Transportation - Ground	Motor Vehicle Accident-All Causes: visibility, other vehicles, pedestrians, bicycles, wildlife, road surface, livestock.	Likely	Critical	Extremely High	Local roads can be narrow with little to no shoulder, present blind corners and hills, soft ground and stream crossings requiring 4x4 use. Rain is causing many roads to become extremely slippery, delay driving until roads dry out. Local highways (I-17, Cave Creek Road, Bartlett Lake Road, and others) have heavy weekend recreation traffic. Minimize or eliminate distractions within your vehicle, adhere to driving policy, work rest policy, duty day limitations. Maintain vehicle readiness: clean windows, use headlights day & night, seatbelt use, take frequent breaks during long drives, obey posted speed limits, use backbrakes if available. If a motor vehicle accident (MVA) occurs refer to IRPG page 35 for mitigations. Don't use cruise control on wet paved roads.		Possible	Critical	High	YES	All Drivers
All Incident Operational Tasks	Weather - Lightning	Unlikely	Catastrophic	High	Consider lightning for all incident actions / operations, review IRPG page 21 for mitigations. Seek buildings with electrical wiring or indoor plumbing, if unavailable seek a hard top vehicle, if unavailable don't be the tallest point on the ground. Avoid grouping together, crouch if your hair stands on end. Monitor radio for IMET updates related to adverse WX, monitor radar apps on cell phone/ tablet. Request a spot WX Forecast, refer to IRPG page 65-66.		Rare	Catastrophic	Moderate	NO	All Personnel
All Incident Operational Tasks	Weather - Flash Flooding	Unlikely	Catastrophic	High	Consider Flash Flooding for all incident actions. Stay informed about flooding conditions in your area. ... Don't try to walk through a flooded area. ... Avoid flooded areas if you are in a vehicle. ... A stalled car should be abandoned immediately. ... Evacuate a flooded area immediately if instructed to do so.		Unlikely	Critical	Moderate	NO	All Personnel
All Incident Operational Tasks	Electrocution - Power lines	Unlikely	Catastrophic	High	Review IRPG page 24 for mitigations. Treat all powerlines as energized.		Rare	Catastrophic	Moderate	YES	Division Supervisors
Aviation Operations - Bucket Work, Retardant Longline, Medevac, Aerial Recon, Troop Shuttle	Powerlines	Unlikely	Catastrophic	High	Review IRPG page 25 (Aerial Tactics) & page 50 (Helicopter Landing Areas). Never assume helicopter pilots know about wires, always advise of known aerial hazards.		Rare	Catastrophic	Moderate	YES	All Operations Personnel Division Supervisors ATGS
All Incident Operational Tasks	Medical - Delay In Providing Advanced Life Support	Possible	Critical	High	Provide Advanced Life Support, near any operational work locations. Scout for and identify potential helispots and obtain approval for use (pilot & manager required prior to placing on maps)		Unlikely	Critical	Moderate	YES	Division Supervisors
Transportation - Ground - UTV	Human Factors - Experience & Training	Possible	Critical	High	Evaluate if UTV use is justified (utilize Risk Assessment Tool card (RAT card). Utilize trained and certified drivers only, drive at reasonable and prudent speeds, follow your agency policy regarding PPE use to minimize injury potential. Avoid driving or riding on public roads which increases the possibility of an accident. Reference Chapter 14 of the 2021 Red Book page 310, UTV head protection for wildland fire operations. Avoid driving through running water (Deep Running Water).		Unlikely	Critical	Moderate	YES	UTV operators Division Supervisors
Transportation - Ground - UTV	UTV Rollover / Accident	Possible	Critical	High	Maintain overall weight within manufactures limits, do not overload UTV. Avoid aftermarket roof racks that change the C/G of vehicle. Conduct daily PM checks (T-CLOC). Only qualified operators to drive UTV's. Operate within your skill limits. Drive at reasonable speeds and avoid travel on side slopes. No cross country travel.		Unlikely	Critical	Moderate	YES	UTV Operators Medical Section
Aviation Operations - Medevac, Aerial Recon	Aircraft Mishap - General	Rare	Catastrophic	Moderate	Refer to IRPG Aviation User Checklist page 45 (blue section) and Emergency Medical Care (pink section) sections, especially pages 50-54, 57, 62, 116-117. Review and train on the Helicopter LZ Brief to improve communications between ground and pilot. Ensure area or line is cleared prior to water or retardant drops, provide immediate feedback to pilots as to effectiveness of drops.		Rare	Catastrophic	Moderate	YES	Division Supervisors
Initial Attack	Entrapment - Any Cause	Unlikely	Critical	Moderate	Ensure 10- 18 are reviewed, ensure LCES is reviewed and in place.		Rare	Critical	Moderate	YES	Division Supervisor
Saw Usage	Chainsaw - Gysering / Injury	Unlikely	Critical	Moderate	Review causes for gysering and anticipate occurrence, minimize possibility of gysering to occur, provide proper trauma kits near saw operations.		Rare	Critical	Moderate	YES	Division Supervisors Sawyers and Swampers
Transportation - Ground-ATV	ATV Rollover / Accident	Unlikely	Critical	Moderate	Evaluate if ATV use is justified (utilize Risk Assessment Tool card (RAT card). Utilize trained and certified riders only, ride at reasonable and prudent speeds, follow your agency policy regarding PPE use to minimize injury potential, avoid driving or riding on public roads which increases the possibility of an accident. Reference Chapter 14 of the 2021 Red Book page 310, ATV head protection for wildland fire operations. Avoid driving through running water (Deep Running Water).		Rare	Critical	Moderate	YES	ATV Operators Division Supervisors
All Incident Tasks	Allergic Reaction - Insects/Animals	Possible	Moderate	Moderate	Identify individuals with known allergic reactions, make epi-pen locations known, communicate and flag known bee locations. Watch for snakes and scorpions in work, rest, and sleeping areas. Coordinate with ALS on your Division Supervisor.		Unlikely	Moderate	Low	YES	All Personnel Medical Unit
Transportation - Ground	Slips/Trips/Falls - Steep Terrain, Unstable Surface	Possible	Moderate	Moderate	Communicate hazards while hiking, watch footing while on steeper ground, minimize working above others while on slopes.		Unlikely	Moderate	Low	YES	Single Resource Bosses
