/printed:</b> Matt Brown FBAN(t)	

### INPUTS

**WEATHER SUMMARY:**

Temperature: 45-55 daytime, 35-40 overnight RH: 25-30% daytime, 100% overnight  
 Ridge-top Winds: W 13-16 gusts to 25 mph by 1400 hrs  
 Valley Winds: Valley 5-8 mph with gusts to 20 by 1400 hrs. Overnight SSE 13-16mph  
 Light Rain expected by 1300 with snow by 1700 hrs.

### OUTPUTS

**FIRE BEHAVIOR**

**GENERAL:**

The west winds will pressure the northern and eastern divisions especially in southwest aligned drainages. West winds will continue to cause the fire to flank into Bull Canyon where fuels are continuous. Fuels have continued to dry with the high winds and low RH. The ERCs are setting records with numbers that are 25% above previous records. The mixed conifer is predominately short needle or compact litter mixed with small hardwood leaf litter. The compactness of the litter resists fire spread until alignment of solar drying, high wind, and open exposed canopy. However, when these conditions align they can produce moderate to rapid rates of spread. Spotting has been observed up to 1/2 mile. Probability of Ignition will be 50%; 30% if shaded with a reduction in rates of spread and flame lengths. Forecasted precipitation will reduce fire behavior to smoldering and creeping.

**SPECIFIC:**

**Divisions A/C/E:** These divisions will experience favorable winds for most of the shift. Drainages in these divisions will continue to fill in slowly as fire backs into the drainage bottoms and into wind sheltered areas. Interior islands and isolated concentrations of heavy dead and down will continue to consume only when fuels dry out from good overnight humidity recovery.

**Division G/O/Z:** These divisions will experience adverse west wind conditions. The northern perimeter of the fire will have the most concentrated heat and spread potential into aligned drainages. Fire will continue to flank into the very top Bull canyon inside the forest boundary as it enters a wind sheltered drainage that runs perpendicular to the forecasted wind direction. Fire spread on the south end of Bull Canyon has good spread potential in the continuous fuels. Fire will continue to move up Cuchillo de Fernando and wrap around in the continuous conifer fuels layer.

**Mixed Conifer High Load (TU5) 6% Fine Dead Fuel Moisture**

Mid Flame Winds Speed	Head Fire Flame Length	Heat Fire Rate of Spread
5	6-9 ft	8-12 ft/min
10	8-12 ft	20-25 ft/min
15	10-15 ft	30-35 ft/min

**AIR OPERATIONS:**

Smoke will be mixed out by daybreak from the wind impacts in the early morning. This will also mix out any inversions. Chance of freezing precipitation will have an adverse impact on air operations especially after 1300 hours.

### SAFETY

Expect increased fire behavior in south west aligned drainages early in the shift. Watch for fire weakened trees especially if freezing precipitation accumulates on the trees.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.
